

Is Now Part of

ON Semiconductor®

**To learn more about ON Semiconductor, please visit our website at
www.onsemi.com**

Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (_), the underscore (_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at www.onsemi.com. Please email any questions regarding the system integration to Fairchild_questions@onsemi.com.

FSA801 — USB2.0 High-Speed (480 Mbps), UART, and Audio Switch with Negative Signal Capability

Features

- 3:1 Switch Handles:
 - Audio Headsets
 - UART
 - Up to Two High- and Low-Speed USB Data
- USB Charger Detection and Indication, Compliant with USB Battery Charging Specification, Rev 1.1
 - Supports Data Contact Detect (DCD)
- Negative-Swing-Capable Audio Channel
- Built-in Termination Resistors for Audio Pop Reduction
- Simple Switch Control Using Three Select Pins
- 28 V Over-Voltage Tolerance on V_{BUS}

Applications

- Cell Phones, MP3 Players, PDAs

Description

The FSA801 is a 3:1 USB accessory switch that enables USB data, stereo and mono audio, microphone, and UART data to share a common connector port. Two ports are designed for high-speed USB 2.0 signaling, while also capable of full-speed USB and UART communication. The architecture allows audio signals to swing below ground so a common USB and headphone jack can be used for personal media players and portable peripheral devices.

FSA801 detects wall chargers through a dedicated pin that provides the baseband with charger detection. The charger function is compliant with USB Battery Charging Specification, Rev 1.1, implementing Data Contact Detect (DCD) before detecting a charger. The FSA801 indicates if a Dedicated Charging Port (DCP) or a Charging Downstream Port (CDP) has been connected.

The FSA801 meets both USB Rev. 2.0 and micro-USB specifications.

Ordering Information

Part Number	Operating Temperature Range	Top Mark	Package
FSA801UMX	-40 to +85°C	KL	16-Lead Quad, 1.8 x 2.6 mm Ultrathin Molded Leadless Package (UMLP)

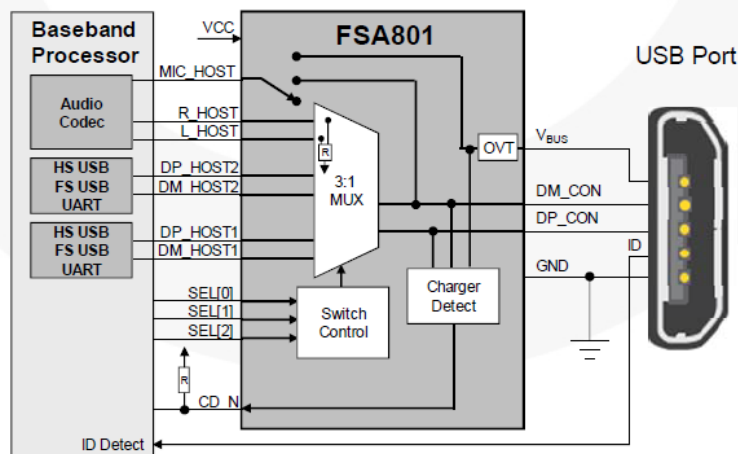

Figure 1. Typical Application

Functional Description

The FSA801 USB2.0 accessory switch is designed to consolidate wired accessories for portable devices, such as cellular telephones and portable audio players. The benefits of consolidation include reduced space requirements from a reduction of connectors and their size. The micro-USB connector, for example, reduces connector height and depth, allowing for slimmer overall designs. Using the USB industry standard and a common connector type for accessories such as chargers and headsets, greatly reduces the waste associated with new phone purchases by allowing re-use of the accessories.

Using just five wires for all connection types considerably reduces the cost of wired accessories and simplifies their construction. The FSA801 facilitates adopting this methodology because it is designed to redirect the DP/DM pins from the USB connector to one of three ports at the baseband's discretion. Additional flexibility is provided by the ability of the microphone line to be switched from either the DP_CON or VBUS pin.

The VBUS pin is protected up to 28 V without damage to the FSA801.

USB Charger Detection / Data Contact Detect

The FSA801 senses the presence of USB chargers per the *USB Battery Charging Specification, Version 1.1*. This specification uses V_{BUS} status and measurements on DP_CON / DM_CON pins to determine that a charging device might be attached. The 'CD_N' pin goes to a low state, indicating the presence of a charger. The charger-detect algorithm executes when V_{BUS} is valid. The charger-detection algorithm detects both Dedicated Charging Ports (DCP) and Charging Downstream Ports (CDP).

In this implementation, per the *USB Battery Charging Specification, Version 1.1*, the FSA801 implements Data Contact Detect (DCD) to insure the D+ and D- pins have made contact before the dedicated charger detection is performed.

Since the BC1.1 charger detection algorithm applies and detects signals on the D+ and D- lines, any additional loading effects from portable device host side of the switch would cause the results to be invalid. To prevent interference due to any loading, the FSA801 only performs charger detection when all switches are open.

Additionally, if all switches are open and V_{BUS} is present, the FSA801 does not close any switch path until the DCD circuitry detects contact with the D+/D- pins and the charger detection is complete. If the D+/D- pins never contact, but V_{BUS} is present, the USB switches cannot be closed when configuring from SEL[2:0]='000' to SEL[2:0]='001' or SEL[2:0]='010'. To override this blocking, first switch to a non-USB mode (one of the audio modes, SEL[2:0]='011', '100' or '101'), and then to the desired USB mode.

If the USB physical layer device that the FSA801 is connected to also performs DCD, it should not start until after the FSA801 has time to finish its detection function (since the delay between VBUS connection and D+/D- connection is not defined, this detection function time cannot be defined either).

Glitches on VBUS that occur when V_{BUS} is not driven (positive voltage spikes and on-off situations at the beginning of a cable attach) are automatically filtered by the DCD state machine timing.

To manually reset the FSA801 to search for a charger again, switch to SEL[2:0]='111' for a minimum of 30 μ s. After this state machine is reset, the next time that SEL[2:0]='000' (all switches open) for a minimum of 30 μ s, the FSA801 begins the charger detection sequence.

PLEASE NOTE: The FSA801 is guaranteed to operate down to 2.4 V. If the FSA801 V_{CC} is connected directly to a battery and falls below 2.4 V, the FSA801 may not correctly detect a charger. If a charger is applied, the V_{CC} should start to rise above 2.4 V. In this situation, the FSA801 does not automatically check for a charger again, so the FSA801 should be placed in SEL[2:0]='111' for 30 μ s (min.), then SEL[2:0]='000' for 30 μ s (min.) to perform the charger detection again.

Applications with Multiple USB Controllers

When operating with two USB controllers, it is recommended to configure the switches to OPEN before switching to the other (second) USB interface. The OPEN setting duration should be long enough for the accessory to go to a SE0 state, so when the switch is set to the other (second) USB port, the new controller re-enumerates.

Mode Descriptions

The FSA801 has three select pins to control the switching operations, SEL[0], SEL[1], and SEL[2] described in Table 1.

Table 1. Selection Truth Table

SEL[2]	SEL[1]	SEL[0]	Switch Action	Description
0	0	0	OPEN	Open all switch paths (device in low-power mode)
0	0	1	USB1, UART	Closes USB1 path to D+/D-, default condition ⁽¹⁾ - DP_CON connected to DP_HOST1 - DM_CON connected to DM_HOST1
0	1	0	USB2, UART	Closes USB2 path to D+/D- - DP_CON connected to DP_HOST2 - DM_CON connected to DM_HOST2
0	1	1	AUDIO	Closes audio path to D+/D- only, no microphone switched - DP_CON connected to R_HOST - DM_CON connected to L_HOST
1	0	0	MONO AUDIO with MIC on D+ ⁽²⁾	Closes audio path to DM_CON and microphone on DP_CON pin. This is a mono-audio application. - DP_CON connected to MIC - DM_CON connected to L_HOST
1	0	1	STEREO AUDIO with MIC on VBUS ⁽²⁾	Closes audio path to D+/D- and microphone on VBUS pin. This mode is typically used for stereo headset with microphone. - DP_CON connected to R_HOST - DM_CON connected to L_HOST - VBUS connected to MIC
1	1	0	Undefined	Reserved; do not use.
1	1	1	Charger Detection Reset	Charger Detection Reset. Selecting this mode for greater than 30 μ s resets the FSA801 to check for a charger, the next time a SEL[2:0] state of '000' is applied for more than 30 μ s.

Notes:

1. The SELECT pins are CMOS inputs and should not be left in a floating condition. Some applications require the UART path be in the CLOSED position on power-up for initial programming of the device under test. If that condition is desired, the three SELECT pins should be pulled to the correct levels with external resistors that should exceed 100 K Ω to reduce the static power consumption. In other applications, adding weak pull-down resistors to GND defaults the device to all paths open (low-power mode).
2. When the audio switch is in the OPEN position, the R and L are terminated to GND with internal termination resistors to discharge any stray capacitance that could cause audio pop.

Pin Configuration

Figure 2. 16-Pin, UMLP Pin Assignments (Top-Through View)

Pin Descriptions

Name	Pin #	Description
USB, UART Interface		
DP_HOST1	1	D+ signal, dedicated USB port to be connected to the resident USB or UART transceiver on the phone.
DM_HOST1	2	D- signal, dedicated USB port to be connected to the resident USB or UART transceiver on the phone.
DP_HOST2	3	D+ signal, dedicated USB port to be connected to the resident USB or UART transceiver on the phone.
DM_HOST2	4	D- signal, dedicated USB port to be connected to the resident USB or UART transceiver on the phone.
Audio Interface		
R_HOST	5	Right audio channel from phone audio codec.
L_HOST	6	Left audio channel from phone audio codec.
MIC_HOST	7	Connected to the phone audio codec MIC input pin.
Power Interface		
V _{CC}	16	Input voltage supply pin to be connected to the phone battery output.
Connector Interface		
V _{BUS}	12	Input voltage supply pin to be connected to the V _{BUS} pin of the USB connector.
GND	8	Ground.
DP_CON	11	Connected to the USB connector D+ pin; depending on the FSA801 signaling mode, this pin can share DP_HOST1, DP_HOST2 or R_HOST signals.
DM_CON	10	Connected to the USB connector D- pin; depending on the FSA801 signaling mode, this pin can share DM_HOST1, DM_HOST2 or L_HOST signals.
Charger Detection		
CD_N	9	Active-LOW, open-drain output pin; requires pull-up resistor to baseband I/O voltage supply
Switch Control		
SEL[2:0]	13-15	Switch selection pins; refer to Table 1 for truth table.

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Symbol	Parameter		Min.	Max.	Unit
V_{CC}	Supply Voltage from Battery / Baseband		-0.5	6.0	V
V_{BUS}	Voltage from Mini/Micro-USB Connector		-0.5	28.0	V
V_{SW}	Switch I/O Voltage	USB/UART Path Active	-0.5	$V_{BUS} + 0.5$	V
		Stereo/Mono Audio Path Active	$V_{CC} - 8.5$	$V_{CC} + 0.5$	
		All Other Channels	-0.5	$V_{CC} + 0.5$	
I_{IK}	Input Clamp Diode Current		-50		mA
I_{SW}	Switch I/O Current (Continuous)	USB		50	mA
		Audio		60	
		All Other Channels		50	
I_{SWPEAK}	Peak Switch Current (Pulsed at 1ms Duration, <10% Duty Cycle)	USB		150	mA
		Audio		150	mA
		All Other Channels		150	mA
T_{STG}	Storage Temperature Range		-65	+150	°C
T_J	Maximum Junction Temperature			+150	°C
T_L	Lead Temperature (Soldering, 10 Seconds)			+260	°C
ESD	IEC 61000-4-2 System	USB Connector Pins (D+, D-, V_{BUS})	Air Gap	15	kV
			Contact	8	
	Human Body Model, JEDEC JESD22-A114		All Pins	3	
	Charged Device Model, JEDEC JESD22-C101		All Pins	2	

Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to Absolute Maximum Ratings.

Symbol	Parameter		Min.	Max.	Units
V_{CC}	Battery Supply Voltage		2.7	4.4	V
V_{SW}	Switch I/O Voltage	USB/UART Path Active	0	4.4	V
		Audio Path Active	$V_{CC} - 7.0$	2.0	V
		Mic Path Active	0	$V_{CC} - 1$	V
T_A	Operating Temperature		-40	+85	°C

Switch Path DC Electrical Characteristics

All typical values are at 25°C unless otherwise specified.

Symbol	Parameter	V _{CC} (V)	Conditions	T _A = -40 to +85°C			Unit
				Min.	Typ.	Max.	
Host Interface Pins (SEL[2:0])							
V _{IH}	Input High Voltage	3.2 to 4.4		1.3			V

DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION, OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS. THESE SPECIFICATIONS DO NOT EXPAND THE TERMS OF FAIRCHILD'S WORLDWIDE TERMS AND CONDITIONS, SPECIFICALLY THE WARRANTY THEREIN, WHICH COVERS THESE PRODUCTS.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
2. A critical component in any component of a life support device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.fairchildsemi.com, under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.

PRODUCT STATUS DEFINITIONS

Definition of Terms

Datasheet Identification	Product Status	Definition
Advance Information	Formative / In Design	Datasheet contains the design specifications for product development. Specifications may change in any manner without notice.
Preliminary	First Production	Datasheet contains preliminary data; supplementary data will be published at a later date. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve design.
No Identification Needed	Full Production	Datasheet contains final specifications. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve the design.
Obsolete	Not In Production	Datasheet contains specifications on a product that is discontinued by Fairchild Semiconductor. The datasheet is for reference information only.
