

TK Series

If you want your electronic components totally insulated and protected from dust, water and corrosion, then the TK-Series is the correct choice in enclosures. Enclosures are available with clear or grey lids as standard. Smoked lids are available on request.

Even protection from electromagnetic interference is no problem for the HF-EMC models of the series. The variety of types, the comprehensive range of system accessories and the excellent possibilities for subsequent expansion make the TK- Series a real “quick- change artist.” We have UL approval on all the polycarbonate enclosures in the TK Series.

Enclosures customized to your requirements - an example of the Spelsberg commitment to our customers. Experience what Spelsberg and the TK - Series can do for your standard or special requirements.

We have produced a comprehensive guide to the TK range, please call or email and we will send you a copy.
