

QUAD BUFFER for REFERENCE CIRCUIT IC

■GENERAL DESCRIPTION

The **NJM2342** is a 4 channel buffer IC packaged in the small TVSP 10.

The **NJM2342** provides buffered voltage from the external input voltage.

The sink-source output configuration effectively absorbs transient response of load changes.

Therefore, it is suitable for reference voltage generation for Video DAC, LCD bias voltage and other applications where transient response becomes an issue.
