

DC/DC converter
Input 36-72 Vdc
Output up to 15A/60W

- *Size 74.7x63.5x11.0 mm (2.94x2.50x0.433 in.)*
- *Efficiency typ 86% (5 V) at full load*
- *1500 Vdc isolation voltage*
- *MTBF >200 years at +75 °C case temperature*
- *Rugged mechanical design and efficient thermal management, max +100 °C case temperature*
- *EMI measured according to EN 55 022 and FCC part 15J*

The PKG series of DC/DC converters are members of the EriPower™ range of DC/DC converters for distributed power architectures in 48/60 VDC power systems. They provide up to 60W in single and dual output versions.

The PKG units can be used as on-board distributed power modules, or serve as building blocks for more centralized power boards. The high efficiency makes it possible to operate over a wide temperature range without any extra heatsinks. At forced convection cooling >200 lfm (1 m/s), the PKG units can deliver full power without heatsinks up to +65°C ambient.

With derated output power it can also operate in temperature controlled environments with non-forced convection cooling. By adding external heatsinking,

the temperature range can be extended even further. Thanks to its peak power capability, the PKG series is ideal for applications where max power is only required during short durations e.g. in disc drives. The PKG series uses ceramic substrates with plated copper in order to achieve good thermal management, low voltage drops, and a high efficiency. These products are manufactured using highly automated manufacturing lines with a world-class quality commitment and a five year warranty. Ericsson Power Modules AB is an ISO 9001/14001 certified supplier.

General

Absolute Maximum Ratings

Characteristics		min	max	Unit
T _C	Case temperature @ max output power	-45	+100	°C
T _S	Storage temperature	-55	+125	°C
V _I	Input voltage	-0.5	+80	Vdc
V _{ISO}	Isolation voltage (input to output test voltage)	1500		Vdc
V _{RC}	Remote control voltage pin 1	-10	+10	Vdc
V _{adj}	Output adjust voltage pin 10	-10	+10	Vdc

Stress in excess of Absolute Maximum Ratings may cause permanent damage. Absolute Maximum Ratings, sometimes referred to as no destruction limits, are normally tested with one parameter at a time exceeding the limits of Output data or Electrical Characteristics. If exposed to stress above these limits, function and performance may degrade in an unspecified manner.

Input T_C < T_C max

Characteristics		Conditions	min	typ	max	Unit
V _I	Input voltage range ¹⁾		36	72		V
V _{loff}	Turn-off input voltage			32		V
V _{lon}	Turn-on input voltage			33		V
I _{IRush}	Equivalent inrush current resistance			30		mΩ
C _I	Input capacitance			1.8		μF
P _{li}	Input idling power	I _O =0, T _C = -30...+90°C		1.5	2.0	W
P _{RC}	Input stand-by current	V _I = 53 V, T _C = +25 °C RC connected to pin 4		1.0		W

Environmental Characteristics

Characteristics	Test procedure & conditions		
Vibration (Sinusoidal)	IEC 68-2-6 F _C	Frequency Amplitude Acceleration Number of cycles	10...500 Hz 0.75 mm 10 g 10 in each axis
Random vibration	IEC 68-2-34 E _d	Frequency Acceleration density spectrum Duration Reproducibility	10...500 Hz 0.5 g ² /Hz 10 min in 3 directions medium (IEC 62-2-36)
Shock (Half sinus)	IEC 68-2-27 E _a	Peak acceleration Shock duration	200 g 3 ms
Temperature change	IEC 68-2-14 N _a	Temperature Number of cycles	-40°C...+125°C 100
Accelerated damp heat	IEC 68-2-3 C _a with bias	Temperature Humidity Duration	85°C 85% RH 1000 hours
Solder resistability	IEC 68-2-20 T _b 1A	Temperature, solder Duration	260°C 10...13 s
Resistance to cleaning solvents	IEC 68-2-45 XA Method 1	Water Isopropyl alcohol Terpens Method	+55 ±5°C +35 ±5°C +35 ±5°C with rubbing

Safety

The PKG 4000 I Series DC/DC converters are designed in accordance with EN 60 950 Safety of information technology equipment including electrical business equipment and certified by SEMKO. The isolation is an operational insulation in accordance with EN 60 950.

The PKG DC/DC converter are re-recognized by UL and meet the applicable requirements in UL 1950 Safety of information technology equipment, the applicable Canadian safety requirements and UL 1012 Standard for power supplies.

The DC/DC converter shall be installed in an end-use equipment and is intended to be supplied by isolated secondary circuitry and shall be installed in compliance with the requirements of the ultimate application. When the supply to the DC/DC converter meets all the requirements for SELV (<60Vdc), the output is considered to remain within SELV limits (level 3). If connected to a 60 V DC power system reinforced insulation must be provided in the power supply that isolates the input from the ac mains. Single fault testing in the power supply must be performed in combination with the DC/DC converter to demonstrate that the output meets the requirement for SELV. One pole of the input and one pole of the output is to be grounded or both are to be kept floating.

The terminal pins are only intended for connection to mating connectors of internal wiring inside the end-use equipment.

These DC/DC converters may be used in telephone equipment in accordance with paragraph 34 A.1 of UL 1459 (Standard for Telephone Equipment, second edition).

The isolation voltage is a galvanic isolation and is verified in an electric strength test. Test voltage between input and output and between case and output is 1,500 Vdc for 60 s. In production the test duration may be decreased to 1 s.

The capacitor between input and output has a value of 4.7 nF (duals = 22 nF) and the leakage current is less than 1 A @ 50 Vdc.

Flammability ratings of the terminal support and internal plastic construction details meets UL 94V-0.

Note:

¹⁾The input voltage range 36...72 V meets the requirements in the European Telecom Standard prETs 300 132-2 for Normal input voltage range in 48 V and 60 V DC power systems, -40.5...-57.0 V and -50.0...-72.0 V respectively. At input voltages exceeding 72 V (abnormal voltage) the power loss will be higher than at normal input voltage and T_C must be limited to max +90°C. Absolute max continuous input voltage is 80 Vdc. Output characteristics will be marginally affected at input voltages exceeding 72 V.

Mechanical Data

Connections

Pin	Designation	Function
1	RC	Remote control for turn-on and off.
2	NC	Not connected.
3	+In	Positive input. Connected to case.
4	-In	Negative input.
5	NC	Not connected.
6	-Out 2	Negative output 2.
7	+Out 2	Positive output 2.
8	-Out 1	Negative output 1.
9	+Out 1	Positive output 1.
10	V_{adj}	Output voltage adjust.

Weight

Maximum 75 g (2.66 oz).

Case

Blue anodized aluminium casing with embedded tin plated copper pins.

Thermal Data

Two-parameter model

Power dissipation is generated in the components mounted on the ceramic substrate. The thermal properties of the PKG DC/DC converter is determined by thermal conduction in the connected pins and thermal convection from the substrate via the case.

The two-parameter model characterizes the thermal properties of the PKG DC/DC converter and the equation below can be used for thermal design purposes if detailed information is needed. The values are given for a module mounted on a printed board assembly (PBA).

Note that the thermal resistance between the substrate and the air, $R_{th\ sub\ A}$ is strongly dependent on the air velocity.

$$T_{sub} = P_d \times R_{th\ sub\ P} \times R_{th\ sub\ A} / (R_{th\ sub\ P} + R_{th\ sub\ A}) + (T_p - T_A) \times R_{th\ sub\ A} / (R_{th\ sub\ P} + R_{th\ sub\ A}) + T_A$$

Where:

- P_d : dissipated power, calculated as $P_O \times (1/ -1)$
- T_{sub} : max average substrate temperature, T_{Cmax}
- T_A : ambient air temperature at the lower side of the power module
- T_p : average pin temperature at the PB solder joint
- $R_{th\ sub\ P}$: thermal resistance from T_{sub} to the pins
- $R_{th\ sub\ A}$: thermal resistance from T_{sub} to T_A
- v : velocity of ambient air.

Air velocity in free convection is 0.2–0.3 m/s (40-60 lfm).

Over Temperature Protection(OTP)

The PKG DC/DC converters have an internal over temperature protection circuit. If the case temperature exceeds min +115 °C the power module will go in to OTP-mode. As long as the case temperature exceeds min +115°C the power module will operate in OTP-mode.

During the OTP-mode the DC/DC converter will shut down completely and when the case temperature has decreased 25°C the converter will automatically restart.

Typical Characteristics

PKG 4319 PI

1. Maximum deviation $\Delta V_O < 0.1 \times V_{Oi}$
Recover time $t_r < 100 \mu s$
The output voltage deviation is determined by the load transient (dl/dt)
2. Load change:
 $0.25 \times I_{Onom} \dots 0.75 \times I_{Onom} \dots 0.25 \times I_{Onom}$
 $dl/dt \approx 5 A/\mu s$

PKG 4410 PI

1. Maximum deviation $\Delta V_O < 0.1 \times V_{Oi}$
Recover time $t_r < 100 \mu s$
The output voltage deviation is determined by the load transient (dl/dt)
2. Load change:
 $0.25 \times I_{Onom} \dots 0.75 \times I_{Onom} \dots 0.25 \times I_{Onom}$
 $dl/dt \approx 5 A/\mu s$

PKG 4611 PI

PKG 4617 PIOA

PKG 4428 PI

1. Maximum deviation $\Delta V_O < 0.1 \times V_{O1}$
Recover time $t_r < 100 \mu s$
The output voltage deviation is determined by the load transient (dl/dt)

2. Load change:
 $0.25 \times I_{O1nom} \dots 0.75 \times I_{O1nom} \dots 0.25 \times I_{O1nom}$
 $dl/dt \approx 5A/\mu s$

PKG 4623 PI

1. Maximum deviation $\Delta V_O < 0.1 \times V_{O1}$
Recover time $t_r < 100 \mu s$
The output voltage deviation is determined by the load transient (dl/dt)

2. Load change:
 $0.25 \times I_{O1nom} \dots 0.75 \times I_{O1nom} \dots 0.25 \times I_{O1nom}$
 $dl/dt \approx 5A/\mu s$

¹⁾ Outputs paralleled.

PKG 4625 PI

Dynamic load response (typ)¹⁾

1. Maximum deviation $\Delta V_O < 0.1 \times V_{O1}$
The output voltage deviation is determined by the load transient (dl/dt)

2. Load change:
 $0.25 \times I_{O1nom} \dots 0.75 \times I_{O1nom} \dots 0.25 \times I_{O1nom}$
 $dl/dt \approx 5A/\mu s$

¹⁾ Outputs paralleled.

Dynamic load response (typ)

1. Maximum deviation $\Delta V_O < 0.1 \times V_{O1}$
Recover time $t_r < 100 \mu s$
The output voltage deviation is determined by the load transient (dl/dt)

2. Load change:
 $0.25 \times I_{O1nom} \dots 0.75 \times I_{O1nom} \dots 0.25 \times I_{O1nom}$
 $dl/dt \approx 5A/\mu s$

EMC Specifications

The PKG DC/DC converter is mounted on a double sided printed circuit board (PB) with groundplane during EMC measurements.

The fundamental switching frequency is 510 kHz 5% @ $V_I = 53$ V, $I_O = (0.1 \dots 1.0) \times I_{O \text{ max}}$.

Conducted EMI Input terminal value (typ)

External Filter (class B)

Required external input filter in order to meet class B in EN 55022, CISPR 22 and FCC part 15J.

The capacitors are of ceramic type. The low ESR is critical for the result.

Test Set-up according to CISPR publ. 1A.

Radiated EMS (Electro-Magnetic Fields)

Radiated EMS is measured according to test methods in IEC Standard publ. 801-3. No deviation outside the V_O tolerance band will occur under the following conditions:

Frequency range	Voltage level
0.01...200 MHz	3 V _{rms} /m
200...1,000 MHz	3 V _{rms} /m
1...12 GHz	10 V _{rms} /m

EFT

Electrical Fast Transients on the input terminals may cause output deviations outside what is tolerated by the electronic circuits, i.e. 5%.

The PKG power module can withstand EFT levels of 0.5 kV keeping V_O within the tolerance band and 2.0 kV without destruction. Tested according to IEC publ. 801-4.

Output Ripple & Noise ($V_{O\text{ac}}$)

Output ripple is measured as the peak to peak voltage of the fundamental switching frequency.

Operating information

Remote Control (RC)

Remote turn-on and turn-off can be realized by using the RC-pin. Normal operation is achieved if pin 1 is open (NC). If pin 1 is connected to pin 4 the PKG DC/DC converter turns off. To ensure safe turn-off the voltage difference between pin 1 and 4 shall be less than 0.6 V. RC is TTL open collector compatible (see fig. 1).

Over Voltage Protection (OVP)

The PKG 4000 I DC/DC converter series has an internal Over Voltage Protection circuitry (latching). The circuitry will detect over voltage conditions on the output and stop the converter operation. The recommended way to reset the OVP is by removing the input voltage. The OVP can not be triggered from the output (it can not be tested by applying high voltage on the output pins) and occurs only if the DC/DC converter has a real failure.

Output Voltage Adjust (V_{adj})

To decrease the output voltage the resistor should be connected between pin 10 and pin 9 (+Out 1). To increase the output voltage the resistor should be connected between pin 10 and pin 8 (-Out1). Output voltage, V_O , can be adjusted by using an external resistor. A 0.1 M Ω resistor will change V_O approximately 5%. For more information see AN 104 G.

Maximum Capacitive Load

The PKG DC/DC converter series has no limitation of maximum connected capacitance on the output, however the converter may operate in current limiting mode during start-up, affecting the ramp-up and the start-up time if large capacitance values are connected. For optimum performance we recommend a maximum of 100 F/A of I_O for dual outputs. Connect capacitors at the point of load for best performance.

Parallel Operation

The load regulation characteristics and temperature coefficients of the PKG DC/DC converter are designed to allow parallel operation. Paralleling of several modules is easily accomplished by connection of the output voltage terminal pins. The connections should be symmetrical, i.e. the resistance between the output terminal and the common connection point of each module should be equal. Good paralleling performance is achieved if you allow the resistance to be 10 m Ω . 10 m Ω equals 50 mm (2 in) of 35 m Ω (1 oz/ft 2) copper with a trace width of 2.5 mm (0.1 in).

It is recommended not to exceed $P_O = n \times 0.8 \times P_{O\max}$, where $P_{O\max}$ is the maximum converter output power and n the number of paralleled converters, in order to avoid overloading any of the converters and thereby decreasing the reliability.

Paralleling performance may be further improved by voltage matching. Voltage matching is accomplished by using the Output Adjust function and trim the outputs to the same voltage.

Current Limiting Protection

The output power is limited at loads above the output current limiting threshold (I_{lim}), specified as a minimum value.

Input and Output Impedance

Both the source impedance of the power feeding and the load impedance will interact with the impedance of the DC/DC converter.

It is most important to have the ratio between L and C as low as possible, i.e. a low characteristic impedance, both at the input and output, as the converters have a low energy storage capability.

Use an electrolytic capacitor across the input or output if the source or load inductance is larger than 10 mH. Their equivalent series resistance together with the capacitance acts as a lossless damping filter. Suitable capacitor values are in the range 10–100 mF.

Delivery Package Information

PKG 4000I series standard delivery package is a 50 pcs box (One box contains 5 full trays).

Tray Specification

Material:	Polystyrene (PS)
Max surface resistance:	10 M Ω /sq
Color:	Black
Capacity:	10 pcs/tray
Loaded tray stacking pitch:	17 mm
Weight:	133 g

Quality

Reliability

Meantime between failure (MTBF) is calculated to >1.7 million hours at full output power and a case temperature of +75°C ($T_A = +40^\circ\text{C}$), using the Ericsson failure rate data system. The Ericsson failure rate data system is based on field failure rates and is continuously updated. The data corresponds to actual failure rates of component used in Information Technology and Telecom equipment in temperature controlled environments ($TA = -5\dots+65^\circ\text{C}$). The data is considered to have a confidence level of 90%. For more information see Design Note 002.

Quality Statement

The products are designed and manufactured in an industrial environment where quality systems and methods like ISO 9000, 6 and SPC, are intensively in use to boost the continuous improvements strategy. Infant mortality or early failures in the products are screened out by a burn-in procedure and an ATE-based final test. Conservative design rules, design reviews and product qualifications, as well as high competence of an engaged work force, contribute to the high quality of our products.

Warranty

Ericsson Power Modules warrants to the original purchaser or end user that the products conform to this Data Sheet and are free from material and workmanship defects for a period of five (5) years from the date of manufacture, provided the product is used within specified conditions and not modified in any way. In case the product is discontinued, claims will be accepted up to three (3) years from the date of the discontinuation. For additional details on this limited warranty we refer to Ericsson Power Modules "General Terms and Conditions of Sales", or individual contract documents.

Limitation of Liability

Ericsson Power Modules does not make any other warranties, expressed or implied including any warranty of merchantability or fitness for a particular purpose (including, but not limited to, use in life support applications, where malfunctions of product can cause injury to a person's health or life).
