

DATASHEET

Intematix ChromaLit™ *Remote Phosphor Light Source*

Features & Benefits

- Unprecedented design freedom for solid state lighting products and systems
- Customizable shape, size and CCT
- Custom saturated colors available
- Powered by radiant energy from blue LEDs, lasers and OLEDs
- Streamlined supply and production of luminaires
- Glare free and uniform light quality
- High CRI
- Consistent color matching
- Up to 30% higher system efficacy compared to conventional LED lighting designs

Applications and Uses

- Downlights
- Spots and modules
- Modular shapes for linear lighting
- Retrofit lamps
- Task lighting
- High bay
- Panel lighting
- Colored lighting for signals and vehicles

Product Nomenclature

The part number designation for the CL series is explained as follows:
CL-xxx-yyyy-zz

Where:

X—Designates first digit in CRI followed by the first two digits in CCT

Y—Designates dimension

Z—Designates substrate material

Example:

CL-830-R75-PC represents ChromaLit 80CRI, 3000K CCT, 75mm Round, Polycarbonate

Notes:

- 1. Reference Operation** Please refer to reference design guide for detail on reference operation
- 2. Color Consistency** is dependent on the AVERAGE dominant wavelength of blue LEDs. ChromaLit will achieve 3 SDCM with uniform blue LED average dominant wavelength. 2.5nm (±1.25nm) of average blue LED wavelength variation will provide 4 SDCM of color consistency. 5nm (±2.5nm) of average blue LED dominant wavelength variation will provide 5 SDCM of color consistency. See ChromaLit Binning Diagram
- 3. Conversion Efficacy** is the luminous flux (white light) output per radiant watt of blue light input to the remote phosphor source. Wrad is the radiometric power measured in watts. Conversion efficacy is rated based on reference operation and dominant blue LED wavelength of 455nm (peak wavelength of 450nm). Intematix maintains tolerance of ± 7% on flux and chromaticity measurements.
- 4. Minimum CRI** rating is based on reference design using blue LEDs with average dominant wavelength of 455nm. Please refer to page 8 for more information on performance characteristics over wavelength.

Handling Considerations

As a dirty or damaged phosphor layer could result in alteration in product performance, ChromaLit light sources should be handled similarly to most optical components. It is best to handle the parts at the edges and prevent mechanical abrasion. If epoxies are used, they must be kept off of the entrance or exit apertures of ChromaLit, since they could greatly impact performance. If parts require cleaning, use a lint free tissue, isopropanol (IPA), or mild detergent. Dry using compressed air.

Company Information

Intematix Corporation is a materials development innovator, providing customizable, patented phosphors that serve as the foundation for high quality, energy efficient LED light. Intematix products enable attractive, vivid color quality, superior consistency, uniformity and stability. Headquartered in Fremont, California, Intematix maintains R&D, manufacturing, business and support operations in the United States, Asia and Europe.
