

6.25Gbps, 1.8V PC Board Equalizer

General Description

The MAX3785 6.25Gbps equalizer operates from a single 1.8V supply and compensates for transmission-medium losses encountered with FR-4 transmission lines. Optimized for low-voltage, high-density, DC-coupled interconnections between the line card and switch card, the MAX3785 enables a system upgrade path while maintaining a legacy rate of 2.5Gbps to 3.125Gbps. Roughly the size of two 0603 passive components, the MAX3785 easily provides placement and routing flexibility.

The MAX3785 is composed of an equalizer, limiting amplifier, and output driver. For data rates of 3.2Gbps and lower, the MAX3785 equalizes signals for spans up to 40in of FR-4 board material. For data rates up to 6.25Gbps, the MAX3785 compensates for 30in of FR-4 board material. The MAX3785 is coding independent, functioning equally well for 8b/10b or scrambled signals.

The MAX3785 features DC-coupled current-mode logic (CML) data inputs and outputs. It is packaged in a tiny 1.5mm × 1.5mm chip-scale package (UCSP™) and a 6-pin TDFN package.

Applications

HSBI for ≤ 6.4Gbps
Double IEEE 802.3ae XAUI
Double STM-16/OC-48

UCSP is a trademark of Maxim Integrated Products, Inc.

Features

- ◆ Single 1.8V Supply
- ◆ Very Low Power, 60mW
- ◆ Spans 30in with FR-4 at 6.25Gbps
- ◆ Operates from 1.0Gbps to 6.4Gbps
- ◆ Coding Independent, 8b/10b or Scrambled
- ◆ DC-Coupled CML Inputs and Outputs
- ◆ Small 1.5mm × 1.5mm Footprint

Ordering Information

| PART | TEMP RANGE | PIN-PACKAGE |
|-------------|----------------|----------------|
| MAX3785UBL | 0°C to +85°C | 6 UCSP (3 × 3) |
| MAX3785UWL+ | 0°C to +85°C | 6 WLP |
| MAX3785UTT | 0°C to +85°C | 6 TDFN-EP* |
| MAX3785UTT+ | 0°C to +85°C | 6 TDFN-EP* |
| MAX3785ITT | -20°C to +85°C | 6 TDFN-EP* |
| MAX3785ITT+ | -20°C to +85°C | 6 TDFN-EP* |

+ Denotes a lead-free/RoHS-compliant package.

*EP = Exposed pad.

Pin Configurations

Typical Application Circuit

6.25Gbps, 1.8V PC Board Equalizer

ABSOLUTE MAXIMUM RATINGS

Supply Voltage, V_{CC} to GND.....-0.5V to +6.0V
 Continuous Output Current (OUT+, OUT-)-25mA to +25mA
 Input Voltage (IN+, IN-)-0.5V to (V_{CC} + 0.5V)
 Operating Ambient Temperature Range
 (UBL, UTB)..... 0°C to +85°C

Operating Ambient Temperature Range (ITT).....-20°C to +85°C
 Storage Ambient Temperature Range.....-55°C to +150°C
 Continuous Power Dissipation (T_A = +70°C)
 6-Pin TDFN (derate 24.4mW above +70°C).....1.95W

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS

(Typical values measured at V_{CC} = 1.8V and T_A = +25°C. Specifications guaranteed over specified operating conditions.)
 (See *Operating Conditions* table.)

| PARAMETER | CONDITIONS | MIN | TYP | MAX | UNITS |
|--|--|-------------------------|------|-------------------------|-------------------|
| Supply Current | | | 35 | 55 | mA |
| Input Swing (IN) | Measured differentially at data source before encountering loss (Point A in Figure 1) (Note 1) | 400 | | 1600 | mV _{P-P} |
| Input Common-Mode Voltage Range | (Note 1) | $V_{CC} - (I_{NMAX}/4)$ | | $V_{CC} - (I_{NMIN}/4)$ | V |
| Input Return Loss | 100MHz to 3.2GHz, power off | | 15 | | dB |
| Differential Input Resistance | IN+ and IN- | 85 | 100 | 115 | Ω |
| Output Swing | Measured differentially at OUT+ and OUT- with 50 Ω \pm 1% load at each side | 450 | | 800 | mV _{P-P} |
| Output Resistance | OUT+ or OUT- | 42 | 50 | 58 | Ω |
| Output Return Loss | 100MHz to 3.2GHz, IN+ = high | | 14 | | dB |
| Output Transition Time (t_r , t_f) | 20% to 80% (Note 2) | 30 | 40 | 55 | ps |
| Residual Deterministic Jitter (Notes 1, 3, 4) | 2.5Gbps, 3.2Gbps, 5.0Gbps; 0in to 30in FR-4 400mV _{P-P} \leq IN \leq 1600mV _{P-P} | | 0.10 | 0.15 | UI |
| | 2.5Gbps, 3.2Gbps; 40in FR-4 400mV _{P-P} \leq IN \leq 1600mV _{P-P} | | 0.15 | 0.20 | |
| | 6.25Gbps; 0in to 30in FR-4 600mV _{P-P} \leq IN \leq 1600mV _{P-P} | | 0.15 | 0.25 | |
| | 6.25Gbps; 0in to 30in FR-4 IN = 400mV _{P-P} | | 0.20 | 0.30 | |
| Output Random Jitter | (Notes 1, 2) | | 0.75 | 1.0 | ps _{RMS} |
| Low-Frequency Cutoff Frequency | | | 50 | | kHz |
| Latency | | | 200 | | ps |
| Maximum Bit Rate | (Note 1) | 6.25 | 6.4 | | Gbps |
| Minimum Bit Rate | (Note 1) | | 1.0 | 2.5 | Gbps |

Note 1: Guaranteed by design and characterization.

Note 2: Using input pattern 0000011111 at 6.25Gbps.

Note 3: Difference in deterministic jitter between data source and equalizer output, evaluated at 2.5Gbps, 3.2Gbps, 5Gbps, and 6.25Gbps. Pattern used: PRBS (2⁷), ninety-six 0s, 1, 0, 1, 0, PRBS (2⁷), ninety-six 1s, 0, 1, 0, 1.

Note 4: Signal is applied differentially at input to a 6-mil wide, loosely coupled stripline. Deterministic jitter at the output of the transmission line is from media-induced loss, not from clock source modulation (see Figure 1).

MAX3785UBL Pin Description

| PIN | NAME | FUNCTION (MAX3785UBL) |
|-----|-----------------|---------------------------|
| A1 | IN- | Negative Data Input, CML |
| A2 | GND | Supply Ground |
| A3 | OUT- | Negative Data Output, CML |
| C1 | IN+ | Positive Data Input, CML |
| C2 | V _{CC} | Supply Voltage |
| C3 | OUT+ | Positive Data Output, CML |

Functional Description

The MAX3785 6.25Gbps PC board equalizer consists of an equalizer, limiting amplifier, offset driver, and offset cancellation circuit (see Figure 2). The equalizer block compensates for the attenuation caused by the PC board. The limiting amplifier squares up the signal at the output of the equalizer block. The offset cancellation circuit corrects for internal offset in the limiting amplifier to minimize pulse-width distortion. This introduces a low-frequency cutoff. The data must achieve a 50% mark/space ratio in less than 100 μ s. The specified minimum differential input must be maintained to avoid oscillation.

Input and Output Structures

An equivalent DC input circuit is shown in Figure 3. It has an equivalent DC differential input resistance of 100 Ω . The output buffer is implemented using current-mode logic (CML), as shown in Figure 4.

Package Description

The chip-scale package (UCSP) has a bump pitch of 0.5mm (19.7 mils) and a bump diameter of 0.3mm (12

mils). Lay out the solder pad spacing on 0.5mm (19.7 mils), a pad size of 0.25mm (10 mils) and a solder

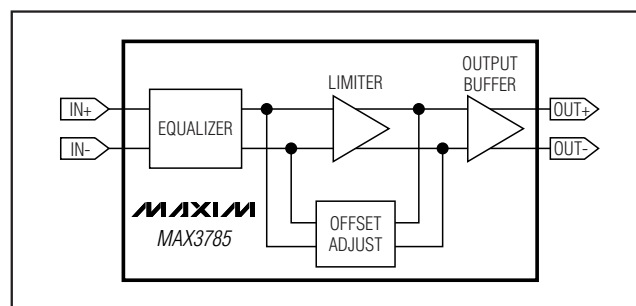

Figure 2. Functional Diagram of the MAX3785

mask opening of 0.33mm (13 mils). Round or square pads are permissible. For detailed information on UCSP layout and handling, go to Maxim's website, www.maxim-ic.com. The enclosed package description was accurate at the time of publication. For the MAX3785, all the balls shown in row B of the drawing are unpopulated. See the *Package Information* section for the latest package information.

MAX3785UTT Pin Description

| PIN | NAME | FUNCTION (MAX3785UTT) |
|-----|-----------------|----------------------------|
