*1 AUX output power is not included.

*2 The current of input surge to a built-in noise filter (0.2ms or less) is excluded.

*3 Measured by 500MHz oscilloscope.

Ripple and ripple noise is measured on measuring board with capacitor of 22μF within 150mm from the output terminal.

*4 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25°C, with the input voltage held constant at the rated input/output.

*5 Can not be used above the rated output current and the rated output power.

*6 When the output voltage is adjusted to higher than 49.92V and the load factor is over 70% of the rated current, if the load current changes quickly (< 200msec), the output voltage drops approximately 5V below the setting voltage.

*7 Output voltage recovers from protection by shutting down the input voltage and waiting more than 10 seconds then turning on AC input again, or turning off the output voltage by remote control.

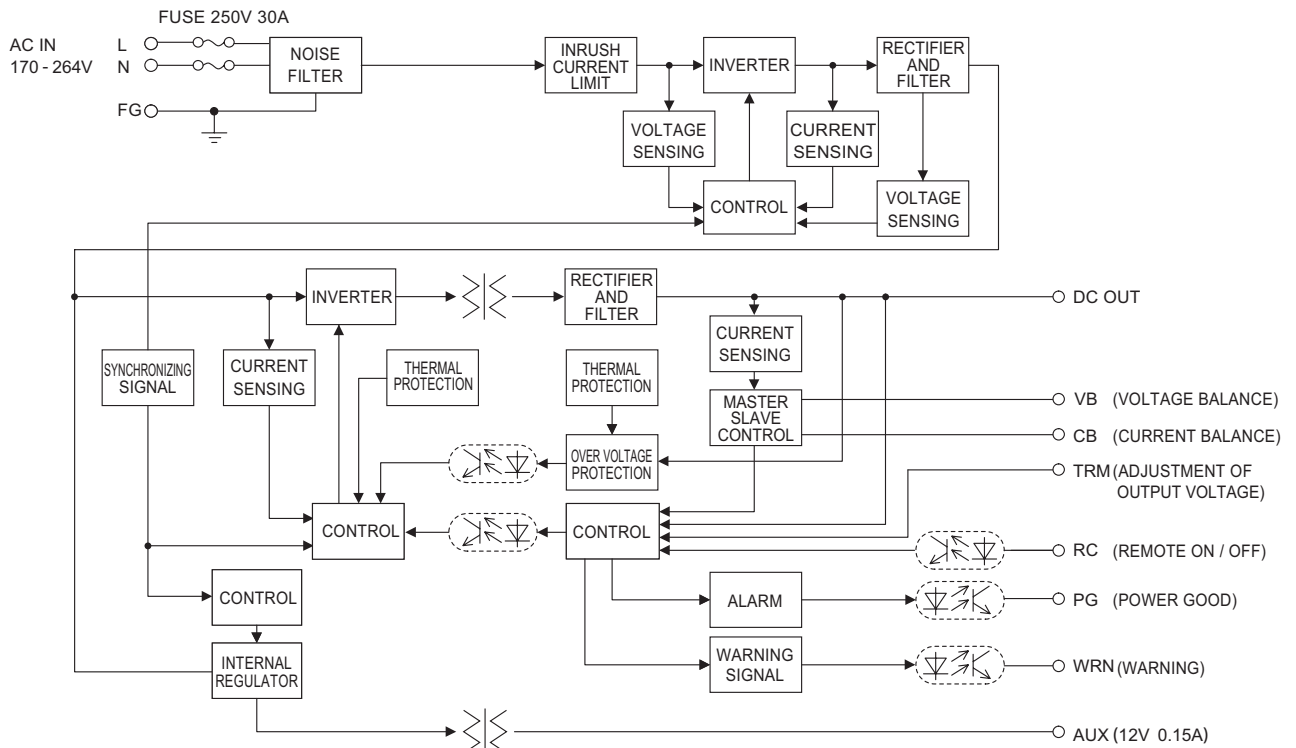

*8 Please contact us about another class.

*9 Case size contains neither the terminal blocks, connector and screw nor.

To meet the specifications. Do not operate over-loaded condition.

A sound may occur from power supply at peak loading.
