VEROTEC Cases

CUSTOM VEROTEC CASES

TecServ+ is the vehicle by which Verotec delivers its value added services. These fall within 5 main categories and are described below. When it comes to Verotec Cases, we've worked with many customers in the past to design, manufacture and help bring to market modified and custom versions of our standard products – a small selection of these are pictured below. If you have any special Verotec Case requirements, please contact our sales office.

ENGINEERING SERVICES:

- + Complete review of commercial, electro-mechanical, environmental and regulatory product requirements with customer.
- + Import of STEP, IGES, DWG & DXF file formats
- + Mechanical and electrical design using latest CAD software
- + 3D Modelling to allow conceptual testing before production
- + Component selection from a vast library of parts

MANUFACTURING SERVICES:

- + Prototype / pre-production samples using small batch shop
- + Modification of standard catalogue products (including machining, CNC punching, laser cutting, painting & silk-screening)
- + Manufacture of custom / bespoke products (including fabrication, machining, CNC punching, plating, painting & silk-screening)
- + Assembly & kitting of components
- + Integration & mechanical / electrical testing of complex systems

COMPLIANCE SERVICES:

- + Validation of product design and/or specification
- + Advice on environment legislation (RoHS, Reach, WEEE etc.)
- + In-house pre-compliance testing for CE marking (Safety, EMC)
- + Supply of product technical construction file
- + Testing & certification of a product at an approved test house (for EMC, shock & vibration, altitude, temperature, humidity etc.)

LOGISTICAL SERVICES:

- + Express manufacturing service for quick turnaround of urgent orders
- + Special / bespoke packaging for safe transport of goods
- + Scheduled orders (including JIT and KAN BAN systems)
- + Stock holding & distribution
- + Exporting (including export packaging, land/sea/air transportation, freight forwarding, customs documentation & shipping manifests)

PROJECT MANAGEMENT SERVICES:

- + Initial project consultation
- + Capability and feasibility study
- + Estimation of project cost and leadtime
- + Management of design process (specification to validation)
- + Management of manufacturing process (prototype to production)
- + Cost reduction programmes throughout product life cycle

Custom 4U x 19inch Verotec Case with IP sealed front door – telecoms application.

Customised 1U x 10.5 Verotec Case with modified front and rear panel - instrumentation application.

Customised 2U x 10.5 Verotec Case with modified front panel – gas testing application.

Verotec Case - Introduction

INTRODUCTION

The Verotec case offer an excellent combination of technical competence and aesthetic design, making it an ideal packaging solution for high-end electronic instruments. The superior design provides an upgrade path from a basic unit to a high-EMC, IP54 rated enclosure that meets the demands of many environmental requirements. The main assembly screws are hidden discretely beneath clip-in mouldings, meaning there are no visible fixings and your product can be both secure and visually clean.

"Cases" are available in 1U, 2U, 3U & 6U heights in both 10.5" & 19" widths and in a choice of four depths. Integral panel mounts facilitate the mounting of 19" (full width) and 10.5" (half width) panels, subracks & equipment with two colour schemes and ventilation modes available. "Caseframes" are available in 3U & 6U heights in both 42HP & 84HP widths and a choice of two depths. Internal horizontal tiebars allow the direct mounting of Eurocard style PCBs, modules and front panels with two colour schemes available. Accessories include EMC & IP sealing kits, handles, trims, front panels and chassis trays

FEATURES

- Attractive clean design with hidden fixings
- 19 inch equipment practise compatible
- 4 heights, 2 widths and 4 depth options
- Light Grey and Two Tone Anthracite/Light Grey colour options
- Front Cover trims with optional handle extrusion
- Carry handle option for half width 10.5" and full with 19" units
- Optional upgrades for EMC protection and IP 55 environmental sealing
- Range of accessories
- Transparent hinged door available to order on TecServ+
- Caseframe version using KM6-2 Subrack and accessories
- Supplied assembled

ORDERING

Verotec Cases & Caseframe should be ordered as the basic case which will be supplied in a carton and assembled. Selection criteria for cases are size, colour and ventilation and for Caseframes size and colour.

Accessories exclusively for Verotec cases & Caseframes are in the following pages of this section of the handbook. They can be found in the pages shown in the index.

19" panels can be found in section 9 of the handbook whilst Eurocard front panels and accessories in section 2 (these are listed on page 5.14)

MATERIAL SPECIFICATION

Covers & Side Panels:	0.9mm Galvanised Steel Sheet
Corner Extrusions:	Aluminium Alloy
Fixings:	M4 x 16 Csk Head; M4 x 6 Cheese Head
Mouldings:	ABS UL94-V0 Light Grey RAL 7035 or Anthracite RAL 7016

THERMAL MANAGEMENT

Verotec Cases have the option to be supplied with ventilation holes in the base, allowing cool air to be drawn into the case, by natural convection. Vented rear panels may be specified promoting a "through flow" of cool air over the equipment.

In both the base panel and the rear panel the matrix of holes has been design such that in minimises the degradation of the EMC/RFI performance of the case.

In cases of high thermal load Verotec can offer to supply Verotec cases with fans and/or fan apertures on the rear panel supplied as part of the Tecserv+ service

EMC PROTECTION

Verotec Cases have been designed with inherent EMC/RFI protection. Fitted with optional EMC/IP Front and Rear Panels and conductive finger strips the cases will provide a high level of attenuation across a broad frequency range. EMC/IP Front and rear panels are available as optional accessories along with a gasket kit for the Verotec Case

IP PROTECTION

In order to meet a wider range of applications the non-vented Verotec Case can be upgraded to meet IP 54. Fitted with optional EMC/IP Front and Rear panels and IP seals the cases will protect internal equipment from ingress of moisture and dust.

COLOUR SCHEMES

Verotec cases are available in a choice of two colour schemes; RAL 7035 Light Grey and Two-tone RAL 7035 Light Grey / 7016 Anthracite. This applies to both the plastic corner mouldings and metal covers which are painted with epoxy fine textured powder.

VEROTEC CASES & CASEFRAMES : Overview

OVERVIEW

Verotec Cases & Caseframes have been designed to offer electronics designers an attractive enclosure with the maximum amount of flexibility for an increased number of applications. As well as 3U and 6U sizes for cases and caseframes, (which tends to be the industry standard for eurocard based products), the Verotec case is also available in 1U and 2U heights, which are ideally suited to smaller bespoke instruments.

Finally a key feature of the Verotec Case is its ability to be “upgraded” to give an improved EMC and IP rating. This is achieved by adding front and rear EMC/IP panels and gaskets, either EMC or IP or both.

APPLICATIONS

- Instrumentation
- Electronics
- Portable Measuring Equipment
- Integrated Systems
- Medical Equipment

1U and 2U Verotec case

Verotec Case – Exploded View 6U with accessory front panel, rear panel and trims.

Verotec Caseframe – Exploded view 6U with accessory 6U vented rear panel

Verotec Case: 1U & 2U Cases

Verotec Cases offer an excellent combination of technical competence and aesthetic design. Equipment can be housed in a standard full width (19inch) or half width (10.5 inch) envelope either 1U & 2U high and up to 300mm deep. The Verotec case is ideally suited to desktop or workbench mounting. With the extruded corners, cover mouldings and tilt feet it is readily stacked for multi instrument applications. The tilt feet provide an excellent facility for viewing front panel displays and can be easily raised or lowered as required.

The Verotec case is available in a range of sizes to offer an enclosure solution to the greatest number of instrument applications. Ventilation is provided by a matrix of holes in the base which when a rear panel is added provide a through flow of cool air. To enhance its visual appeal the case is offered in two colour options. Either as single colour Light grey RAL 7025 or Two Tone Light Grey RAL 7035 and Anthracite RAL 7016.

FEATURES

- Heights: 1U & 2U
- Widths: Full Width 19 inch & Half Width 10.5 Inch
- Depths: 260mm & 300mm
- Optional Vented base panel
- Optional Single colour Light Grey or Two Tone Light Grey & Anthracite
- Powder painted in textured finish for high scratch resistance
- Tilt foot fitted to front foot moulding
- Hidden fixings under clip in mouldings
- Upgrades for EMC and Environmental protection

Verotec Case: 3U Caseframes 42 & 84 hp

Verotec Caseframes offer an excellent combination of technical competence and aesthetic design. Eurocards can be housed in a standard 84 hp or 42 hp width either 3U or 6U high and up to 500mm deep. The Verotec caseframe is ideally suited to desktop or workbench mounting. With the extruded corners, cover mouldings and tilt feet it is readily stacked for multi instrument applications. The tilt feet provide an excellent facility for viewing front panel displays and can be easily raised or lowered as required. The Verotec caseframe range is available in two widths 42 and 84 hp, two heights 3U & 6U and 300, 400 & 500 mm depths offering the widest range of applications. Ventilation is provided by a matrix of holes in the base which when a rear panel is added provide a through flow of cool air. To enhance its visual appeal the case is offered in two colour options. Either as single colour Light grey RAL 7025 or Two Tone Light Grey RAL 7035 and Anthracite RAL 7016.

FEATURES

- Heights: 3U & 6U, Widths: Full Width 19 inch & Half Width 10.5 Inch
- Depths: 300mm, 400mm & 500mm
- Vented base panel
- Optional Single colour Light Grey or Two Tone Light Grey & Anthracite
- Powder painted in textured finish for high scratch resistance
- Tilt foot fitted to front foot moulding
- Hidden fixings under clip in mouldings
- Upgrades for EMC and Environmental protection
- Subrack components based upon the industry standard KM6-II system

6U Caseframe

6U Caseframe Dimensional detail

Verotec Cases offer 5 front trim options depending upon the application they are being used for:

Option 1 – No front trims – this would be used when a Verotec plain front panel is used in Verotec case. In this application the front panel fixings are visible, but this option offers the ability to be able to quickly remove the front panel without removing the top cover of the case.

Option 2 – Front Cover Trims – These can be fitted with or without a Verotec front panel and would cover the panel fixings. The covers are made up of two extrusions which slide together and require the top cover of the case to be removed adding to security. When used with a 19inch front panel the 19 inch panel fixings remain visible for simple removal of the front panel.

FRONT COVER TRIMS ORDERING INFORMATION

height	Order Code
1U	70-132501
2U	70-132502
3U	70-132503
6U	70-4004315

Option 3 – Front Cover Trims with handles – These trims offer the same features and benefits of the cover trims but with the infill trim being replaced by a handle infill. This gives the added benefit of being able easily lift the case front the front and offers protection to front mounted components.

Verotec Case: Front & Rear Panels

Verotec Case: has its own range of dedicated front and rear panels. Most cases will require a rear panel, which can be either ventilated or not. Aluminium front panels are available and allow the fitment of optional trims and handles to the front of the case.

Front Panels for the Verotec case are supplied in anodised aluminium and are designed to provide an aesthetic front finish for the case. The front panels are manufactured from 2.5mm thick aluminium sheet which is readily modified to accept switches, displays and other front panel mounting components. The front panel fixes to the vertical extrusions in the front corners of the case. The visual appearance of the panel can be enhanced by optionally fitting trims or handle trims over the front panel. As well as improving the appearance this also enhances the security of the case by covering the front panel fixing screws. Similar to the front of the case the rear can also be fitted with a front panel and trims which as well as enhancing the visual appearance also improve the security of the unit by hiding the panel fixings.

Rear Panels are supplied in 0.9mm zintec steel which is then painted in Light grey fine texture epoxy powder. There is the option to fit either a standard or ventilated rear panel. The ventilated rear panel version, whilst effective on its own, will serve to enhance the through flow of air in the Verotec case when used in conjunction with the ventilated version of the Verotec case.

Verotec Case: EMC/IP Front & Rear Panels, Sealing Kits

Verotec Case: has the ability to upgrade with EMC and IP sealing and is one of the unique features of the Verotec Case range.

By fitting an EMC/IP panel to the front and rear of a Verotec Case it is then possible to add a combination of EMC seals or IP gaskets to provide up to 40dB attenuation at 1 GHz or an environmental seal to IP54.

With the Verotec case it is also possible to fit both types of seal together. This means that a Verotec case can provide both EMC and Environmental sealing for the same application of an instrument case.

EMC/IP Front & Rear panels are required in order to upgrade a Verotec case with EMC and Environmental seals. The panels are made up of two parts. The outer panel, which is 3mm aluminium, creates a decorative finish which is anodised. The inner panel, which is 0.9mm galvanised steel is conductive and corrosion resistant. The inner panel provides the flanges to fix the EMC or IP seals allowing them to mate with the front and rear frames of the Verotec case.

EMC & IP Seal Kits are required to complete the EMC and Environmental sealing of a Verotec case. EMC kits contain all the seals need to fit into a case to enhance its screening performance. EMC kits are configured dependent upon the size of case IP gasket kits are available in two sizes one for cases of 1U & 2U and one for cases of 3U & 6U. In all cases the Verotec case will need to be disassembled to fit the seal kit and for all sizes it is possible to fit both the EMC and Environmental into the same case if so required.

IP Seal Kits –	1 set of self-adhesive gaskets

MATERIAL SPECIFICATION:

EMC Seal Kit –	Beryllium Copper fingers
IP Seal Kits –	Self-adhesive PVC foam gaskets

EMC/IP Front & Rear Panel – Dimensional Detail

EMC Seal Kits

IP Seal Kits

IP54

IP	INDEX OF PROTECTION
5	Protected against dust and accidental contact. No dust enters the enclosure in harmful quantities. No risk of direct contact with electronic components.
4	Protected against water splashes from all sides. No water enters the enclosure in harmful amounts.

CHASSIS TRAYS AND SUPPORT KITS

These are sold as separate items to give the maximum flexibility when creating and internal tray within a Verotec case. Chassis tray supports are available in 4 depths each to suit the overall depth of the case they are fitted to.

Chassis trays are available in a range of depths and two widths 19inch and 10.5 inch. They are intended for the mounting of discreet components which would not normally be mounted in a 19inch enclosure. If required, more than one tray can be fitted to match the depth of the case, with a space to allow cables to be passed between them.

CHASSIS TRAY SUPPORT KIT ORDERING INFORMATION

Case Depth	Order Code
260	70-4004030
300	70-4004031
400	70-4004032
500	70-4004563

CONTENTS OF KIT:

2off	Chassis Tray Support - 1.2mm Galvanised Steel
4off	Fixing screws & Washers

CHASSIS TRAY KIT ORDERING INFORMATION

Case Depth	Width	Order Code
110	10.5	70-4004033
