Single-Supply DIFFERENCE AMPLIFIER

FEATURES

- SWING: to Within 200mV of Either Output Rail
- LOW OFFSET DRIFT: ±3µV/°C
- LOW OFFSET VOLTAGE: ±250µV
- HIGH CMR: 94dB
- LOW GAIN ERROR: 0.01%
- LOW GAIN ERROR DRIFT: 1ppm/°C
- WIDE SUPPLY RANGE:
  Single: 2.7V to 20V
  Dual: ±1.35V to ±10V
- MSOP-8 PACKAGE

APPLICATIONS

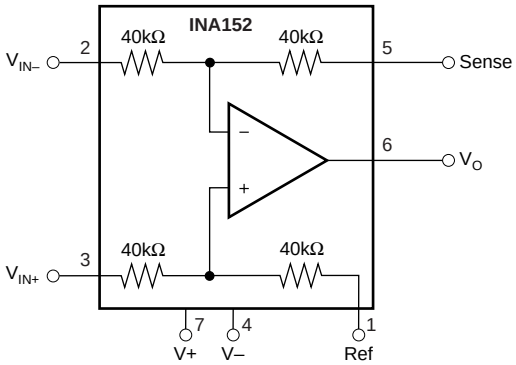
- DIFFERENCE INPUT AMPLIFIER BUILDING BLOCK
- UNITY-GAIN INVERTING AMPLIFIER
- GAIN = 1/2
- AMPLIFIER GAIN = 2 AMPLIFIER
- SUMMING AMPLIFIER
- SYNCHRONOUS DEMODULATOR
- CURRENT AND DIFFERENTIAL LINE RECEIVER
- VOLTAGE-CONTROLLED CURRENT SOURCE
- BATTERY-POWERED SYSTEMS
- LOW-COST AUTOMOTIVE INSTRUMENTATION

DESCRIPTION

The INA152 is a small (MSOP-8), low-power, unity-gain difference amplifier consisting of a CMOS op amp and a precision resistor network. The on-chip resistors are laser trimmed for accurate gain and high common-mode rejection. Excellent TCR tracking of the resistor maintains gain accuracy and common-mode rejection over temperature. The input common-mode voltage range extends to above the positive and negative rails and the output swings to within 50mV of either rail.

The difference amplifier is the foundation of many commonly used circuits. The INA152 provides precision circuit function without using an expensive precision network.

The INA152 is specified for operation over the extended industrial temperature range, –40°C to +85°C.



Printed in U.S.A. January, 2001

SPECIFICATIONS: $V_S = \pm 10V$

T_A = +25°C, V_S = ±10V, R_L = 10kΩ connected to ground, and reference pin connected to ground, unless otherwise noted.

PARAMETER	CONDITIONS	INA152EA MIN	INA152EA TYP	INA152EA MAX	UNITS
OFFSET VOLTAGE	RTO[1] [2]				
Input Offset Voltage	V_{CM} = 0V		±250	±1500	µV
vs Temperature	T_A = –40°C to +85°C		±3	±15	µV/°C
vs Power Supply	V_S = ±1.35V to ±10V		5	30	µV/V
vs Time			0.5		µV/mo
INPUT VOLTAGE RANGE[3]					
Common-Mode Voltage Range					
	$V_{IN+} - V_{IN-}$ = 0V	2(V–)		2(V+) – 2	V
Common-Mode Rejection		80	94		dB
INPUT IMPEDANCE[4]					
Differential			80		kΩ
Common-Mode			80		kΩ
OUTPUT NOISE VOLTAGE[1] [5]	RTO				
f_O = 10Hz			97		nV/√Hz
f_O = 1kHz			87		nV/√Hz
f_B = 0.1Hz to 10Hz			2.4		µVp-p
GAIN					
Initial[6]			1		V/V
Gain Error			±0.01	±0.1	%

Voltage Range		±1.35		±10	V
		2.7		20	V
Current, Quiescent	I_O = 0mA		500	650	µA
TEMPERATURE RANGE					
Specification		–40		+85	°C
Operating		–55		+125	°C
θ_{JA}, Junction to Ambient			150		°C/W

NOTES: (1) Referred to output in unity-gain difference configuration. Note that this circuit has a gain of 2 for the op amp's offset voltage and noise voltage. (2) Includes effects of amplifier's input bias and offset currents. (3) Limit I_{IN} through 40kΩ resistors to 1mA. (4) 40kΩ resistors are ratio matched but have ±20% absolute value. (5) Includes effects of amplifier's input current noise and thermal noise contribution of resistor network. (6) Connected as difference amplifier.

SPECIFICATIONS: V_S = +5V

T_A = +25°C, V_S = +5V, Ref connected to V_S/2, R_L = 10kΩ connected to V_S/2, unless otherwise noted.

PARAMETER	CONDITIONS	INA152EA MIN	INA152EA TYP	INA152EA MAX	UNITS

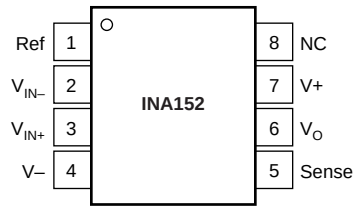
NOTES: (1) Referred to output in unity-gain difference configuration. Note that this circuit has a gain of 2 for the op amp's offset voltage and noise voltage. (2) Includes effects of amplifier's input bias and offset currents. (3) Limit I_{IN} through 40kΩ resistors to 1mA.

PIN CONFIGURATION

Top View **MSOP-8**



NC = No Internal Connection

ELECTROSTATIC DISCHARGE SENSITIVITY

This integrated circuit can be damaged by ESD. Burr-Brown recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

ABSOLUTE MAXIMUM RATINGS[1]

Supply Voltage, V+ to V– ..... +22V
Signal Input Terminals ..... +20V Continuous
Output Short-Circuit to GND Duration ..... Continuous
Operating Temperature ..... –55°C to +125°C
Storage Temperature ..... –55°C to +125°C
Junction Temperature ..... +150°C
Lead Temperature (soldering, 10s) ..... +300°C

PACKAGE/ORDERING INFORMATION

PRODUCT	PACKAGE	PACKAGE DRAWING NUMBER	SPECIFIED TEMPERATURE RANGE	PACKAGE MARKING	ORDERING NUMBER[1]	TRANSPORT MEDIA
INA152EA	MSOP-8	337	–40°C to +85°C	B52	INA152EA/250	Tape and Reel
"	"	"	"	"	INA152EA/2K5	Tape and Reel

NOTE: (1) Models with a slash (/) are available only in Tape and Reel in the quantities indicated (e.g., /2K5 indicates 2500 devices per reel). Ordering 2500 pieces of "INA152EA/2K5" will get a single 2500-piece Tape and Reel.

APPLICATIONS INFORMATION

The INA152 is a low-power difference amplifier suitable for a wide range of general-purpose applications. Figure 1 shows the basic connections required for operation of the INA152. Decoupling capacitors are strongly recommended in applications with noisy or high-impedance power supplies. The capacitors should be placed close to the device pins, as shown in Figure 1.

As shown in Figure 1, the differential input signal is connected to pins 2 and 3. The source impedances connected to the inputs must be nearly equal to assure good common-mode rejection. An 8Ω mismatch in source impedance will degrade the common-mode rejection of a typical device to approximately 80dB (a 16Ω mismatch degrades CMR to 74dB). If the source has a known impedance mismatch, an additional resistor in series with the opposite input can be used to preserve good common-mode rejection.

The INA152's internal resistors are accurately ratio trimmed to match. That is, R_1 is trimmed to match R_2, and R_3 is trimmed to match R_4. However, the absolute values may not be equal ($R_1 + R_2$ may be slightly different than $R_3 + R_4$). Thus, large series resistors on the input (greater than 250Ω), even if well matched, will degrade common-mode rejection.

Circuit-board layout constraints might suggest possible variations in connections of the internal resistors. It might appear that pins 1 and 3 could be interchanged, however, because of the ratio trimming technique used (see paragraph above) CMRR will be degraded. If pins 1 and 3 are interchanged, pins 2 and 5 must also be interchanged to maintain proper ratio matching.

OPERATING VOLTAGE

The INA152 operates from single (+2.7V to +20V) or dual (±1.35V to ±10V) supplies with excellent performance. Specifications are production tested with +5V and ±10V supplies. Most behavior remains unchanged throughout the full operating voltage range. Parameters that vary significantly with operating voltage are shown in the typical performance curves.

INPUT VOLTAGE

The INA152 can accurately measure differential signals that are above and below the supply rails. Linear common-mode range extends from 2 • [(V+) – 1V] to 2 • (V–) (nearly twice the supplies). See the typical performance curve, "Input Common-Mode Voltage vs Output Voltage".

OFFSET VOLTAGE TRIM

The INA152 is laser trimmed for low offset voltage and drift. Most applications require no external offset adjustment. Figure 2 shows an optional circuit for trimming the output offset voltage. The output is referred to the output reference terminal (pin 1), which is normally grounded. A voltage applied to the Ref terminal will be summed with the output signal. This can be used to null offset voltage, as shown in Figure 2. The source impedance of a signal applied to the Ref terminal should be less than 10Ω to maintain good common-mode rejection.

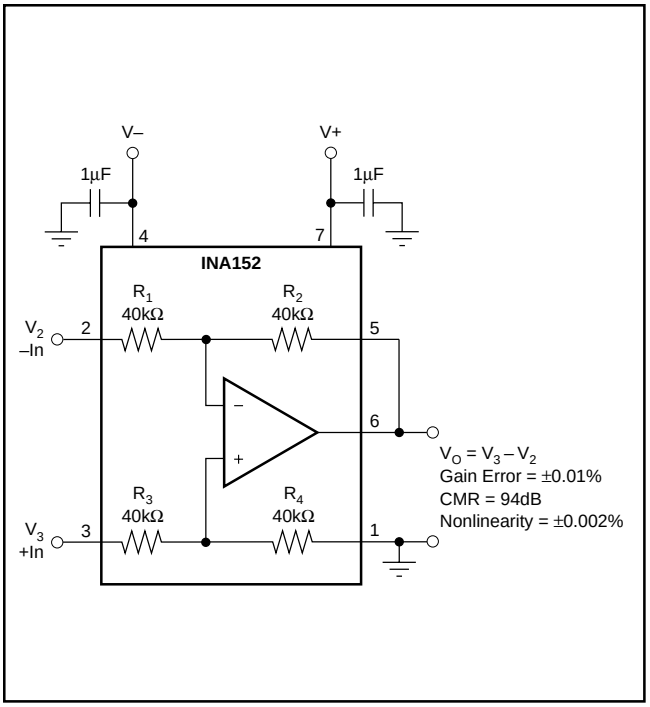

FIGURE 1. Precision Difference Amplifier (Basic Power Supply and Signal Connections).

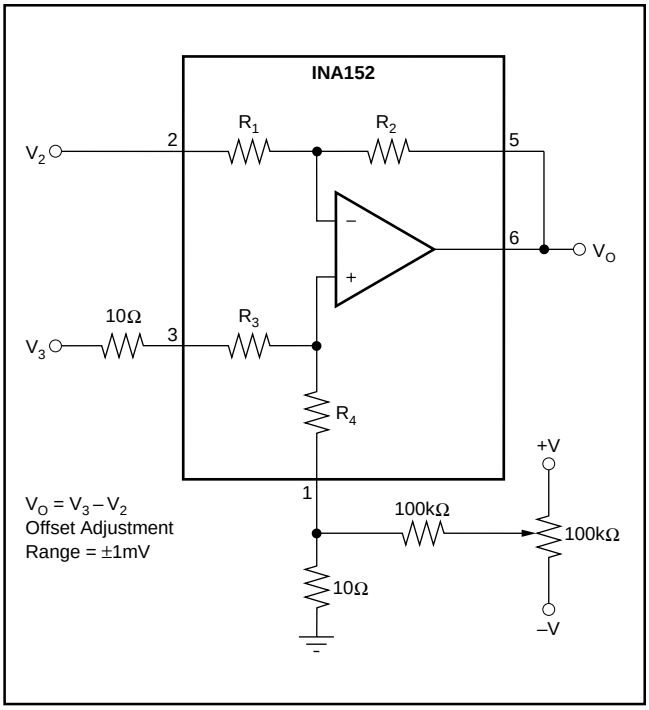

FIGURE 2. Offset Adjustment.

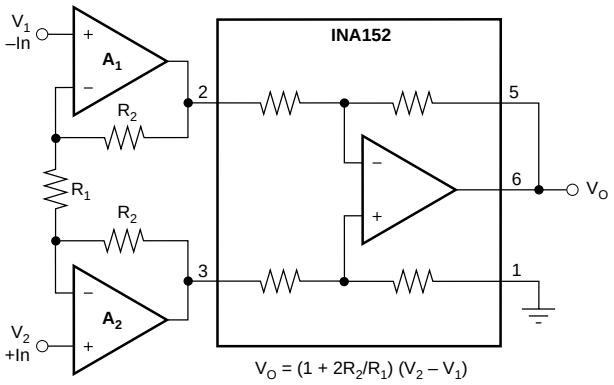
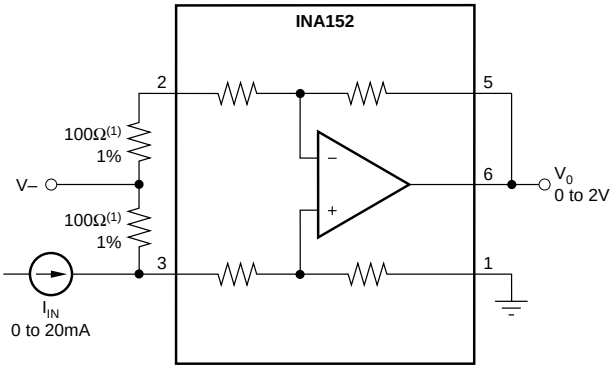
TYPICAL APPLICATIONS



The INA152 can be combined with op amps to form a complete Instrumentation Amplifier (IA) with specialized performance characteristics. Texas Instruments offers many complete high performance IAs. Products with related performances are shown at the right in the table below.

A_1, A_2	FEATURE	SIMILAR COMPLETE TEXAS INSTRUMENTS IA
OPA2227	Low Noise	INA163
OPA129	Ultra Low Bias Current (fA)	INA116
OPA2277	Low Offset Drift, Low Noise	INA114, INA128
OPA2130	Low Power, FET-Input (pA)	INA121
OPA2234	Single Supply, Precision, Low Power	INA122, INA118

FIGURE 3. Precision Instrumentation Amplifier.



NOTE: (1) Input series resistors should be less than 250Ω (1% max mismatch) to maintain excellent CMR. With 100Ω resistors, gain error is increased to 0.5%.

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
