

## Features

- Non-Isolated
- Synchronous rectification design
- Adjustable Output voltage
- 2, 3, 4AMP Adjustable Positive Step Down Integrated Switching Regulator
- Over load protection (125% full load typical)
- Remote ON/OFF Control(Ground Off)
- Wide Input Range
- UL94V-0 Package Material
- Continuous short circuit protection (Very low short current  $I_{sc} < 50mA$ )
- Input voltage range 4.5V~28V
- Efficiency to 97%

## Description

The R-7XXX series is a high performance 2.5V to 15V , 2Amp to 4Amp, 12-Pin SIP (single in-line package), Integrated switching regulator (ISR). The Synchronous - rectified design yields excellent efficiencies up to 97%. Short circuit protection reduces the short circuit input current to under 50mA .

## Selection Guide

| Part Number<br>SIP12 | Input Range<br>(V) | Nominal Output Voltage<br>(V) | Vout Adjust Range<br>(V) | Output Current<br>(A) | Efficiency (%) |     |          |
|----------------------|--------------------|-------------------------------|--------------------------|-----------------------|----------------|-----|----------|
|                      |                    |                               |                          |                       | Min. Vin       | 12V | Max. Vin |

Note:  $V_{in} - V_{out} \geq 1.5V - 4.0V$  depending on  $V_{out}$  if adjust function is used!

Suffix x: (see mechanical drawing for details)

x = P pins vertical through hole

x = D pins bent for horizontal through hole mounting

**Notes:**

- Requires a 100µF electrolytic or tantalum output capacitor for proper operation in all applications (the capacitor to be placed as close as possible to the output pins).
- ON / OFF pin driven by TTL (logic gate), open-collector bipolar transistor or open-drain MOSFET.

## Output Current vs Input Voltage

### How to calculate the max output current

The internal power dissipation(P<sub>D</sub>)follows the equation:

$$P_D = I_o \times V_o \times (1-\eta)$$

$$I_o = P_D / V_o \times (1-\eta)$$

Where P<sub>D</sub> = Internal power dissipation

I<sub>o</sub> = Output current

V<sub>o</sub> = Output voltage

η = Efficiency

Example: R-745.0P, at Vin = 28Vdc, Vo = 5Vdc, η=91% (see "Selection Guide" table)

(a) When Ta = 60°C, P<sub>D</sub> = 1.4 Watt (see beside diagram)

$$I_o = 1.4(W) / 5(V) \times (1-0.91) = 3.11(A)$$

(b) When Ta = 85°C, P<sub>D</sub> = 1 Watt (see beside diagram)

$$I_o = 1(W) / 5(V) \times (1-0.91) = 2.222(A)$$

(c) At Vin = 12Vdc efficiency = 94% (see "Selection Guide" table)

When Ta = 85°C, P<sub>D</sub> = 1 Watt (see beside diagram)

$$I_o = 1(W) / 5(V) \times (1-0.94) = 3.33(A)$$

## Standard Application Circuit

Add a blocking diode to Vout if current can flow backwards into the output, as this can damage the converter.

Protection diodes are required for high capacitive loads.

Refer to R-5xxxA Datasheet (see Optional Diode Protection Circuit) for circuit suggestions.
