Functional principle

Inductive sensors are designed for wear-free and non-contact detection of metal objects. For this purpose they use a high-frequency electro-magnetic AC field that interacts with the target. Concerning inductive sensors, this field is generated by an LC resonant circuit with a ferrite core coil.

Mounting instructions

Distance D	60 mm
Distance W	20 mm
Distance T	18 mm (Fe metal); 80 mm (non Fe-metal)
Distance S	30 mm (Fe metal); 40 mm (non Fe-metal)
Distance G	65 mm

Diameter of the active area B

Ø 18 mm

Switching distance not reduced when flush mounted in ferrous metals

When mounted in non-ferrous metals the active face has to protrude 16 mm.

The values depend on the mounting nuts used. Therefore we recommend the use of the nuts which are included in the delivery.
