

Features

- True dual-ported memory cells, which allow simultaneous reads of the same memory location
- 1 K × 8 organization
- 0.65 micron CMOS for optimum speed and power
- High speed access: 15 ns
- Low operating power: $I_{CC} = 110$ mA (maximum)
- Fully asynchronous operation
- Automatic power-down
- Master CY7C130/130A/CY7C131/131A easily expands data bus width to 16 or more bits using slave CY7C140/CY7C141
- $\overline{BUSY}$ output flag on CY7C130/130A/CY7C131/131A; $\overline{BUSY}$ input on CY7C140/CY7C141
- $\overline{INT}$ flag for port-to-port communication
- Available in 48-pin DIP (CY7C130/130A/140), 52-pin PLCC, 52-pin TQFP
- Pb-free packages available

Functional Description

The CY7C130/130A/CY7C131/131A/CY7C140^[1] and CY7C141 are high speed CMOS 1 K by 8 dual-port static RAMs. Two ports are provided permitting independent access to any location in memory. The CY7C130/130A/CY7C131/131A can be used as either a standalone 8-bit dual-port static RAM or as a master dual-port RAM in conjunction with the CY7C140/CY7C141 slave dual-port device in systems requiring 16-bit or greater word widths. It is the solution to applications requiring shared or buffered data, such as cache memory for DSP, bit-slice, or multi-processor designs.

Each port has independent control pins; chip enable ($\overline{CE}$), write enable ($\overline{R/W}$), and output enable ($\overline{OE}$). Two flags are provided on each port, $\overline{BUSY}$ and $\overline{INT}$. $\overline{BUSY}$ signals that the port is trying to access the same location currently being accessed by the other port. $\overline{INT}$ is an interrupt flag indicating that data is placed in a unique location (3FF for the left port and 3FE for the right port). An automatic power down feature is controlled independently on each port by the chip enable ($\overline{CE}$) pins.

The CY7C130/130A and CY7C140 are available in 48-pin DIP. The CY7C131/131A and CY7C141 are available in 52-pin PLCC, 52-pin Pb-free PLCC, 52-pin PQFP, and 52-pin Pb-free PQFP.

Logic Block Diagram

Notes

1. CY7C130 and CY7C130A are functionally identical; CY7C131 and CY7C131A are functionally identical.
2. CY7C130/130A/CY7C131/131A (Master): $\overline{BUSY}$ is open drain output and requires pull-up resistor.
CY7C140/CY7C141 (Slave): $\overline{BUSY}$ is input.
3. Open drain outputs: pull-up resistor required.

Note

4. 15 and 25 ns version available only in PLCC/PQFP packages.

Maximum Ratings^[5]

Exceeding maximum ratings may shorten the useful life of the device. User guidelines are not tested.

Storage temperature -65 °C to +150 °C

Ambient temperature with power applied -55 °C to +125 °C

Supply voltage to ground potential (pin 48 to pin 24).....-0.5 V to +7.0 V

DC voltage applied to outputs in high Z State.....-0.5 V to +7.0 V

DC input voltage-3.5 V to +7.0 V

Output current into outputs (LOW) 20 mA

Static discharge voltage..... > 2001 V (per MIL-STD-883, method 3015)

Latch-up current > 200 mA

Operating Range

Range	Ambient Temperature	V _{CC}
Commercial	0 °C to +70 °C	5 V ± 10%
Industrial	-40 °C to +85 °C	5 V ± 10%
Military ^[6]	-55 °C to +125 °C	5 V ± 10%

Shaded areas contain preliminary information.

Notes

5. The voltage on any input or I/O pin cannot exceed the power pin during power up.

6. T_A is the "instant on" case temperature

7. See the last page of this specification for Group A subgroup testing information.

8. BUSY and INT pins only.

9. Duration of the short circuit should not exceed 30 seconds.

10. This parameter is guaranteed but not tested.

11. At f = f_{MAX}, address and data inputs are cycling at the maximum frequency of read cycle of 1/t_{RC} and using AC Test Waveforms input levels of GND to 3 V.

Capacitance^[10]

Parameter	Description	Test Conditions	Max	Unit
C_{IN}	Input capacitance	$T_A = 25\text{ }^{\circ}\text{C}$, $f = 1\text{ MHz}$, $V_{CC} = 5.0\text{ V}$	15	pF

Shaded areas contain preliminary information.

Notes

12. See the last page of this specification for Group A subgroup testing information.
13. Test conditions assume signal transition times of 5 ns or less, timing reference levels of 1.5 V, input pulse levels of 0 to 3.0 V and output loading of the specified I_{OL}/I_{OH} and 30 pF load capacitance.
14. 15 and 25 ns version available only in PLCC/PQFP packages.
15. AC Test Conditions use $V_{OH} = 1.6$ V and $V_{OL} = 1.4$ V.
16. This parameter is guaranteed but not tested.
17. At any given temperature and voltage condition for any given device, t_{HZCE} is less than t_{LZCE} and t_{HZOE} is less than t_{LZOE} .
18. t_{LZCE} , t_{LZWE} , t_{HZOE} , t_{LZOE} , t_{HZCE} and t_{HZWE} are tested with $C_L = 5$ pF as in part (b) of AC Test Loads. Transition is measured ± 500 mV from steady state voltage.
19. The internal write time of the memory is defined by the overlap of CS LOW and R/W LOW. Both signals must be low to initiate a write and either signal can terminate a write by going high. The data input setup and hold timing should be referenced to the rising edge of the signal that terminates the write.

Shaded areas contain preliminary information.

Notes

20. These parameters are measured from the input signal changing, until the output pin goes to a high-impedance state.

21. CY7C140/CY7C141 only.

22. A write operation on Port A, where Port A has priority, leaves the data on Port B's outputs undisturbed until one access time after one of the following:

BUSY on Port B goes HIGH.

Port B's address is toggled.

CE for Port B is toggled.

R/W for Port B is toggled during valid read.

Notes

30. These parameters are measured from the input signal changing, until the output pin goes to a high-impedance state.

31. CY7C140/CY7C141 only.

32. A write operation on Port A, where Port A has priority, leaves the data on Port B's outputs undisturbed until one access time after one of the following:
 BUSY on Port B goes HIGH.
 Port B's address is toggled.
 CE for Port B is toggled.
 R/W for Port B is toggled during valid read.

Switching Waveforms

Figure 5. Read Cycle No. 1^[33, 34]

Figure 6. Read Cycle No. 2^[33, 35]

Figure 7. Read Cycle No. 3^[34]

Notes

33. $R/\overline{W}$ is HIGH for read cycle.

34. Device is continuously selected, $\overline{CE} = V_{IL}$ and $\overline{OE} = V_{IL}$.

35. Address valid prior to or coincident with $\overline{CE}$ transition LOW.

Switching Waveforms *(continued)*

Figure 8. Write Cycle No. 1 (OE Three-States Data I/Os—Either Port)^[36, 37]

Figure 9. Write Cycle No. 2 (R/W Three-States Data I/Os—Either Port)^[38, 39]

Notes

36. The internal write time of the memory is defined by the overlap of $\overline{CS}$ LOW and $R/\overline{W}$ LOW. Both signals must be low to initiate a write and either signal can terminate a write by going high. The data input setup and hold timing should be referenced to the rising edge of the signal that terminates the write.
37. If OE is LOW during a R/W controlled write cycle, the write pulse width must be the larger of t_{PWE} or $t_{HZWE} + t_{SD}$ to allow the data I/O pins to enter high impedance and for data to be placed on the bus for the required t_{SD} .
38. These parameters are measured from the input signal changing, until the output pin goes to a high-impedance state.
39. If the CE LOW transition occurs simultaneously with or after the R/W LOW transition, the outputs remain in the high impedance state.

- CY7C** = Cypress SRAMs
- 13XX** = 131 or 131A = Part number identifier
- XX** = Speed = 55 or 15 or 25 ns
- XX** = Package type:
 - P = 48-pin Molded DIP
 - JX = 52-pin Plastic Leaded Chip Carrier (Pb-free)
 - NX = 52-pin Plastic Quad Flatpack (Pb-free)
 - N = 52-pin Plastic Quad Flatpack
- X** = Temperature Range:
 - C = Commercial
 - I = Industrial

Package Diagrams

Figure 14. 48-pin (600 Mil) Sidebrazed DIP D26

51-80044 *B

Figure 15. 52-pin Pb-free Plastic Leaded Chip Carrier J69

51-85004 *C

Package Diagrams (continued)

Figure 16. 48-pin (600 Mil) Molded DIP P25

Figure 17. 52-pin Pb-free Plastic Quad Flatpack N52

Acronyms

Acronym	Description
CE	chip enable
CMOS	complementary metal oxide semiconductor
DIP	dual in-line package
I/O	input/output
OE	output enable
PLCC	plastic leaded chip carrier
PQFP	plastic quad flat pack
SRAM	static random access memory
TQFP	thin quad flat pack
TTL	Transistor–transistor logic

Document Conventions

Units of Measure

Symbol	Unit of Measure
°C	degree Celcius
MHz	megahertz
μA	microamperes
mA	milliamperes
ms	milliseconds
mV	millivolts
ns	nanoseconds
pF	picofarad
V	volts
W	watts

Document History Page

Document Title: CY7C130/CY7C130A/CY7C131/CY7C131A 1K x 8 Dual-Port Static RAM Document Number: 38-06002				
Rev.	ECN No.	Orig. of Change	Submission Date	Description of Change
**	110169	SZV	09/29/01	Change from Spec number: 38-00027 to 38-06002
*A	122255	RBI	12/26/02	Power up requirements added to Maximum Ratings Information
*B	236751	YDT	See ECN	Removed cross information from features section
*C	325936	RUJ	See ECN	Added pin definitions table, 52-pin PQFP package diagram and Pb-free information
*D	393153	YIM	See ECN	Added CY7C131-15JI to ordering information Added Pb-Free parts to ordering information: CY7C131-15JXI
*E	2623540	VKN/PYRS	12/17/08	Added CY7C130A and CY7C131A parts Removed military information Updated ordering information table
*F	2897217	RAME	03/22/2010	Updated Ordering Information Updated Package Diagrams
*G	3054633	ADMU	10/11/2010	Updated Ordering Information and added Ordering Code Definitions . Updated Package Diagrams . Added Acronyms and Units of Measure . Minor edits and updated in new template.
*H	3402163	ADMU	10/12/2011	Removed pruned part CY7C131-25NC from Ordering Information Updated Package Diagrams .

Sales, Solutions, and Legal Information

Worldwide Sales and Design Support

Cypress maintains a worldwide network of offices, solution centers, manufacturer's representatives, and distributors. To find the office closest to you, visit us at [Cypress Locations](#).
