

LCD & Camera EMI Filter Array with ESD Protection

Features

- High bandwidth, high RF rejection filter array
- Six channels of EMI filtering
- Utilizes *Praetorian*™ inductor-based design technology for true L-C filter implementation
- *OptiGuard*™ coating for improved reliability
- $\pm 15\text{kV}$ ESD protection on each channel (IEC 61000-4-2 Level 4, contact discharge)
- $\pm 30\text{kV}$ ESD protection on each channel (HBM)
- Better than 40dB of attenuation at 1GHz
- Chip Scale Package features extremely low lead inductance for optimum filter and ESD performance
- 15-bump, 3.006mm x 1.376mm footprint Chip Scale Package (CM1451-06CS/CP)
- Lead-free version available

Applications

- LCD and Camera data lines in mobile handsets
- I/O port protection for mobile handsets, notebook computers, PDAs, etc.
- EMI filtering for data phones in cell phones, PDAs or notebook computers
- Wireless handsets / cell phones
- Wireless Handsets
- Handheld PCs/PDAs
- LCD and camera modules

Product Description

The CM1451 is an inductor-capacitor (L-C) based EMI filter array with integrated ESD protection in CSP form factor. The CM1451-06 is configured in a 6 channel format. Each EMI filter channel of the CM1451 is implemented as a 5-pole L-C filter where the component values are 10pF-17nH-10pF-17nF-10pF. The CM1451's roll-off frequency at -10dB attenuation is 400MHz and can be used in applications where the data rates are as high as 120Mbps while providing greater than 35dB over the 800MHz to 2.7GHz frequency range. The parts integrate ESD protection diodes on every pin, which provide a very high level of protection for sensitive electronic components that may be subjected to electrostatic discharge (ESD). The ESD protection diodes connected to the filter ports are designed and characterized to safely dissipate ESD strikes of $\pm 15\text{kV}$, beyond the Level 4 requirement of the IEC61000-4-2 international standard. Using the MIL-STD-883 (Method 3015) specification for Human Body Model (HBM) ESD, the pins are protected for contact discharges at greater than $\pm 30\text{kV}$.

This device is particularly well suited for portable electronics (e.g. wireless handsets, PDAs) because of its small package format and easy-to-use pin assignments. In particular, the CM1451 is ideal for EMI filtering and protecting data and control lines for the LCD display and camera interface in wireless handsets.

The CM1451 incorporates *OptiGuard*™ which results in improved reliability at assembly. The CM1451 is available in a space saving, low profile Chip Scale Package with optional lead-free finishing.

Electrical Schematic

* See Package/Pinout Diagram for expanded pin information.

V_{ESD}	In-system ESD Withstand Voltage a) Human Body Model, MIL-STD-883, Method 3015 b) Contact Discharge per IEC 61000-4-2 Level 4	Notes 2,4 and 5	± 30 ± 15			kV kV
V_{CL}	Clamping Voltage during ESD Discharge MIL-STD-883 (Method 3015), 8kV Positive Transients Negative Transients	Notes 2,3,4 and 5		+12 -7		V V

Note 1: $T_A=25^\circ C$ unless otherwise specified.

Note 2: ESD applied to input and output pins with respect to GND, one at a time.

Note 3: Clamping voltage is measured at the opposite side of the EMI filter to the ESD pin. For example, if ESD is applied to Pin A1, then clamping voltage is measured at Pin C1.

Note 4: Unused pins are left open.

Note 5: These parameters are guaranteed by design and characterization.
