FAST CMOS 18-BIT R/W BUFFER

IDT54/74FCT162701T/AT

FEATURES:

- 0.5 MICRON CMOS Technology
- **Typical tsk(o) (Output Skew) < 250ps**
- **Low input and output leakage $\leq 1\mu\text{A}$ (max.)**
- ESD > 2000V per MIL-STD-883, Method 3015;
> 200V using machine model (C = 200pF, R = 0)
- Packages include 25 mil pitch SSOP, 19.6 mil pitch TSSOP,
15.7 mil pitch TVSOP and 25 mil pitch Cerpack
- Extended commercial range of -40°C to +85°C
- Balanced Output Drivers: $\pm 24\text{mA}$ (commercial),
 $\pm 16\text{mA}$ (military)
- Reduced system switching noise
- Typical VOLP (Output Ground Bounce) < 0.6V at
VCC = 5V, TA = 25°C
- Ideal for new generation x86 write-back cache solutions
- Suitable for modular x86 architectures
- Four deep write FIFO
- Latch in read path
- Synchronous FIFO reset

DESCRIPTION:

The FCT162701T/AT is an 18-bit Read/Write buffer with a four deep FIFO and a read-back latch. It can be used as a read/write buffer between a CPU and memory or to interface a high-speed bus and a slow peripheral. The A-to-B (write) path has a four deep FIFO for pipelined operations. The FIFO can be reset and a FIFO full condition is indicated by the full flag ($\overline{\text{FF}}$). The B-to-A (read) path has a latch. A HIGH on LE, allows data to flow transparently from B-to-A. A LOW on LE allows the data to be latched on the falling edge of LE.

The FCT162701T/AT has a balanced output drive with series termination. This provides low ground bounce, minimal undershoot and controlled output edge rates.

PIN DESCRIPTION

Pin Names	I/O	Description
A1-18	I/O	18 bit I/O port.
B1-18	I/O	18 bit I/O port.
CLK	I	Clock for write path FIFO. Clocks data into FIFO when $\overline{WCE}$ is low, clocks data out of FIFO when $\overline{RCE}$ is low. When FIFO is full all further writes to the FIFO are inhibited. When FIFO is empty all reads from the FIFO are inhibited. CLK also resets the FIFO when $\overline{RESET}$ is low.
$\overline{WCE}$	I	Enable pin for FIFO input clock.
$\overline{RCE}$	I	Enable pin for FIFO output clock.
$\overline{FF}$	O	Write path FIFO full flag. Goes low when FIFO is full.
$\overline{RESET}$	I	Synchronous FIFO reset - when low CLK resets the FIFO. The FIFO pointers are initialized to the "empty" condition and FIFO output is forced high (all ones). The FIFO full flag ($\overline{FF}$) will be high immediately after reset.
$\overline{OEAB}$	I	Output Enable pin for B port.
$\overline{OEBA}$	I	Output Enable pin for A port.
LE	I	Read path latch enable pin. When high, data flows transparently from B port to A port, B data is latched on the falling edge of LE.

ABSOLUTE MAXIMUM RATINGS⁽¹⁾

Symbol	Description	Max.	Unit
$V_{TERM}^{(2)}$	Terminal Voltage with Respect to GND	-0.5 to +7.0	V
$V_{TERM}^{(3)}$	Terminal Voltage with Respect to GND	-0.5 to $V_{CC} + 0.5$	V
TSTG	Storage Temperature	-65 to +150	°C
I_{OUT}	DC Output Current	-60 to +120	mA

NOTES:

2915 lmk 02

- Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
- All device terminals except FCT162XXXXT Output and I/O terminals.
- Output and I/O terminals for FCT162XXXXT.

CAPACITANCE ($T_A = +25^\circ\text{C}$, $f = 1.0\text{MHz}$)

Symbol	Parameter ⁽¹⁾	Conditions	Typ.	Max.	Unit
C_{IN}	Input Capacitance	$V_{IN} = 0V$	3.5	6.0	pF
$C_{I/O}$	I/O Capacitance	$V_{OUT} = 0V$	3.5	8.0	pF

2915 lmk 03

NOTE:

- This parameter is measured at characterization but not tested.

FUNCTIONAL DESCRIPTION:

This device is useful as a read/write buffer for modular high end designs. It provides multi-level buffering in the write path and single deep buffering in the read path, and is suited to write back cache implementation. The read path provides a transparent latch.

The four deep FIFO uses one clock with two clock enable pins, $\overline{WCE}$ and $\overline{RCE}$ to clock data in and out. The FIFO has an external full flag which goes LOW when the FIFO is full. Internal read and write pointers keep track of the words stored in the FIFO. A write attempt to a full FIFO is ignored. An attempt to read from an empty FIFO will have no effect and the last read data remains at the output of the FIFO. The FIFO may be reset by the synchronous $\overline{RESET}$ input. This resets

the read and write pointers to the original "empty" condition and also sets all B outputs = 1. Simultaneous read and write attempts (clock data into FIFO as well as clock data out of FIFO) are possible except on FIFO empty and full boundaries. When the FIFO is empty, and a simultaneous read and write is attempted, the read is ignored while the write is executed. If the same is attempted when the FIFO is full, the write is ignored while the read is executed. Normal operation of the four deep FIFO in the write path is independent of the read path operation.

Power, ground and data pin positions on the FCT162701T match those on the FCT16501T/162501T, allowing an easy upgrade.

APPLICATIONS: 486 INTERFACE

NOTES:

2915 Ink 05

- For conditions shown as Max. or Min., use appropriate value specified under Electrical Characteristics for the applicable device type.
- Typical values are at $V_{CC} = 5.0\text{V}$, $+25^{\circ}\text{C}$ ambient.
- Not more than one output should be tested at one time. Duration of the test should not exceed one second.
- Duration of the condition can not exceed one second.
- The test limit for this parameter is $\pm 5\mu\text{A}$ at $T_A = -55^{\circ}\text{C}$.

POWER SUPPLY CHARACTERISTICS

				$V_{IN} = 3.4V$ $V_{IN} = \text{GND}$	—	2.7	5.0	

NOTES:

2915 tbl 06

- For conditions shown as Max. or Min., use appropriate value specified under Electrical Characteristics for the applicable device type.
- Typical values are at $V_{CC} = 5.0V$, $+25^\circ\text{C}$ ambient.
- Per TTL driven input ($V_{IN} = 3.4V$). All other inputs at V_{CC} or GND .
- This parameter is not directly testable, but is derived for use in Total Power Supply Calculations.
- Values for these conditions are examples of the I_{CC} formula. These limits are guaranteed but not tested.
- $I_C = I_{QUIESCENT} + I_{INPUTS} + I_{DYNAMIC}$
 $I_C = I_{CC} + \Delta I_{CC} D_{HNT} + I_{CCD}(\text{CLK}) \times f_{CP} + I_{CCD}(O/P) \times f_o \times N_o$
 $I_{CC} = \text{Quiescent Current (} I_{CCL}, I_{CCH} \text{ and } I_{CCZ} \text{)}$
 $\Delta I_{CC} = \text{Power Supply Current for a TTL High Input (} V_{IN} = 3.4V \text{)}$
 $D_H = \text{Duty Cycle for TTL Inputs High}$
 $N_T = \text{Number of TTL Inputs at } D$
 $I_{CCD} = \text{Dynamic Current Caused by an Input Transition Pair (HLH or LHL)}$
 $f_{CP} = \text{Clock Frequency for Register Devices (Zero for Non-Register Devices)}$
 $f_o = \text{Output Frequency}$
 $N_o = \text{Number of Outputs at } f_o$
