

**IDT74ALVCH16260**

## FEATURES:

- 0.5 MICRON CMOS Technology
- Typical  $t_{sk(o)}$  (Output Skew) < 250ps
- ESD > 2000V per MIL-STD-883, Method 3015; > 200V using machine model (C = 200pF, R = 0)
- $V_{CC} = 3.3V \pm 0.3V$ , Normal Range
- $V_{CC} = 2.7V$  to  $3.6V$ , Extended Range
- $V_{CC} = 2.5V \pm 0.2V$
- CMOS power levels ( $0.4\mu$  W typ. static)
- Rail-to-Rail output swing for increased noise margin
- Available in TSSOP package

## DRIVE FEATURES:

- High Output Drivers:  $\pm 24\text{mA}$
- Suitable for heavy loads

## APPLICATIONS:

- 3.3V high speed systems
- 3.3V and lower voltage computing systems

**DESCRIPTION:**

This 12-bit to 24-bit multiplexed D-type latch is built using advanced dual metal CMOS technology. The ALVCH16260 is used in applications in which two separate data paths must be multiplexed onto, or demultiplexed from, a single data path. Typical applications include multiplexing and/or demultiplexing address and data information in microprocessor or bus-interface applications. This device also is useful in memory interleaving applications.

Three 12-bit I/O ports (A1-A12, 1B1-1B12, and 2B1-2B12) are available for address and/or data transfer. The output-enable ( $\overline{OE1B}$ ,  $\overline{OE2B}$ , and  $\overline{OE A}$ ) inputs control the bus transceiver functions. The  $\overline{OE1B}$  and  $\overline{OE2B}$  control signals also allow bank control in the A-to-B direction. Address and/or data information can be stored using the internal storage latches. The latch-enable ( $\overline{LE1B}$ ,  $\overline{LE2B}$ ,  $\overline{LEA1B}$ , and  $\overline{LEA2B}$ ) inputs are used to control data storage. When the latch-enable input is high, the latch is transparent. When the latch-enable input goes low, the data present at the inputs is latched and remains latched until the latch-enable input is returned high.

The ALVCH16260 has been designed with a  $\pm 24\text{mA}$  output driver. This driver is capable of driving a moderate to heavy load while maintaining speed performance.

The ALVCH16260 has “bus-hold” which retains the inputs’ last state whenever the input goes to a high impedance. This prevents floating inputs and eliminates the need for pull-up/down resistors.

## ABSOLUTE MAXIMUM RATINGS<sup>(1)</sup>

| Symbol                             | Description                                                                      | Max                          | Unit |
|------------------------------------|----------------------------------------------------------------------------------|------------------------------|------|
| V <sub>TERM</sub> <sup>(2)</sup>   | Terminal Voltage with Respect to GND                                             | −0.5 to +4.6                 | V    |
| V <sub>TERM</sub> <sup>(3)</sup>   | Terminal Voltage with Respect to GND                                             | −0.5 to V <sub>CC</sub> +0.5 | V    |
| T <sub>STG</sub>                   | Storage Temperature                                                              | −65 to +150                  | °C   |
| I <sub>OUT</sub>                   | DC Output Current                                                                | −50 to +50                   | mA   |
| I <sub>IK</sub>                    | Continuous Clamp Current, V <sub>I</sub> < 0 or V <sub>I</sub> > V <sub>CC</sub> | ±50                          | mA   |
| I <sub>OK</sub>                    | Continuous Clamp Current, V <sub>O</sub> < 0                                     | −50                          | mA   |
| I <sub>CC</sub><br>I <sub>SS</sub> | Continuous Current through each V <sub>CC</sub> or GND                           | ±100                         | mA   |

### NOTES:

- Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
- V<sub>CC</sub> terminals.
- All terminals except V<sub>CC</sub>.

## CAPACITANCE (T<sub>A</sub> = +25°C, F = 1.0MHz)

| Symbol           | Parameter <sup>(1)</sup> | Conditions            | Typ. | Max. | Unit |
|------------------|--------------------------|-----------------------|------|------|------|
| C <sub>IN</sub>  | Input Capacitance        | V <sub>IN</sub> = 0V  | 5    | 7    | pF   |
| C <sub>OUT</sub> | Output Capacitance       | V <sub>OUT</sub> = 0V | 7    | 9    | pF   |
| C <sub>I/O</sub> | I/O Port Capacitance     | V <sub>IN</sub> = 0V  | 7    | 9    | pF   |

### NOTE:

- As applicable to the device type.

## FUNCTION TABLES<sup>(1)</sup>

### NOTES:

1. H = HIGH Voltage Level  
L = LOW Voltage Level  
X = Don't Care  
Z = High Impedance
2. Output level before the indicated steady-state input conditions were established.

## PIN DESCRIPTION

| Pin Names         | I/O | Description                                                                                                                                       |
|-------------------|-----|---------------------------------------------------------------------------------------------------------------------------------------------------|
| Ax(1:12)          | I/O | Bidirectional Data Port A. Usually connected to the CPU's address/data bus. <sup>(1)</sup>                                                        |
| 1Bx(1:12)         | I/O | Bidirectional Data Port 1B. Usually connected to the even path or even bank of memory. <sup>(1)</sup>                                             |
| 2Bx(1:12)         | I/O | Bidirectional Data Port 2B. Usually connected to the odd path or odd bank of memory. <sup>(1)</sup>                                               |
| LEA1B             | I   | Latch Enable Input for A-1B Latch. The latch is open when LEA1B is HIGH. Data from the A-port is latched on the HIGH to LOW transition of LEA1B.  |
| LEA2B             | I   | Latch Enable Input for A-2B Latch. The latch is open when LEA2B is HIGH. Data from the A-port is latched on the HIGH to LOW transition of LEA2B.  |
| LE1B              | I   | Latch Enable Input for 1B-A Latch. The latch is open when LE1B is HIGH. Data from the A-port is latched on the HIGH to LOW transition of LE1B.    |
| LE2B              | I   | Latch Enable Input for 2B-A Latch. The latch is open when LE2B is HIGH. Data from the A-port is latched on the HIGH to LOW transition of LE2B.    |
| SEL               | I   | 1B or 2B Port Selection. When HIGH, SEL enables data transfer from 1B Port to A Port. When LOW, SEL enables data transfer from 2B Port to A Port. |
| $\overline{OE}A$  | I   | Output Enable for A Port (Active LOW)                                                                                                             |
| $\overline{OE}1B$ | I   | Output Enable for 1B Port (Active LOW)                                                                                                            |
| $\overline{OE}2B$ | I   | Output Enable for 2B Port (Active LOW)                                                                                                            |

### NOTE:

1. These pins have "Bus-Hold". All other pins are standard inputs, outputs, or I/Os.

## DC ELECTRICAL CHARACTERISTICS OVER OPERATING RANGE

Following Conditions Apply Unless Otherwise Specified:

Operating Condition:  $T_A = -40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$

Test Circuit for All Outputs

#### DEFINITIONS:

$C_L$  = Load capacitance: includes jig and probe capacitance.

$R_T$  = Termination resistance: should be equal to  $Z_{OUT}$  of the Pulse Generator.

#### NOTES:

1. Pulse Generator for All Pulses: Rate  $\leq 1.0\text{MHz}$ ;  $t_r \leq 2.5\text{ns}$ ;  $t_f \leq 2.5\text{ns}$ .
2. Pulse Generator for All Pulses: Rate  $\leq 1.0\text{MHz}$ ;  $t_r \leq 2\text{ns}$ ;  $t_f \leq 2\text{ns}$ .

### SWITCH POSITION

| Test                                    | Switch     |
|-----------------------------------------|------------|
| Open Drain<br>Disable Low<br>Enable Low | $V_{LOAD}$ |
| Disable High<br>Enable High             | GND        |
| All Other Tests                         | Open       |

Output Skew -  $tsK(x)$

#### NOTES:

1. For  $tsK(0)$  OUTPUT1 and OUTPUT2 are any two outputs.
2. For  $tsK(b)$  OUTPUT1 and OUTPUT2 are in the same bank.

Propagation Delay

Enable and Disable Times

#### NOTE:

1. Diagram shown for input Control Enable-LOW and input Control Disable-HIGH.

Set-up, Hold, and Release Times
