TYPE - HFEMS

Type HFEMS™ has an inner core that is made from a fully interlocked bronze strip and does not contain a braided shield. An all-temperature Polyurethane jacket is extruded over the core, resulting in a sealed, waterproof raceway when assembled with liquidtight fittings.

Type HFEMS™ liquidtight flexible shielding conduit is designed for field installations where safety concerns exist regarding a material's reaction in a fire situation. The specially formulated thermoplastic polyurethane jacket has excellent flame retardancy and low smoke characteristics. Acidic gases such as hydrogen chloride, hydrogen fluoride and hydrogen bromide are virtually eliminated as products of combustion.
