

High Voltage, High and Low Side Driver

NCP5304

The NCP5304 is a High Voltage Power gate Driver providing two outputs for direct drive of 2 N-channel power MOSFETs or IGBTs arranged in a half-bridge configuration.

It uses the bootstrap technique to insure a proper drive of the High-side power switch. The driver works with 2 independent inputs with cross conduction protection.

Features

- High Voltage Range: up to 600 V
- dV/dt Immunity ± 50 V/nsec
- Negative Current Injection Characterized Over the Temperature Range
- Gate Drive Supply Range from 10 V to 20 V
- High and Low Drive Outputs
- Output Source / Sink Current Capability 250 mA / 500 mA
- 3.3 V and 5 V Input Logic Compatible
- Up to V_{CC} Swing on Input Pins
- Extended Allowable Negative Bridge Pin Voltage Swing to -10 V for Signal Propagation
- Matched Propagation Delays between Both Channels
- Outputs in Phase with the Inputs
- Cross Conduction Protection with 100 ns Internal Fixed Dead Time
- Under V_{CC} LockOut (UVLO) for Both Channels
- Pin-to-Pin Compatible with Industry Standards
- These are Pb-Free Devices

Typical Applications

- Half-bridge Power Converters
- Full-bridge Converters

PIN DESCRIPTIONS

Pin No.	Pin Name	Pin Function
1	IN_LO	Logic Input for Low side driver output in phase
2	IN_HI	Logic Input for High side driver output in phase
3	VCC	Low side and main power supply
4	GND	Ground
5	DRV_LO	Low side gate drive output
6	BRIDGE	Bootstrap return or High side floating supply return
7	DRV_HI	High side gate drive output
8	VBOOT	Bootstrap power supply

MAXIMUM RATINGS

Symbol	Rating	Value	Unit
V_{CC}	Main power supply voltage	-0.3 to 20	V
$V_{CC_transient}$	Main transient power supply voltage: $I_{V_{CC_max}} = 5 \text{ mA}$ during 10 ms	23	V
V_{BRIDGE}	VHV: High Voltage BRIDGE pin	-1 to 600	V
V_{BRIDGE}	Allowable Negative Bridge Pin Voltage for IN_LO Signal Propagation to DRV_LO (see characterization curves for detailed results)	-10	V
$V_{BOOT-V_{BRIDGE}}$	VHV: Floating supply voltage	-0.3 to 20	V
V_{DRV_HI}	VHV: High side output voltage	$V_{BRIDGE} - 0.3$ to $V_{BOOT} + 0.3$	V
V_{DRV_LO}	Low side output voltage	-0.3 to $V_{CC} + 0.3$	V
dV_{BRIDGE}/dt	Allowable output slew rate	50	V/ns
V_{IN_XX}	Inputs IN_HI, IN_LO	-1.0 to $V_{CC} + 0.3$	V
	ESD Capability: - HBM model (all pins except pins 6-7-8 in 8 pins package or 11-12-13 in 14 pins package) - Machine model (all pins except pins 6-7-8 in 8 pins package or 11-12-13 in 14 pins package)	2 200	kV V
	Latch up capability per Jedec JESD78		
$R_{\theta JA}$	Power dissipation and Thermal characteristics PDIP-8: Thermal Resistance, Junction-to-Air SO-8: Thermal Resistance, Junction-to-Air	100 178	°C/W
T_{J_max}	Maximum Operating Junction Temperature	+150	°C

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

OUTPUT SECTION

I _{DRVsource}	Output high short circuit pulsed current V _{DRV} = 0 V, PW ≤ 10 μs (Note 2)	–	250	–	mA
I _{DRVsink}	Output low short circuit pulsed current V _{DRV} = V _{CC} , PW ≤ 10 μs (Note 2)	–	500	–	mA
R _{OH}	Output resistor (Typical value @ 25°C) Source	–	30	60	Ω
R _{OL}	Output resistor (Typical value @ 25°C) Sink	–	10	20	Ω
V _{DRV_H}	High level output voltage, V _{BIAS} –V _{DRV_XX} @ I _{DRV_XX} = 20 mA	–	0.7	1.6	V
V _{DRV_L}	Low level output voltage V _{DRV_XX} @ I _{DRV_XX} = 20 mA	–	0.2	0.6	V

DYNAMIC OUTPUT SECTION

t _{ON}	Turn-on propagation delay (V _{bridge} = 0 V)	–	100	170	ns
t _{OFF}	Turn-off propagation delay (V _{bridge} = 0 V or 50 V) (Note 3)	–	100	170	ns
t _r	Output voltage rise time (from 10% to 90% @ V _{CC} = 15 V) with 1 nF load	–	85	160	ns
t _f	Output voltage fall time (from 90% to 10% @ V _{CC} = 15 V) with 1 nF load	–	35	75	ns
Δt	Propagation delay matching between the High side and the Low side @ 25°C (Note 4)	–	20	35	ns
DT	Internal fixed dead time (Note 5)	65	100	190	ns
t _{PW1}	Minimum input width that changes the output	–	–	50	ns
t _{PW2}	Maximum input width that does not change the output	20	–	–	ns

INPUT SECTION

V _{IN}	Low level input voltage threshold	–	–	0.8	V
R _{IN}	Input pull-down resistor (V _{IN} < 0.5 V)	–	200	–	kΩ
V _{IN}	High level input voltage threshold	2.3	–	–	V
I _{IN+}	Logic “1” input bias current @ V _{IN_XX} = 5 V @ 25°C	–	5	25	μA
I _{IN–}	Logic “0” input bias current @ V _{IN_XX} = 0 V @ 25°C	–	–	2.0	μA

SUPPLY SECTION

V _{CC_stup}	V _{CC} UV Start-up voltage threshold	8.0	8.9	9.9	V
V _{CC_shtdwn}	V _{CC} UV Shut-down voltage threshold	7.3	8.2	9.1	V
V _{CC_hyst}	Hysteresis on V _{CC}	0.3	0.7	–	V
V _{boot_stup}	V _{boot} Start-up voltage threshold reference to bridge pin (V _{boot_stup} = V _{boot} – V _{bridge})	8.0	8.9	9.9	V
V _{boot_shtdwn}	V _{boot} UV Shut-down voltage threshold	7.3	8.2	9.1	V
V _{boot_shtdwn}	Hysteresis on V _{boot}	0.3	0.7	–	V
I _{HV_LEAK}	Leakage current on high voltage pins to GND (V _{BOOT} = V _{BRIDGE} = DRV_HI = 600 V)	–	5	40	μA
ICC1	Consumption in active mode (V _{CC} = V _{boot} , f _{sw} = 100 kHz and 1 nF load on both driver outputs)	–	4	5	mA
ICC2	Consumption in inhibition mode (V _{CC} = V _{boot})	–	250	400	μA
ICC3	V _{CC} current consumption in inhibition mode	–	200	–	μA
ICC4	V _{boot} current consumption in inhibition mode	–	50	–	μA

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

- Parameter guaranteed by design
- Turn-off propagation delay @ V_{bridge} = 600 V is guaranteed by design
- See characterization curve for Δt parameters variation on the full range temperature.
- Timing diagram definition see Figure 7.
- Timing diagram definition see Figure 5 and Figure 6.

Figure 48. NCP5304, Negative Voltage Safe Operating Area on the Bridge Pin

APPLICATION INFORMATION

Negative Voltage Safe Operating Area

When the driver is used in a half bridge configuration, it is possible to see negative voltage appearing on the bridge pin (pin 6) during the power MOSFETs transitions. When the high-side MOSFET is switched off, the body diode of the low-side MOSFET starts to conduct. The negative voltage applied to the bridge pin thus corresponds to the forward voltage of the body diode. However, as pcb copper tracks and wire bonding introduce stray elements (inductance and capacitor), the maximum negative voltage of the bridge pin will combine the forward voltage and the oscillations created by the parasitic elements. As any CMOS device, the deep negative voltage of a selected pin can inject carriers into the substrate, leading to an erratic behavior of the concerned component. **onsemi** provides characterization data of its half-bridge driver to show the maximum negative voltage the driver can safely operate with. To prevent the negative injection, it is the designer duty to verify that the amount of negative voltage pertinent to his/her application does not exceed the characterization curve we provide, including some safety margin.

In order to estimate the maximum negative voltage accepted by the driver, this parameter has been characterized over full the temperature range of the component. A test fixture has been developed in which we purposely negatively bias the bridge pin during the freewheel period of a buck converter. When the upper gate voltage shows signs of an erratic behavior, we consider the limit has been reached.

Figure 48, illustrates the negative voltage safe operating area. Its interpretation is as follows: assume a negative 10 V pulse featuring a 100 ns width is applied on the bridge pin, the driver will work correctly over the whole die temperature range. Should the pulse swing to -20 V, keeping the same width of 100 ns, the driver will not work properly or will be damaged for temperatures below 125°C.

Summary:

- If the negative pulse characteristic (negative voltage level & pulse width) is above the curves the driver runs in safe operating area.
- If the negative pulse characteristic (negative voltage level and pulse width) is below one or all curves the driver will NOT run in safe operating area.

Note, each curve of the Figure 48 represents the negative voltage and width level where the driver starts to fail at the corresponding die temperature.

If in the application the bridge pin is too close of the safe operating limit, it is possible to limit the negative voltage to the bridge pin by inserting one resistor and one diode as follows:

Figure 49. R1 and D1 Improves the Robustness of the Driver

R1 and D1 should be placed as close as possible of the driver. D1 should be connected directly between the bridge pin (pin 6) and the ground pin (pin 4). By this way the negative voltage applied to the bridge pin will be limited by D1 and R1 and will prevent any wrong behavior.

onsemi, **Onsemi**, and other names, marks, and brands are registered and/or common law trademarks of Semiconductor Components Industries, LLC dba "**onsemi**" or its affiliates and/or subsidiaries in the United States and/or other countries. **onsemi** owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of **onsemi**'s product/patent coverage may be accessed at www.onsemi.com/site/pdf/Patent-Marking.pdf. **onsemi** reserves the right to make changes at any time to any products or information herein, without notice. The information herein is provided "as-is" and **onsemi** makes no warranty, representation or guarantee regarding the accuracy of the information, product features, availability, functionality, or suitability of its products for any particular purpose, nor does **onsemi** assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using **onsemi** products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by **onsemi**. "Typical" parameters which may be provided in **onsemi** data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. **onsemi** does not convey any license under any of its intellectual property rights nor the rights of others. **onsemi** products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use **onsemi** products for any such unintended or unauthorized application, Buyer shall indemnify and hold **onsemi** and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that **onsemi** was negligent regarding the design or manufacture of the part. **onsemi** is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.
