Dual Channel USB3.0 Redriver/Equalizer

Check for Samples: SN65LVPE502

FEATURES

- **Single Lane USB 3.0 Equalizer/Redriver**
- **Selectable Equalization, De-emphasis and Output Swing Control**
- **Integrated Termination**
- **Hot-Plug Capable**
- **Receiver Detect**
- **Low Power:**
  - **315mW(TYP), V_{CC} = 3.3V**
- **Auto Low Power Modes:**
  - **5mW (TYP) When no Connection Detected**
  - **70mW (TYP) When in U2/U3 Mode**
- **Excellent Jitter and Loss Compensation Capability: to 24"**
  - **24" of 6 mil Stripline on FR4**
  - **12" on Input and 4m, 26AWG USB 3.0 Cable on Output**
- **Small foot print – 24 Pin (4mm × 4mm) QFN Package**
- **High Protection Against ESD Transient**
  - **HBM: 5,000 V**
  - **CDM: 1,500 V**
  - **MM: 200 V**

APPLICATIONS

- **Notebooks, Desktops, Docking Stations, Backplane and Cabled Application**

DESCRIPTION

The SN65LVPE502 is a dual channel, single lane USB 3.0 redriver and signal conditioner supporting data rates of 5.0Gbps. The device complies with USB 3.0 spec revision 1.0, supporting electrical idle condition and low frequency periodic signals (LFPS) for USB 3.0 power management modes.

Programmable EQ, De-Emphasis and Amplitude Swing

The SN65LVPE502 is designed to minimize signal degradation effects such as crosstalk and inter-symbol interference (ISI) that limits the interconnect distance between two devices. The input stage of each channel offers selectable equalization settings that can be programmed to match loss in the channel. The differential outputs provide selectable de-emphasis to compensate for the anticipated distortion USB 3.0 signal will experience. Level of de-emphasis will depend on the length of interconnect and its characteristics. The SN65LVPE502 provides a unique way to tailor output de-emphasis on a per channel basis with use of DE and OS pins. All Rx and Tx equalization settings supported by the device are programmed by six 3-state pins as shown in Table 2.

Low Power Modes

The device supports three low power modes as described below.

1. Sleep Mode

   Initiated anytime EN_RXD undergoes a high to low transition or when device powers up with EN_RXD set low. In sleep mode both input and output terminations are held at HiZ and device ceases operation to conserve power. Sleep mode max power consumption is 1mW, entry time is 2µs, device exits sleep mode to Rx.Detect mode after EN_RXD is driven to V_{CC}, exit time is 100µs max.

2. RX Detect Mode – When no remote device is connected

   Anytime SN65LVPE502 detects a break in link (i.e., when upstream device is disconnected) or after powerup fails to find a remote device, SN65LVPE502 goes to Rx Detect mode and conserves power by shutting down majority of the internal circuitry. In this mode, input termination for both channels are driven to Hi-Z. In Rx Detect mode device power is <10mW(TYP) or less than 5% of its normal operating power This feature is useful in saving system power in mobile applications like notebook PC where battery life is critical.

   Anytime an upstream device gets reconnected the redriver automatically senses the connection and goes to normal operating mode. This operation requires no setting to the device.

3. U2/U3 Mode

   With the help of internal timers the device tracks when link enters USB 3.0 low power modes U2 and U3, in these modes link is in electrical idle state. SN65LVPE502 will selectively turn-off internal circuitry to save on power. Typical power saving is about 75% lower than normal operating mode. The device will automatically revert to active mode when signaling activity (LFPS) is detected.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

DESCRIPTION CONTINUED

Receiver Detection

RX.Detect cycle is performed by first setting Rx termination for each channel to Hi-Z, device then starts sensing for receiver termination that may be attached at the other end of each TX.

If receiver is detected on both channel:

- The TX and RX terminations are switched to $Z_{DIFF-TX}$, $Z_{DIFF-RX}$, respectively

If no receiver is detected on one or both channels:

- The transmitter is pulled to Hi-Z
- The channel is put in low power mode
- Device attempts to detect Rx termination in 12 ms (TYP) interval until termination is found or the device is put in sleep mode.

USB Compliance Mode

The device enters USB compliance mode when both EN_RXD and CM pins are set H. This mode is used to test the transmitter for compliance to voltage and timing specifications per USB 3.0 compliance specs. In this mode each channel will maintain its low-impedance termination R_{DC-RX}, while auto Rx detect operation in the device is disabled.

Electrical Idle Support

The electrical idle support is needed for low frequency periodic signaling (LFPS) used in USB 3.0 side band communication. A link is in an electrical idle state when the TX± voltage is held at a steady constant value like the common mode voltage. SN65LVPE502 detects an electrical idle state when RX± voltage at the device pin falls below $V_{RX\_IDLE\_DIFFpp}$ min. After detection of an idle state in a given channel the device asserts electrical idle state in its corresponding TX. When RX± voltage exceeds $V_{RX\_IDLE\_DIFFpp}$ max normal operation is restored and output start passing input signal. The electrical idle exit and entry time is specified at ≤6 ns.

Table 1. Pin Description

PIN			
NUMBER	NAME	I/O TYPE	DESCRIPTION
HIGH SPEED DIFFERENTIAL I/O PINS			
8	RX1–	I, CML	Non-inverting and inverting CML differential input for CH 1 and CH 2. These pins are tied to an internal voltage bias by dual termination resistor circuit
9	RX1+	I, CML	
20	RX2–	I, CML	
19	RX2+	I, CML	
23	TX1–	O, VML	Non-inverting and inverting VML differential output for CH 1 and CH 2. These pins are internally tied to voltage bias by termination resistors
22	TX1+	O, VML	
11	TX2–	O, VML	
12	TX2+	O, VML	

Table 1. Pin Description (continued)

PIN			
DEVICE CONTROL PIN			
5	EN_RXD	I, LVCMOS	Sets device operation modes per Table 2. Internally pulled to VCC
14	CM	I, LVCMOS	Sets device in compliance mode when pulled to VCC, internally pulled to GND
7,24	NC		Pads not internally connected
EQ CONTROL PINS (1)			
3,16	DE1, DE2	I, LVCMOS	Selects de-emphasis settings for CH 1 and CH 2 per Table 2. Internally tied to $V_{CC}/2$
2,17	EQ1, EQ2	I, LVCMOS	Selects equalization settings for CH 1 and CH 2 per Table 2. Internally tied to $V_{CC}/2$
4, 15	OS1, OS2	I, LVCMOS	Selects output amplitude for CH 1 and CH 2 per Table 2. Internally tied to $V_{CC}/2$
POWER PINS			
1,13	VCC	Power	Positive supply should be 3.3V ± 10%
6,10,18,21	GND	Power	Supply ground

(1) Internally biased to $V_{CC}/2$ with >200kΩ pull-up/pull-down. When pins are left as NC board leakage at this pin pad must be < 1 µA otherwise drive to $V_{CC}/2$ to assert mid-level state.

Table 2. Signal Control Pin Setting

OSx (1)	*TRANSITION* BIT AMPLITUDE (TYP mVpp)
NC (default)	1000
0	870
1	1085

EQx (1)	EQUALIZATION dB
NC (default)	0
0	7
1	15

DEx (1)	OSx (1) = NC	OSx (1) = 0	OSx (1) = 1
NC	–3.5 dB	–2.2 dB	–4.4 dB
0	–6.0 dB	–5.2 dB	–6.0 dB
1	–8.5 dB	–8.9 dB	–7.6 dB

EN_RXD	DEVICE FUNCTION
1 (default)	Normal operating mode
0	Sleep mode

CM	DEVICE FUNCTION
0 (default)	Normal Mode
1	Compliance mode

(1) Applies to Channel 1 and Channel 2 at 2.5 GHz.

ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature range (unless otherwise noted)(1)

		UNITS / VALUES
Supply Voltage Range(2)	V_{CC}	–0.5 V to 4 V
Voltage Range	Differential I/O	–0.5 V to 4 V
	Control I/O	–0.5 V to V_{CC} + 0.5V
Electrostatic discharge	Human Body Model(3)	±5000V
	Charged Device Model(4)	±1500V
	Machine Model(5)	±200V
Continuous power dissipation		See Dissipation Rating Table

(1) Stresses beyond those listed under absolute maximum ratings may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any conditions beyond those indicated under recommended operating conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) All voltage values, except differential voltages, are with respect to network ground terminal.
(3) Tested in accordance with JEDEC Standard 22, Test Method A114-B.
(4) Tested in accordance with JEDEC Standard 22, Test Method C101-A.
(5) Tested in accordance with JEDEC Standard 22, Test Method A115-A.

PACKAGE CHARACTERIZATION

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
P_D	Device power dissipation	CM, EN_RXD, EQ cntrl pins = NC, K28.5 pattern at 5 Gbps, V_{ID} = 1000 mVpp		330	450	mW
P_{SD}	Device power dissipation under low power mode	EN_RXD= GND		0.3	1	mW

THERMAL INFORMATION

REVISION HISTORY

Changes from Original (April 2010) to Revision A **Page**

- Changed in Table 1. Pin Description, signals: TX1+, TX1-, TX2+ and TX2- , I/O types changed from O, CML to O, VML also in Descripton, 'CML' to 'VML' 4

PACKAGING INFORMATION

Orderable part number	Status (1)	Material type (2)	Package | Pins	Package qty | Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)
SN65LVPE502RGER	NRND	Production	VQFN (RGE) | 24	3000 | LARGE T&R	Yes	NIPDAU	Level-2-260C-1 YEAR	0 to 85	LVPE502
SN65LVPE502RGER.B	NRND	Production	VQFN (RGE) | 24	3000 | LARGE T&R	Yes	NIPDAU	Level-2-260C-1 YEAR	0 to 85	LVPE502
SN65LVPE502RGET	NRND	Production	VQFN (RGE) | 24	250 | SMALL T&R	Yes	NIPDAU	Level-2-260C-1 YEAR	0 to 85	LVPE502
SN65LVPE502RGET.B	NRND	Production	VQFN (RGE) | 24	250 | SMALL T&R	Yes	NIPDAU	Level-2-260C-1 YEAR	0 to 85	LVPE502

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
