

Rad-hard current mode PWM controller

FLAT-8 metallic lid floating

Features

- Oscillator frequency guaranteed at 250 kHz
- Trimmed oscillator for precise frequency control
- Current mode operation to 500 kHz automatic feed forward compensation
- Latching PWM for cycle-by-cycle current limiting
- Internally trimmed reference with undervoltage lockout
- High current totem pole output
- Undervoltage lockout with hysteresis
- Low start-up (<0.5 mA) and operating current
- Ceramic hermetic package Flat-8 metallic lid floating
- ST1843 50 krad (Si)
- ST1845 100 krad (Si)
- SEL free @ 120 MeV/cm²/mg at 125 °C
- ESCC qualified as 9108/020 and 9108/021

Description

The **ST1843** and **ST1845** ICs are rad-hard current mode PWM controllers providing an industry standard solution for the implementation of off-line or DC to DC fixed-frequency current mode control schemes with a minimal external part count.

Its radiation hardness, hermetic packaging and its ESCC qualification make it an ideal choice for aerospace and other harsh environments.

Figure 1. Block diagram (toggle flip-flop used in the ST1845 only)

2 Maximum ratings

Table 1. Absolute maximum ratings

Symbol	Parameter	Value	Unit
V_i	Supply voltage (low impedance source)	30	V
	Supply voltage ($I_i < 30$ mA)	Self-limiting	
I_O	Output current	± 1	A
E_O	Output energy (capacitive load)	5	μ J
	Analog inputs (pins 2, 3)	-0.3 to 5.5	V
	Error amplifier output sink current	10	mA
P_{tot}	Power dissipation at $T_A \leq 25$ °C	800	mW
T_{stg}	Storage temperature range	-55 to 150	°C
T_J	Junction operating temperature	-55 to 150	°C

Note: All voltages are with respect to pin 5, all currents are positive into the specified terminal.

3 Thermal data

Table 2. Thermal data

Symbol	Description	Flat-8	Unit
R_{thj-a}	Thermal resistance junction-ambient conditions: 2s2p board as per std Jedec spec. JESD51-7 board size: 76.2x114.5x1.6 mm outer layers: 20% Cu inner layers: 90% Cu natural convection, $T_{AMB} = 25\text{ }^{\circ}\text{C}$. 100 μm air- gap between package and board filled in with glue ($k = 1\text{ W/m}^{\circ}\text{K}$)	47.7	$^{\circ}\text{C/W}$
$R_{thj-c\text{ top}}$	Package top case (lid cap side) in contact with a cold plate (infinite heat sink like) as per std Jedec spec JESD51-12	20.4	
R_{thj-b}	Ring cold plate as per std Jedec spec JESD51-8	34.7	

4 Pin connection

Figure 2. Pin connection

The mettalic lid is floating.

AMG110120170901MT

Table 3. Pin functions

No	Function	Description
1	COMP	This pin is the error amplifier output and is made available for loop compensation.
2	V_{FB}	This is the inverting input of the error amplifier. It is normally connected to the switching power supply output through a resistor divider.
3	I_{SENSE}	A voltage proportional to inductor current is connected to this input. The PWM uses this information to terminate the output switch conduction.
4	R_T/C_T	The oscillator frequency and maximum output duty cycle are programmed by connecting resistor R_T to V_{ref} and capacitor C_T to ground. Operation to 500 kHz is possible.
5	GROUND	This pin is the combined control circuitry and power ground.
6	OUTPUT	This output directly drives the gate of a power MOSFET. Peak currents up to 1 A are sourced and sunk by this pin.
7	V_i	This pin is the positive supply of the control IC.
8	V_{ref}	This is the reference output. It provides charging current for capacitor C_T through resistor R_T .

5 Electrical characteristics

Maximum package power dissipation limits must be respected; low duty cycle pulse techniques are used during test maintain T_J as close to T_A as possible.

Unless otherwise stated, these specifications apply for $-T_A = 22 \pm 3^\circ\text{C}$, $V_i = 15\text{ V}$, adjust V_i above the start threshold before setting at 15 V ; $R_T = 10\text{ k}\Omega$; $C_T = 3.3\text{ nF}$.

V _{iz}		Zener voltage	I _i = 25 mA	30		V

1. Parameter measured at trip point of latch with $V_{PIN2} = 0$.

2. Gain defined as:

$$A = \frac{\Delta V_{PIN1}}{\Delta V_{PIN3}}; 0 \leq \Delta V_{PIN3} \leq 0.8 \text{ V}$$

6 Radiation

The technology of the STMicroelectronics rad-hard current mode PWM controller is resistant to radioactive environments.

The product radiation hardness assurance is supported by a total ionisation dose (TID) tested at low dose rate and a single effect event (SEE) characterization.

6.1 Total dose radiation (TID) testing

The ST184x are qualified, tested and characterized in full compliance with the ESCC22900 “Low Rate” window: 36 to 360 rad/h.

A characterization in total ionizing dose has been done at very low dose rate, i.e. 36 rad/h, on each device type on 5 parts biased and 5 parts unbiased.

Each wafer lot is tested at low dose rate, in the worst bias case condition, based on the results obtained during the initial qualification.

Both pre-irradiation and post-irradiation performance has been tested using the same circuitry and test conditions. A direct comparison can be done ($T_{amb} = 22 \pm 3$ °C unless otherwise specified).

The following parameters were measured:

- Before irradiation
- After irradiation at final dose
- After 24 hrs at room temperature
- After 168 hrs at 100 °C anneal

Table 5. Total dose performance

Feature	Conditions	Max. value	Unit
Total-ionization dose immunity	ST1843 low dose rate.	50	krad(Si)
	Compliance with electrical measurements for total dose radiation testing		
	ST1845 low dose rate.	100	
	Compliance with electrical measurements for total dose radiation testing		

Unless otherwise stated, these specifications apply for $-T_A = 22 \pm 3$ °C, $V_I = 15$ V, adjust V_I above the start threshold before setting at 15 V; $R_T = 10$ kΩ; $C_T = 3.3$ nF

V _{iz}	Zener voltage	I _i = 25 mA	30		V

1. For the ST1845 the limits applies to the internal frequency of the device before the output divider by 2. The limits for the external frequency are divide by 2 ,i.e. 24.5 kHz min and 32.5 kHz max.

6.2 Single event effect

A Single event effect characterization has been performed on the qualification lots only. They have been performed according to single event effects test method ESCC basic specification number 25100. SEE tests have been characterized in RADEF (FI). The single event effect (SEE) relevant to power integrated circuits are characterized, i.e. the single event latch-up (SEL) and single event transient (SET).

The accept/reject criteria are:

- SEL: the device is biased during irradiation. Ambient temperature for the SEL test is 125 °C. The test is stopped as soon as a SEL occurs or when the consumption is above the nominal current level or when the overall fluency on the component reaches $1e^7 \text{ cm}^2$.
- SET: the device is biased during irradiation. Ambient temperature for the SET test is 25 °C. A SET is recorded when an event occurs on the output. The run is stopped when the overall fluency on the component reaches $1e^6 \text{ cm}^2$

Table 7. Radiation hardness assurance summary

Feature	Parameter	Conditions	Value	Unit
SEL immunity	Linear energy transfer (LET)	Range $\geq 40 \mu\text{m}$, $V_{\text{IN}} = 30 \text{ V}$, $T_A = +125 \text{ }^\circ\text{C}$. No destructive events	120	$\text{MeV.cm}^2/\text{mg}$
SET performance	Linear energy transfer threshold (LETth)	$V_{\text{IN}} = 15 \text{ V}$ $f_{\text{osc}} = 80 \text{ kHz}$ and 200 kHz	1.5	$\text{MeV.cm}^2/\text{mg}$
	ST1843 saturated cross-section		1.15 e-^2	cm^2
	ST1845 saturated cross-section		7.20 e-^3	cm^2

7 Test circuit

Figure 3. Open loop test circuit

High peak currents associated with capacitive loads necessitate careful grounding techniques. Timing and bypass capacitors should be connected close to pin 5 in a single point ground. The transistor and 5 k Ω potentiometer are used to sample the oscillator waveform and apply an adjustable ramp to pin 3.

AMG110120170919MT

Peak current (i_s) is determined by the formula:

$$I_{Smax} \approx \frac{1.0V}{R_S} \quad (1)$$

A small RC filter may be required to suppress switch transients.

1. Specific marking only. Complete marking includes in addition the following: ST logo, ESCC logo, date code and country of origin.

Note: Contact ST Sales office for information about specific conditions for products in die form, other quality levels and tape and reel packing.

9.1 Other information

9.1.1 Traceability information

The date code information is structured as described in the table below:

Table 10. Date codes

Model	Datecode ⁽¹⁾
EM	3yywwN
ESCC	yywwN

1. yy = year, ww = week number, N = lot index in the week

9.1.2

Documentation

Each product shipment includes a set of associated documentation within the shipment box. This documentation depends on the quality level of the products, as detailed in the table below.

The documentation is provided on printed paper in a dedicated envelop.

Table 11. Default documentation provided with the parts

Quality level	Documentation ⁽¹⁾
Engineering model	Certificate of conformance including: • Customer name • Customer purchase order number • ST sales order number and item • ST part number • Quantity delivered • Date code • Reference datasheet • Reference to the TN1180 on engineering models • ST Rennes assembly lot ID
ESCC flight	Certificate of conformance including: • Customer name • Customer purchase order number • ST sales order number and item • ST part number • Quantity delivered • Date code • Serial numbers • Reference of the applicable ESCC qualification maintenance lot • Reference to the ESCC detail specification • ST Rennes assembly lot ID Radiation verification test report ⁽²⁾

1. Default documentation only. Contact STMicroelectronics sales office for optional documentation.

2. Report of the ESCC22900 test supporting the delivered parts

ST products are sold pursuant to ST's terms and conditions of sale in place at the time of order acknowledgement.

Purchasers are solely responsible for the choice, selection, and use of ST products and ST assumes no liability for application assistance or the design of Purchasers' products.

No license, express or implied, to any intellectual property right is granted by ST herein.

Resale of ST products with provisions different from the information set forth herein shall void any warranty granted by ST for such product.

ST and the ST logo are trademarks of ST. For additional information about ST trademarks, please refer to www.st.com/trademarks. All other product or service names are the property of their respective owners.

Information in this document supersedes and replaces information previously supplied in any prior versions of this document.
