# Versatile Link The Versatile Fiber Optic Connection

## Technical Data

---

### HFBR-0501 Series

---

#### Features

- Low Cost Fiber Optic Components
- Enhanced Digital Links dc-5 MBd
- Extended Distance Links up to 120 m at 40 kBd
- Low Current Link: 6 mA Peak Supply Current
- Horizontal and Vertical Mounting
- Interlocking Feature
- High Noise Immunity
- Easy Connecting Simplex, Duplex, and Latching Connectors
- Flame Retardant
- Transmitters Incorporate a 660 nm Red LED for Easy Visibility
- Compatible with Standard TTL Circuitry

#### Applications

- Reduction of Lightning/Voltage Transient Susceptibility
- Motor Controller Triggering
- Data Communications and Local Area Networks
- Electromagnetic Compatibility (EMC) for Regulated Systems: FCC, VDE, CSA, etc.
- Tempest-Secure Data Processing Equipment

- Isolation in Test and Measurement Instruments
- Error Free Signalling for Industrial and Manufacturing Equipment
- Automotive Communications and Control Networks
- Noise Immune Communication in Audio and Video Equipment

#### Description

The Versatile Link series is a complete family of fiber optic link components for applications requiring a low cost solution. The HFBR-0501 series includes transmitters, receivers, connectors and cable specified for easy design. This series of components is ideal for solving problems with voltage isolation/insulation, EMI/RFI immunity or data security. The optical link design is simplified by the logic compatible receivers and complete specifications for each component. The key optical and electrical parameters of links configured with the HFBR-0501 family are fully guaranteed from 0° to 70°C.

A wide variety of package configurations and connectors provide the designer with numerous mechanical solutions to meet application requirements. The

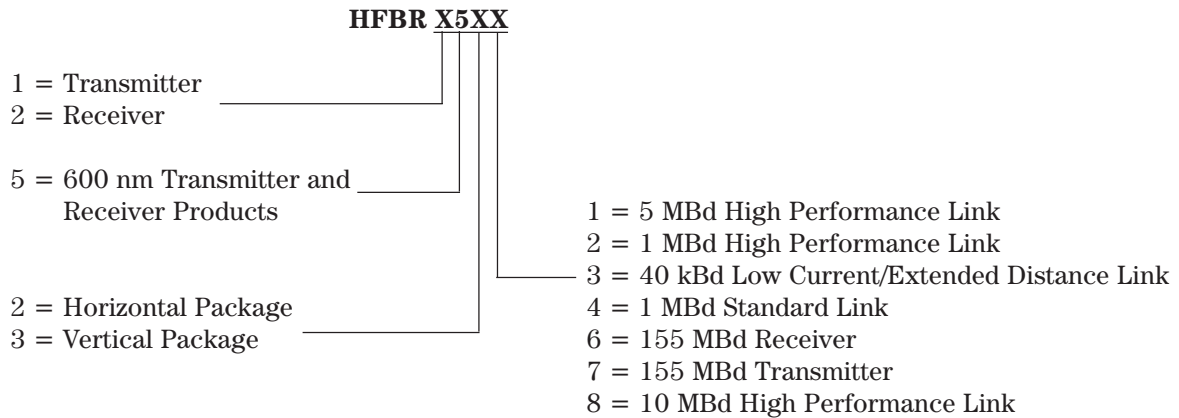

transmitter and receiver components have been designed for use in high volume/low cost assembly processes such as auto insertion and wave soldering.

Transmitters incorporate a 660 nm LED. Receivers include a monolithic dc coupled, digital IC receiver with open collector Schottky output transistor. An internal pullup resistor is available for use in the HFBR-25X1/2/4 receivers. A shield has been integrated into the receiver IC to provide additional, localized noise immunity.

Internal optics have been optimized for use with 1 mm diameter plastic optical fiber. Versatile Link specifications incorporate all connector interface losses. Therefore, optical calculations for common link applications are simplified.

## Package and Handling Information

The compact Versatile Link package is made of a flame retardant VALOX® UL V-0 material (UL file # E121562) material and uses the same pad layout as a standard, eight pin dual-in-line package. Vertical and horizontal mountable parts are available. These low profile Versatile Link packages are

stackable and are enclosed to provide a dust resistant seal. Snap action simplex, simplex latching, duplex, and duplex latching connectors are offered with simplex or duplex cables.

### Package Orientation

Performance and pinouts for the vertical and horizontal packages are identical. To provide additional attachment support for the

vertical Versatile Link housing, the designer has the option of using a self-tapping screw through a printed circuit board into a mounting hole at the bottom of the package. For most applications this is not necessary.

### Package Housing Color

Versatile Link components and simplex connectors are color coded to eliminate confusion

when making connections. Receivers are blue and transmitters are gray, except for the HFBR-15X3 transmitter, which is black.

All of the above transmitters and receivers are also available in black versions for applications where improved housing opacity is required due to very bright ambient light or bright flashes of light.

### Handling

Versatile Link components are auto-insertable. When wave soldering is performed with

Versatile Link components, the optical port plug should be left in to prevent contamination of the port. Water soluble fluxes, not rosin based fluxes, are recommended for use with Versatile Link components.

Versatile Link components are moisture sensitive devices and are shipped in a moisture sealed bag. If the components are exposed to air for an extended period of time, they may require a baking step before the soldering process. Refer to the special labeling on the shipping tube for details.

### Recommended Chemicals for Cleaning/Degreasing

*Alcohols:* methyl, isopropyl, isobutyl. *Aliphatics:* hexane, heptane, *Other:* soap solution, naphtha.

*Do not use* partially halogenated hydrocarbons such as 1,1,1 trichloroethane, ketones such as MEK, acetone, chloroform, ethyl acetate, methylene dichloride, phenol, methylene chloride, or N-methylpyrrolidone. Also, HP does not recommend the use of cleaners that use halogenated hydrocarbons because of their potential environmental harm.

### Interlocked (Stacked) Assemblies (refer to Figure 1)

Horizontal packages may be stacked by placing units with pins facing upward. Initially engage the interlocking mechanism by sliding the L bracket body from above into the L slot body of the lower package. Use a straight

edge, such as a ruler, to bring all stacked units into uniform alignment. This technique prevents potential harm that could occur to fingers and hands of assemblers from the package pins. Stacked horizontal packages can be disengaged if necessary. Repeated stacking and unstacking causes no damage to individual units.

To stack vertical packages, hold one unit in each hand, with the pins facing away and the optical ports on the bottom. Slide the L bracket unit into the L slot unit. The straight edge used for horizontal package alignment is not needed.

**Notes:**

1. The propagation delay for one metre of cable is typically 5 ns.
2. Typical propagation delay is measured at  $P_R = -15$  dBm.
3. Estimated typical link life expectancy at 40°C exceeds 10 years at 60 mA.

The graph shows the relationship between forward current and cable length for a 100 ohm cable. The y-axis represents forward current  $I_F$  in mA on a logarithmic scale from 5 to 100. The x-axis represents cable length  $l$  in metres on a linear scale from 0 to 50. Two solid lines represent the temperature range 0°C to 70°C, and two dashed lines represent 25°C. Arrows indicate the 'OVERDRIVE' and 'UNDERDRIVE' regions.

### Notes:

- Optical flux, P (dBm) = 10 Log [P (μW)/1000 μW].
- Measured at the end of the fiber optic cable with large area detector.
- R<sub>L</sub> is open.
- Pulsed LED operation at I<sub>F</sub> > 80 mA will cause increased link t<sub>PLH</sub> propagation delay time. This extended t<sub>PLH</sub> time contributes to increased pulse width distortion of the receiver output signal.

### Notes:

- For  $I_{FPK} > 80$  mA, the duty factor must be such as to keep  $I_{Fdc} \leq 80$  mA. In addition, for  $I_{FPK} > 80$  mA, the following rules for pulse width apply:  
 $I_{FPK} \leq 160$  mA: Pulse width  $\leq 1$  ms  
 $I_{FPK} > 160$  mA: Pulse width  $\leq 1$   $\mu$ S, period  $\geq 20$   $\mu$ S.
- The propagation delay for one meter of cable is typically 5 ns.
- Estimated typical link life expectancy at 40°C exceeds 10 years at 60 mA.
- Pulsed LED operation at  $I_{FPK} > 80$  mA will cause increased link  $t_{PLH}$  propagation delay time. This extended  $t_{PLH}$  time contributes to increased pulse width distortion of the receiver output signal.

Lead Soldering Cycle	Temp.		260	°C	Note 1
	Time		10	sec	
Forward Input Current	$I_{FPK}$		1000	mA	Note 2, 3
	$I_{Fdc}$		80		
Reverse Input Voltage	$V_{BR}$		5	V	

### Notes:

- 1.6 mm below seating plane.
- Recommended operating range between 10 and 750 mA.
- 1  $\mu$ s pulse, 20  $\mu$ s period.

**All HFBR-15XX LED transmitters are classified as IEC 825-1 Accessible Emission Limit (AEL) Class 1 based upon the current proposed draft scheduled to go into effect on January 1, 1997. AEL Class 1 LED devices are considered eye safe. Contact your Hewlett-Packard sales representative for more information.**

## Transmitter Electrical/Optical Characteristics 0°C to 70°C unless otherwise specified.

For forward voltage and output power vs. drive current graphs.

Parameter	Symbol	Min.	Typ.	Max.	Units	Conditions	Ref.
Transmitter Output Optical Power	$P_T$	-11.2 -13.6 -35.5		-5.1 -4.5	dBm	$I_{Fdc} = 60$ mA, 25°C $I_{Fdc} = 60$ mA $I_{Fdc} = 2$ mA, 0-70°C	Notes 3, 4 Fig. 9, 10
Output Optical Power Temperature Coefficient	$\Delta P_T / \Delta T$		-0.85		%/°C		
Peak Emission Wavelength	$\lambda_{PK}$		660		nm		
Forward Voltage	$V_F$	1.45	1.67	2.02	V	$I_{Fdc} = 60$ mA	
Forward Voltage Temperature Coefficient	$\Delta V_F / \Delta T$		-1.37		mV/°C		Fig. 18
Effective Diameter	D		1		mm		
Numerical Aperture	NA		0.5				
Reverse Input Breakdown Voltage	$V_{BR}$	5.0	11.0		V	$I_{Fdc} = 10$ $\mu$ A, $T_A = 25$ °C	
Diode Capacitance	$C_O$		86		pF	$V_F = 0$ , $f = 1$ MHz	
Rise Time	$t_r$		80		ns	10% to 90%, $I_F = 60$ mA	Note 1
Fall Time	$t_f$		40				

### Note:

- Rise and fall times are measured with a voltage pulse driving the transmitter and a series connected 50  $\Omega$  load. A wide bandwidth optical to electrical waveform analyzer, terminated to a 50  $\Omega$  input of a wide bandwidth oscilloscope, is used for this response time measurement.

## HFBR-25X3 Receiver

Pin #	Function
1	V <sub>O</sub>
2	Ground
3	Open
4	V <sub>CC</sub>
5	Do not connect
8	Do not connect

**Note:** Pins 5 and 8 are for mounting and retaining purposes only. Do not electrically connect these pins.

### Notes:

- Measured at the end of the fiber optic cable with large area detector.
- Optical flux, P (dBm) = 10 Log P( $\mu$ W)/1000  $\mu$ W.
- Because of the very high sensitivity of the HFBR-25X3, the digital output may switch in response to ambient light levels when a cable is not occupying the receiver optical port. The designer should take care to filter out signals from this source if they pose a hazard to the system.
- Including current in 3.3 k pull-up resistor.
