

1:10 Clock Fanout Buffer

Features

- Low-voltage operation
- Full-range support:
 - 3.3V
 - 2.5V
 - 1.8V
- Over voltage tolerant input hot swappable
- 1:10 fanout
- Drives either a 50-Ohm or 75-Ohm load
- Low-input capacitance
- Low-output skew
- Low-propagation delay
- Typical (tpd < 4 ns)
- High-speed operation:
 - -200 MHz@1.8V

— 650 MHz@2.5V/3.3V

- Industrial versions available
- Available packages include: SOIC, SSOP

Description

The Cypress series of network circuits are produced using advanced 0.35 micron CMOS technology, achieving the industries fastest logic and buffers.

The Cypress CY2CC910 fanout buffer features one input and ten outputs. Ideal for conversion from/to 3.3V/2.5V/1.8V

Designed for Data Communications clock management applications, the large fanout from a single input reduces loading on the input clock.

Cypress employs unique AVCMOS type outputs VOI™ (Variable Output Impedance) that dynamically adjust for variable impedance matching and eliminate the need for series damping resistors and reduce noise overall.

Note:

- Stresses greater than those listed under absolute maximum ratings may cause permanent damage to the device. This is intended to be a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operation sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

Notes:

- C_L includes probe and jig capacitance.
- All input pulses are supplied by generators having the following characteristics: $PRR < 100 \text{ MHz}$, $Z_0 = 50\Omega$, $t_R < 2.5 \text{ nS}$, $t_F < 2.5 \text{ nS}$.
- The outputs are measured one at a time with one transition per measurement.
- t_{PLH} and t_{PHL} are the same as t_{pd} .
