

# Ceramic Resonators(SMD) CCR Series

# Conformity to RoHS Directive

#### **FEATURES**

- The CCR series are thin-type ceramic chip resonators. Thickness shear mode or 3rd over-tone thickness expansion mode element are used for both the 4.0 to 11.0MHz band and the 16.0 to 50.0MHz band.
- Products with built-in loading capacitance have piezoelectric elements that are mounted onto a capacity-forming dielectric substrate.
  - This eliminates the need for external capacitors, thus simplifying circuit requirements.
- Optimization of the temperature characteristics of both the piezoelectric element and dielectric materials has resulted in stable oscillating frequency.
- Corresponds to reflow soldering. Moreover, it is possible to correspond Pb-free soldering.(260°C,10sec. max.)
   Packaging style is emboss taping.
- Setting or matching of oscillating frequency which correspond to new models, application IC or custom IC are also available, please contact TDK.

#### **TEMPERATURE RANGES**

Operating/Storage	−40 to +85°C

• Conformity to RoHS Directive: This means that, in conformity with EU Directive 2002/95/EC, lead, cadmium, mercury, hexavalent chromium, and specific bromine-based flame retardants, PBB and PBDE, have not been used, except for exempted applications.

All specifications are subject to change without notice.

### **RELIABILITY AND TEST CONDITIONS**

The following test items are satisfied.

- (1) Oscillating frequency change: Within ±0.25%
- (2) Resonant resistance change: Within  $\pm 10\Omega$
- (3) Appearance; serious abnormalities not to exist.

( / 11 /
