DESCRIPTION

The SY100S370 is a universal demultiplexer/decoder that can be used as either a dual 1-of-4 decoder or as a single 1-of-8 decoder and is designed for use in high-performance ECL systems. The Mode control (M) input determines the function. In the dual 1-of-4 mode, each 4-input group has a pair of active-LOW Enable ($\bar{E}$) inputs. The Enable pins are assigned such that in the single 1-of-8 mode they can be tied together in pairs to result in two active-LOW Enable inputs. $\bar{E}_{1a}$ will be tied to $\bar{E}_{1b}$ and $\bar{E}_{2a}$ to $\bar{E}_{2b}$.

The auxiliary inputs (H_n) are used to determine whether the outputs are active-HIGH or active-LOW. The address inputs for the dual 1-of-4 mode are A_{0a} , A_{1a} , A_{0b} . A_{2a} is unused. In the 1-of-8 mode, the address inputs are A_{0a} , A_{1a} , A_{2a} . The inputs on the device have 75KΩ pull-down resistors.
