

MAXIM

+5V, +10V Precision Voltage References

REF01/REF02

General Description

The REF01 and REF02 are precision voltage references that are pretrimmed to within $\pm 3\%$ of +10V and +5V, respectively. Both references feature excellent temperature stability (as low as 8.5 ppm/ $^{\circ}\text{C}$ worst case), low current drain, and low noise. The REF02 also provides a TEMP pin whose output voltage varies linearly with temperature, making this device suitable for a wide variety of temperature-sensing and control applications. Both devices are available from Maxim in the space-saving SO package, as well as in the standard 8-pin TO-99 and MINI-DIP packages.

Features

- ◆ Pretrimmed to +5V, +10V $\pm 0.3\%$
- ◆ Excellent Temperature Stability: 3ppm/ $^{\circ}\text{C}$
- ◆ Low Noise: 10 $\mu\text{Vp-p}$ (REF02)
- ◆ Low Supply Current: 1.4mA max
- ◆ Short-Circuit Proof
- ◆ Linear Temperature Transducer O/P (REF02)

ABSOLUTE MAXIMUM RATINGS—REF01

Input Voltage	
REF01, A, E, H, All DICE	40V
REF01C	30V
Power Dissipation	
T099 (J) (derate at 7.1mW/°C above 80°C)	500mW
CERDIP (2) (derate at 6.7mW/°C above 75°C)	500mW
Plastic Dip (P) (derate at 5.6mW/°C above 36°C)	500mW
Small Outline (S) (derate at 5.0mW/°C above 55°C)	300mW
Output Short-Circuit Duration	
(to ground or V_{IN})	Indefinite

Storage Temperature Range	-65°C to +150°C
Operating Temperature Range	
REF01A, REF01	-55°C to +125°C
REF01E, REF01H, REF01C	
(except REF01CESA)	0°C to +70°C
REF01CESA	-40°C to +85°C
DICE Junction Temperature (T_J)	-65°C to +150°C
Lead Temperature (soldering, 60s)	+300°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS—REF01

Output Adjustment

The REF01 trim terminal can be used to adjust the voltage over a $10V \pm 300mV$ range. This feature allows the system designer to trim system errors by setting the reference to a voltage other than 10V, including 10.240V for binary applications (see the *Typical Operating Circuit* section).

Adjustment of the output does not significantly affect the temperature performance of the device. The temperature coefficient change is approximately 0.7ppm/ $^\circ C$ for 100mV of output adjustment.

Notes: See previous page.

Output Adjustment

The REF02 trim terminal can be used to adjust the output voltage over a $5V \pm 300mV$ range. This feature allows the system designer to trim errors by setting the reference to a voltage other than 5V (refer to the *Typical Operating Circuit* section).

Adjustment of the output does not significantly affect the temperature performance of the device. Typically, the temperature coefficient change is 0.7ppm/ $^{\circ}C$ for 100mV of output adjustment.

Temperature Voltage Output

The REF02 provides a temperature-dependent output voltage on the TEMP pin. This voltage is proportional to the absolute temperature, and has a scale factor of approximately 2.1mV/ $^{\circ}C$ (Figure 2).

$$\text{Output Voltage} = 2.1(T + 273)mV$$

where T = Temperature in $^{\circ}C$
