SKY65372-11: 699 to 748 MHz High Linearity, Active Bias Low-Noise Variable Gain Amplifier

Applications

- LTE, WCDMA, GSM wireless infrastructure
- Low noise, high linearity systems
- Macro base stations
- Small cells

Features

- Fully integrated low-noise front end
- High gain: 42 dB
- Excellent return loss: >20 dB
- High linearity gain control > 35 dB
- Low NF: 0.8 dB
- Switchable high/low gain state modes
- Temperature and process stable active bias
- Small MCM (16-pin, 8 x 8 mm) package (MSL3 @ 260 °C per JEDEC J-STD-020)

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

Description

The SKY65372-11 is variable gain Low-Noise Amplifier (LNA) with an active bias and high linearity performance. The first stage of the device is comprised of an LNA with a bypass switch that is followed by a high linearity driver amplifier, a variable voltage attenuator, and a high linearity power amplifier. This module architecture provides excellent return loss, low noise, and high linearity performance.

The internal active bias circuitry ensures repeatable performance over temperature. The device is fully integrated and requires minimal external components.

The SKY65372-11 is manufactured in a compact, 8 x 8 mm, 16-pin Multi-Chip Module (MCM) package. A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

The SKY65372-11 is part of a family of LNAs that cover the frequency range of 699 MHz to 2570 MHz:

- SKY65369-11, 832 to 862 MHz (Data Sheet # 201767)
- SKY65370-11, 814 to 849 MHz (Data Sheet # 201965)
- SKY65371-11, 880 to 915 MHz (Data Sheet # 201766)
- SKY65372-11, 699 to 748 MHz (this Data Sheet)
- SKY65373-11, 1710 to 1785 MHz (Data Sheet # 201764)
- SKY65374-11, 1850 to 1915 MHz (Data Sheet # 201966)
- SKY65375-11, 1920 to 1980 MHz (Data Sheet # 201755)
- SKY65376-11, 2500 to 2570 MHz (Data Sheet # 202458)

Note: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

CAUTION: Although this device is designed to be as robust as possible, Electrostatic Discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY65372-11 are provided in Table 2. The recommended operating conditions are specified

in Table 3. Electrical specifications are provided in Tables 4 through 7. The gain control logic is shown in Table 8.

Evaluation Board Description

The SKY65372-11 Evaluation Board is used to test the performance of the SKY65372-11 LNA. An assembly drawing for the Evaluation Board is shown in Figure 3 and the layer detail is provided in Figure 4. The layer detail physical characteristics are noted in Figure 5.

An Evaluation Board schematic diagram is provided in Figure 6. Table 9 provides the Bill of Materials (BOM) list for Evaluation Board components.

Package Dimensions

The PCB layout footprint for the SKY65372-11 is provided in Figure 7. Package dimensions for the 16-pin MCM are shown in Figure 8, and tape and reel dimensions are provided in Figure 9.

Package and Handling Information

Since the device package is sensitive to moisture absorption, it is baked and vacuum packed before shipping. Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY65372-11 is rated to Moisture Sensitivity Level 3 (MSL3) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to Skyworks Application Note, *PCB Design and SMT Assembly/Rework Guidelines for MCM-L Packages*, document number 101752.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.
