

Electric Actuator/Slider Type

Series 11-LEFS

Clean Room Specification

Clean Room Specification ISO Class 4 (Class 10)!

- Built-in vacuum piping
- Possible to mount the main body without removing the external cover, etc.
- Body-integrated linear guide specification

Vacuum exhaust minimises external particle generation from the ball screw and guide.

Step Motor (Servo/24 VDC)

Servo Motor (24 VDC) Type

Ball Screw Drive Series 11-LEFS

Size: 16, 25, 32, 40

Max. work load: **60 kg**

Positioning repeatability: ± 0.02 mm

AC Servo Motor (100/200/400 W)

Type

Ball Screw Drive Series 11-LEFS

Size: 25, 32, 40

- High output motor (100/200/400 W)
- Improved high speed transfer ability (Max.: 1,000 m/s)
- High acceleration compatible (5,000 mm/s²)
- Pulse input type/CC-Link direct input type/SSCNET III type
- With internal absolute encoder (LECSB specification)

Particle Generation Measuring Method

The particle generation data for SMC Clean Series are measured in the following test method.

Test Method (Example)

Place the specimen in the acrylic resin chamber and operate it while supplying the same flow rate of clean air as the suction flow rate of the measuring instrument (28.3 L/min). Measure the changes of the particle concentration over time until the number of cycles reaches the specified point. The chamber is placed in an ISO Class 5 equivalent clean bench.

Measuring Conditions

Chamber	Internal volume	28.3 L
	Supply air quality	Same quality as the supply air for driving
Measuring instrument	Description	Laser dust monitor (Automatic particle counter by lightscattering method)
	Minimum measurable particle diameter	0.1 μm
	Suction flow rate	28.3 L/min
Setting conditions	Sampling time	5 min
	Interval time	55 min
	Sampling air flow	141.5 L

Evaluation Method

To obtain the measured values of particle concentration, the accumulated value ^{Note 1)} of particles captured every 5 minutes, by the laser dust monitor, is converted into the particle concentration in every 1 m³. When determining particle generation grades, the 95% upper confidence limit of the average particle concentration (average value), when each specimen is operated at a specified number of cycles ^{Note 2)} is considered. The plots in the graphs indicate the 95% upper confidence limit of the average particle concentration of particles with a diameter within the horizontal axis range.

Note 1) Sampling air flow rate: Number of particles contained in 75 L of air
Note 2) Actuator: 1 million cycles

⚠ Caution

Note) CE-compliant products

- EMC compliance was tested by combining the electric actuator LEF series and the controller LEC series. The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore conformity to the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result it is necessary for the customer to verify conformity to the EMC directive for the machinery and equipment as a whole.
- For the servo motor (24 VDC) specification, EMC compliance was tested by installing a noise filter set (LEC-NFA). Refer to the sheet catalogue CAT.ES100-87 for the noise filter set. Refer to the LECA Operation Manual for installation.

The actuator and controller are sold as a package. (Controller → Refer to the sheet catalogue CAT.ES100-87.)

Confirm that the combination of the controller and the actuator is correct.

<Check the following before use.>

- Check that actuator label for model number. This matches the controller.
- Check Parallel I/O configuration matches (NPN or PNP).

* Refer to the operation manual for using the products. Please download it via our website, <http://www.smcworld.com>

Note 1) Consult with SMC for the manufacture of intermediate strokes other than those specified on the above.

Note 2) For details, refer to "Speed-Work Load Graph (Guide)" on page 14.

Note 3) The allowable speed will change depending on the stroke.

Note 4) Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (Test was performed with the actuator in the initial state.)

Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. Test was performed in both an axial direction and a perpendicular direction to the lead screw. (Test was performed with the actuator in the initial state.)

Note 5) Only when motor option "With lock" is selected.

Note 6) For an actuator with lock, add the power consumption for the lock.
