

To all our customers

---

**Regarding the change of names mentioned in the document, such as Mitsubishi Electric and Mitsubishi XX, to Renesas Technology Corp.**

---

The semiconductor operations of Hitachi and Mitsubishi Electric were transferred to Renesas Technology Corporation on April 1st 2003. These operations include microcomputer, logic, analog and discrete devices, and memory chips other than DRAMs (flash memory, SRAMs etc.) Accordingly, although Mitsubishi Electric, Mitsubishi Electric Corporation, Mitsubishi Semiconductors, and other Mitsubishi brand names are mentioned in the document, these names have in fact all been changed to Renesas Technology Corp. Thank you for your understanding. Except for our corporate trademark, logo and corporate statement, no changes whatsoever have been made to the contents of the document, and these changes do not constitute any alteration to the contents of the document itself.

Note : Mitsubishi Electric will continue the business operations of high frequency & optical devices and power devices.

## DESCRIPTION

The M35049-XXXFP is a character pattern display control IC can display on the TV display. It can display 2 pages (24 characters × 12 lines per 1 page) at the same time. It uses a silicon gate CMOS process and it housed in a 20-pin shrink SOP package.

For M35049-001FP that is a standard ROM version of M35049-XXXFP respectively, the character pattern is also mentioned.

## FEATURES

- Screen composition ..... 24 characters × 12 lines × 2 pages
- Number of characters displayed ..... 288 (Max.) × 2 pages
- Character composition ..... 12 × 18 dot matrix
- Characters available ..... page 0 : 256 characters  
page 1 : 256 characters
- Character sizes available ..... 4 (vertical) × 2 (horizontal)
- Display locations available
  - Horizontal direction ..... 472 locations
  - Vertical direction ..... 255 locations
- Blinking ..... Character units
  - Cycle : division of vertical synchronization signal into 32 or 64
  - Duty : 25%, 50%, or 75%
- Data input ..... By the 16-bit serial input function
- Coloring
  - Character color ..... Character unit
  - Background coloring ..... Character unit
  - Border (shadow) coloring ..... 8 colors (RGB output)  
Specified by register
  - Raster coloring ..... 8 colors (RGB output)  
Specified by register
- Blanking
  - Character size blanking
  - Border size blanking
  - Matrix-outline blanking
  - All blanking (all raster area)
- Output ports
  - 4 shared output ports (toggled between RGB output)
  - 4 dedicated output ports
- Display RAM erase function
- Display input frequency range .....  $F_{osc} = 6.3 \text{ MHz to } 16.0 \text{ MHz}$   
(External input clock)
- Horizontal synchronous input frequency  
.....  $H_{sync} = 15.0 \text{ kHz to } 32.0 \text{ kHz}$
- Display oscillation stop function

## APPLICATION

Movie, Digital steel camera

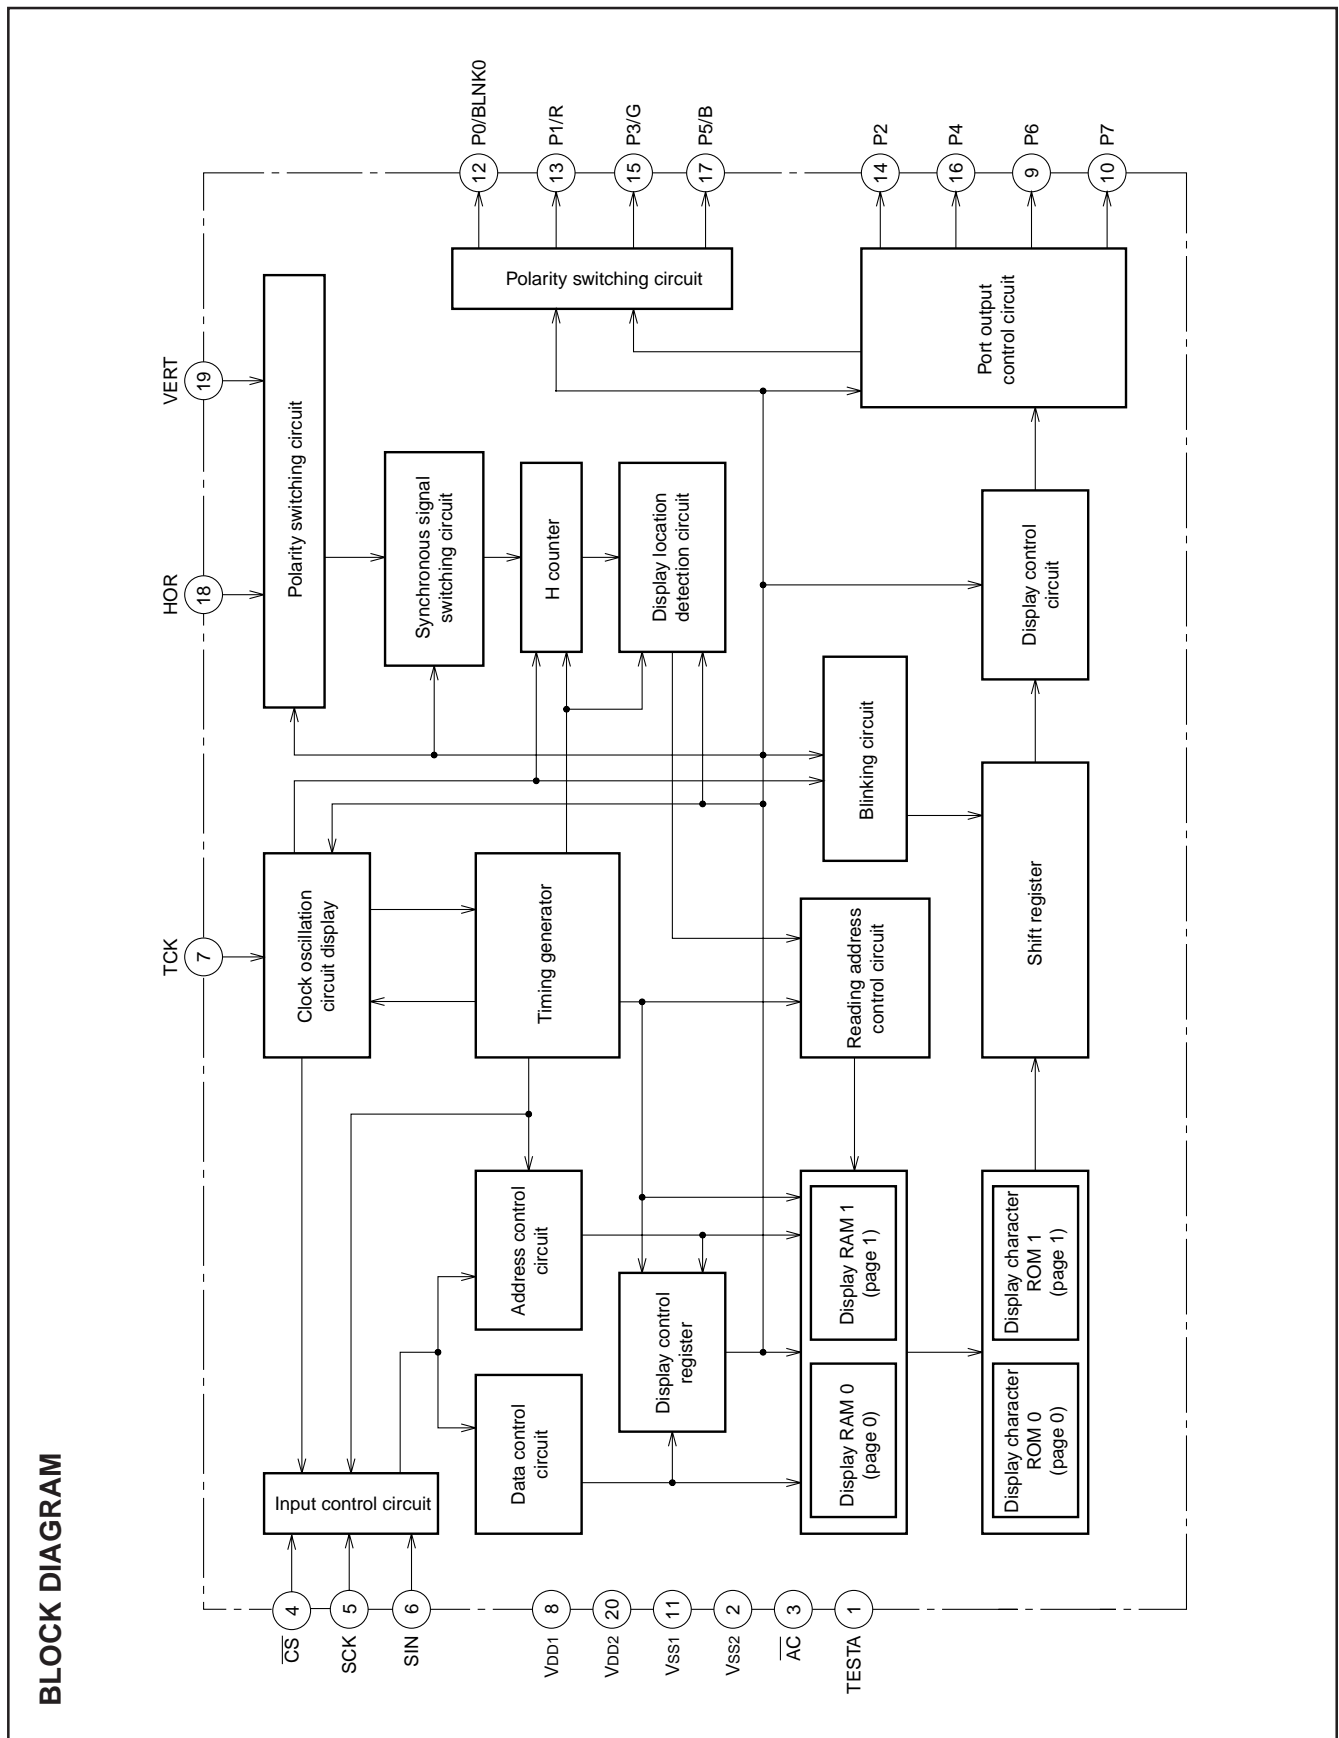

## PIN CONFIGURATION (TOP VIEW)

Outline 20P2Q-A

## PIN DESCRIPTION

| Pin Number | Symbol          | Pin name                            | Input/Output | Function  |
|------------|-----------------|-------------------------------------|--------------|---|
| 1          | TESTA           | TEST pin                            | –            | Test pin. Open this pin.  |
| 2          | VSS2            | Earthing pin                        | –            | Connect to GND.   |
| 3          | $\overline{AC}$ | Auto-clear input                    | Input        | When "L", this pin resets the internal IC circuit. Hysteresis input. Built-in pull-up resistor.                                 |
| 4          | $\overline{CS}$ | Chip select input                   | Input        | Chip select pin. Set this pin to "L" level at serial data transfer. Hysteresis input. Built-in pull-up resistor.                |
| 5          | SCK             | Serial data input                   | Input        | SIN pin serial data is taken in when SCK rises at $\overline{CS}$ pin "L" level. Hysteresis input. Built-in pull-up resistor.   |
| 6          | SIN             | Serial data input                   | Input        | This is the pin for serial input of display control register and display RAM data. Hysteresis input. Built-in pull-up resistor. |
| 7          | TCK             | External clock                      | Input        | This is the pin for external clock input.   |
| 8          | VDD1            | Power pin                           | –            | Please connect to +3V with the power pin.   |
| 9          | P6              | Port P6 output                      | Output       | This is the output port.  |
| 10         | P7              | Port P7 output                      | Output       | This is the output port.  |
| 11         | VSS1            | Earthing pin                        | –            | Please connect to GND using circuit earthing pin.   |
| 12         | P0/BLNK0        | Port P0 output                      | Output       | This pin can be toggled between port pin output and BLNK0 signal output.  |
| 13         | P1/R            | Port P1 output                      | Output       | This pin can be toggled between port pin output and R signal output.  |
| 14         | P2              | Port P2 output                      | Output       | This is the output port.  |
| 15         | P3/G            | Port P3 output                      | Output       | This pin can be toggled between port pin output and G signal output.  |
| 16         | P4              | Port P4 output                      | Output       | This is the output port.  |
| 17         | P5/B            | Port P5 output                      | Output       | This pin can be toggled between port pin output and B signal output.  |
| 18         | HOR             | Horizontal synchronous signal input | Input        | This pin inputs the horizontal synchronous signal. Hysteresis input.  |
| 19         | VERT            | Vertical synchronous signal input   | Input        | This pin inputs the vertical synchronous signal. Hysteresis input.  |
| 20         | VDD2            | Power pin                           | –            | Please connect to + 3V with the power pin.  |

## SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

## MEMORY CONSTITUTION

Address 000<sub>16</sub> to 11F<sub>16</sub> are assigned to the display RAM, address 120<sub>16</sub> to 128<sub>16</sub> are assigned to the display control registers. The internal circuit is reset and all display control registers (address 120<sub>16</sub> to 128<sub>16</sub>) are set to "0" when the  $\overline{AC}$  pin level is "L". And then, RAM is not erased and be undefined. This memory is con-

sisted of 2 pages : page 0 memory and page 1 memory (their addresses are common), page controlled by DAF bit of each address when writing data. For detail, see "DATA INPUT EXAMPLE". Memory constitution is shown in Figure 1 and 2.

| Addresses         | DAF | DAE                 | DAD    | DAC    | DAB      | DAA             | DA9    | DA8    | DA7            | DA6    | DA5    | DA4    | DA3    | DA2    | DA1    | DA0    |

**Fig. 2 Memory constitution (page 1 memory)**

Note: Page 0 and page 1 registers are found in their respective pages. For example, HP8 to HP0 of the page 0 memory sets the horizontal display start position of page 0, whereas HP8 to HP0 (same register name) of the page 1 memory sets the horizontal display start position of page 1. Also, registers common to both page 0 and page 1 are found only in the page 0 memory. For example, PTC0 is the control register of the P0 pin and is found only in the page 0 memory.

## SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

**SCREEN CONSTITUTION**

The screen lines and rows are determined from each address of the display RAM (page 0 and page 1 are common). The screen constitution is shown in Figure 3.

| Row<br>Line | 1                 | 2                 | 3                 | 4                 | 5                 | 6                 | 7                 | 8                 | 9                 | 10                | 11                | 12                | 13                | 14                | 15                | 16                | 17                | 18                | 19                | 20                | 21                | 22                | 23                | 24                |

Notes 1. The display RAM is undefined state at the AC pin.

2. The display RAM consists of 2 pages, page 0 and page 1 (common address). The page in which data is written is controlled by the DAF bit. When set to "0", data is written into page 0, whereas when set to "1", data is written into page 1.

## REGISTERS DESCRIPTION

(1) Address 120<sub>16</sub>

| DA | Register           | Contents |   | Remarks |
|----|--------------------|----------|---|---------|
|    |                    | Status   | Function                                    |         |
| 0  | TEST14<br>(Note 3) | 0        | It should be fixed to "0".                  |         |
|    |                    | 1        | Can not be used.                            |         |
| 1  | TEST15<br>(Note 3) | 0        | It should be fixed to "0".                  |         |
|    |                    | 1        | Can not be used.                            |         |
| 2  | TEST16<br>(Note 3) | 0        | It should be fixed to "0".                  |         |
|    |                    | 1        | Can not be used.                            |         |
| 3  | TEST17<br>(Note 3) | 0        | It should be fixed to "0".                  |         |
|    |                    | 1        | Can not be used.                            |         |

|    |                    | 1        | Can not be used.                            |         |
| 7  | TEST21<br>(Note 3) | 0        | It should be fixed to "0".                  |         |
|    |                    | 1        | Can not be used. It should be fixed to "0". |         |
| 8  | TEST22<br>(Note 3) | 0        | Can not be used.                            |         |
|    |                    | 1        | It should be fixed to "0".                  |         |
| 9  | TEST23<br>(Note 3) | 0        | Can not be used.                            |         |
|    |                    | 1        | It should be fixed to "0".                  |         |
| A  | TEST24<br>(Note 3) | 0        | Can not be used.                            |         |
|    |                    | 1        | It should be fixed to "0".                  |         |
| B  | TEST25<br>(Note 3) | 0        | Can not be used.                            |         |
|    |                    | 1        | It should be fixed to "0".                  |         |
| C  | TEST26<br>(Note 3) | 0        | Can not be used.                            |         |
|    |                    | 1        | It should be fixed to "0".                  |         |
| D  | VJT                | 0        | It is used to "0", normally.                |         |
|    |                    | 1        | Alleviates continuous vertical jitters.     |         |
| E  | TEST27<br>(Note 3) | 0        | Can not be used.                            |         |
|    |                    | 1        | It should be fixed to "0".                  |         |

Notes 1. The mark 0 around the status value means the reset status by the "L" level is input to  $\bar{A}C$  pin.

2. The page in which data is written is controlled by the DAF bit. When set to "0", data is written into page 0, whereas when set to "1", data is written into page 1.

3. Registers marked with (Note 3) are found only in page 0, therefore the register value does not change when the DAF bit is set to "1".

## SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

| A  | PTD4<br>(Note 3)   | ①        | "L" output.   | P4 pin data control.   |
|    |                    | 1        | "H" output.   |                        |
| B  | PTD5<br>(Note 3)   | ①        | "L" output or negative polarity output (B signal output). | P5 pin data control.   |
|    |                    | 1        | "H" output or positive polarity output (B signal output). |                        |
| C  | PTD6<br>(Note 3)   | ①        | "L" output.   | P6 pin data control.   |
|    |                    | 1        | "H" output.   |                        |
| D  | PTD7<br>(Note 3)   | ①        | "L" output.   | P7 pin data control.   |
|    |                    | 1        | "H" output.   |                        |
| E  | TEST28<br>(Note 3) | ①        | Can not be used.  |                        |
|    |                    | 1        | It should be fixed to "0".                                |                        |

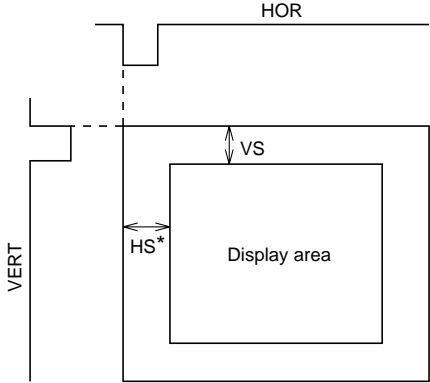

Notes 1. The mark ① around the status value means the reset status by the "L" level is input to  $\overline{AC}$  pin.

2. The page in which data is written is controlled by the DAF bit. When set to "0", data is written into page 0, whereas when set to "1", data is written into page 1.

3. Registers marked with (Note 3) are found only in page 0, therefore the register value does not change when the DAF bit is set to "1".

|

Notes 1. The mark 0 around the status value means the reset status by the "L" level is input to  $\bar{AC}$  pin.

2. The page in which data is written is controlled by the DAF bit. When set to "0", data is written into page 0, whereas when set to "1", data is written into page 1.

3. Registers marked with (Note 3) are found only in page 0, therefore the register value does not change when the DAF bit is set to "1".

| E  | TEST34<br>(Note 3) | 0        | It should be fixed to “0”.   |   |
|    |                    | 1        | Can not be used.   |   |

 Notes 1. The mark ○ around the status value means the reset status by the "L" level is input to  $\bar{AC}$  pin.

2. The page in which data is written is controlled by the DAF bit. When set to "0", data is written into page 0, whereas when set to "1", data is written into page 1.

3. Registers marked with (Note 3) are found only in page 0, therefore the register value does not change when the DAF bit is set to "1".

## SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

Notes 1. The mark ① around the status value means the reset status by the "L" level is input to  $\overline{AC}$  pin.

2. The page in which data is written is controlled by the DAF bit. When set to "0", data is written into page 0, whereas when set to "1", data is written into page 1.

3. Registers marked with (Note 3) are found only in page 0, therefore the register value does not change when the DAF bit is set to "1".

Notes 1. The mark 0 around the status value means the reset status by the "L" level is input to  $\overline{AC}$  pin.

2. The page in which data is written is controlled by the DAF bit. When set to "0", data is written into page 0, whereas when set to "1", data is written into page 1.

3. Registers marked with (Note 3) are found only in page 0, therefore the register value does not change when the DAF bit is set to "1".

Notes 1. The mark ① around the status value means the reset status by the "L" level is input to AC pin.

2. The page in which data is written is controlled by the DAF bit. When set to "0", data is written into page 0, whereas when set to "1", data is written into page 1.

3. Registers marked with (Note 3) are found only in page 0, therefore the register value does not change when the DAF bit is set to "1".

Notes 1. The mark ① around the status value means the reset status by the "L" level is input to AC pin.

2. The page in which data is written is controlled by the DAF bit. When set to "0", data is written into page 0, whereas when set to "1", data is written into page 1.

3. Registers marked with (Note 3) are found only in page 0, therefore the register value does not change when the DAF bit is set to "1".

4. 2 way settings are available by POPUP (address 126<sub>16</sub>).

| 1      |  |                     |   |  |        |               |   |   |                     |   |              |                |   |     |             |   |     |                     |  |     |                          |

Notes 1. The mark ① around the status value means the reset status by the "L" level is input to AC pin.

2. The page in which data is written is controlled by the DAF bit. When set to "0", data is written into page 0, whereas when set to "1", data is written into page 1.

3. Registers marked with (Note 3) are found only in page 0, therefore the register value does not change when the DAF bit is set to "1".

# SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

## DISPLAY FORM 1

M35049-XXXXFP has the following four display forms.

### (1) Blanking mode

Character size

: Blanking same as the character size.

Border size

: Blanking the background as a size from character.

Matrix-outline size

: Blanking the background 12 X18 dot.

All blanking size

: When set register BCOL to "1", all raster area is blanking.

The display mode and blanking mode can be set line-by-line, as follows, from registers BCOL, BLK1, BLK0 (address 128<sub>16</sub>), DSP0 to DSP11 (address 124<sub>16</sub>).

| BCOL | BLK1 | BLK0 | Line of DSPn = "0"                |                         | Line of DSPn = "1"         |                         |
|------|------|------|-----------------------------------|-------------------------|----------------------------|-------------------------|
|      |      |      | Display mode                      | Blanking mode           | Display mode               | Blanking mode           |
| 0    | 0    | 0    | All matrix-outline border display | All matrix-outline size | All matrix-outline display | All matrix-outline size |
|      | 0    | 1    | Character display                 | Character size          | Border display             | Border size             |
|      | 1    | 0    | Border display                    | Border size             | All matrix-outline display | All matrix-outlinesize  |
|      | 1    | 1    | All matrix-outline display        | All matrix-outline size | Character display          | Character size          |
| 1    | 0    | 0    | All matrix-outline border display | All blanking size       | All matrix-outline display | All blanking size       |
|      | 0    | 1    | Character display                 |                         | Border display             |                         |
|      | 1    | 0    | Border display                    |                         | All matrix-outline display |                         |
|      | 1    | 1    | All matrix-outline display        |                         | Character display          |                         |

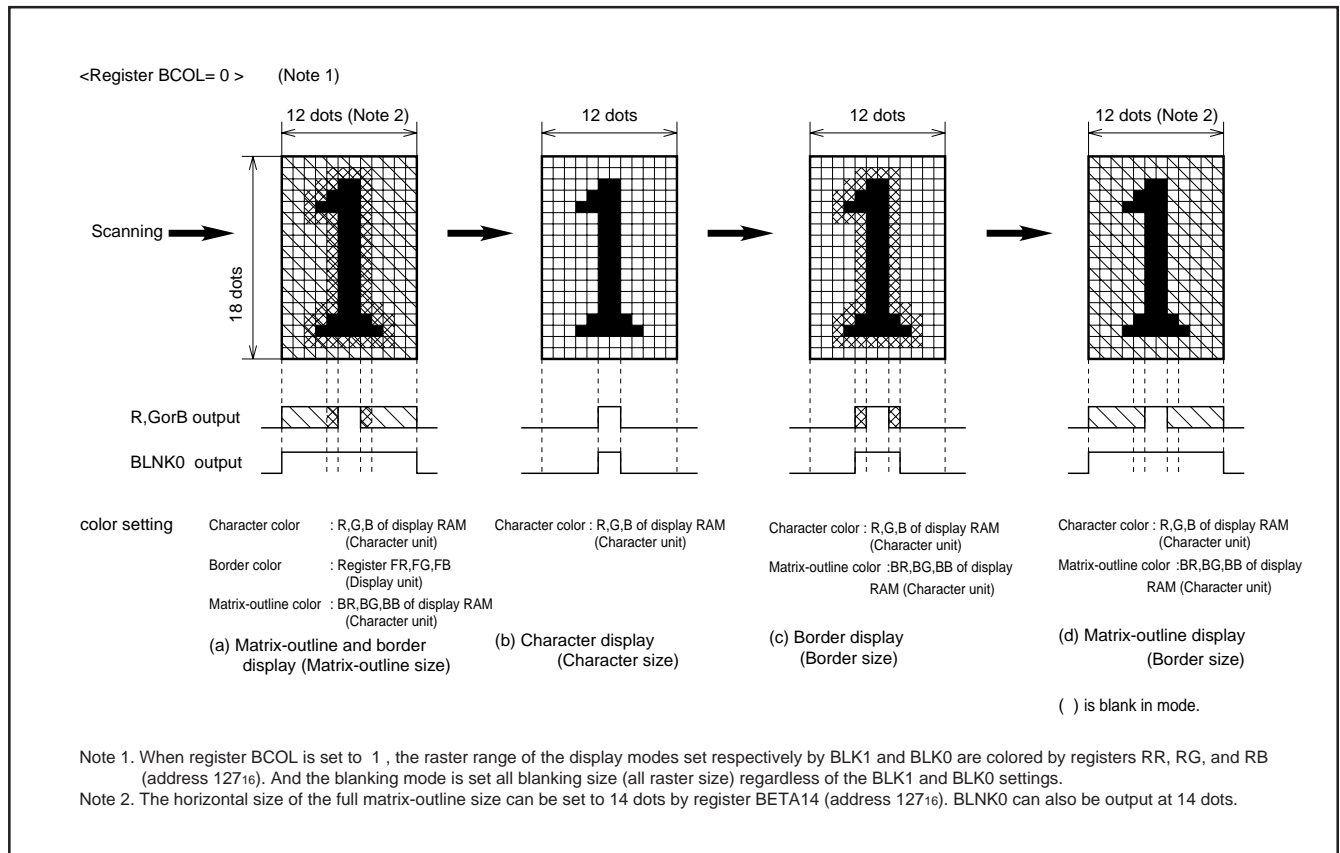

Fig. 4 Display form

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

(2) Shadow display

When border display mode, if set SYAD (address 128<sub>16</sub>) = "0" to "1", it change to shadow display mode.

Border and shadow display are shown below.

Set shadow display color by BR, BG or BB of display RAM or by register FR, FG and FB (address 127<sub>16</sub>).

Fig. 5 Border and shadow display

DISPLAY FORM 2

This IC can display both page 0 and page 1 at the same time.

Page 0: Set the DAF bit in each addresses to "0".

Page 1: Set the DAF bit in each addresses to "1".

Fig.6 Example of 2 pages display

Example 1: Display position, display size, color, etc., can be freely set for each page, and the 2 pages can be displayed on top of each other or side-by-side.

Example 2: When the display range of the 2 pages overlap on the monitor screen, they can be displayed in the 5 below ways using registers MODE0 (address 127<sub>16</sub>), MODE1 (address 128<sub>16</sub>) and POPUP (address 126<sub>16</sub>). (The POPUP register is effective only when MODE0 = "0" and MODE1 = "0".)

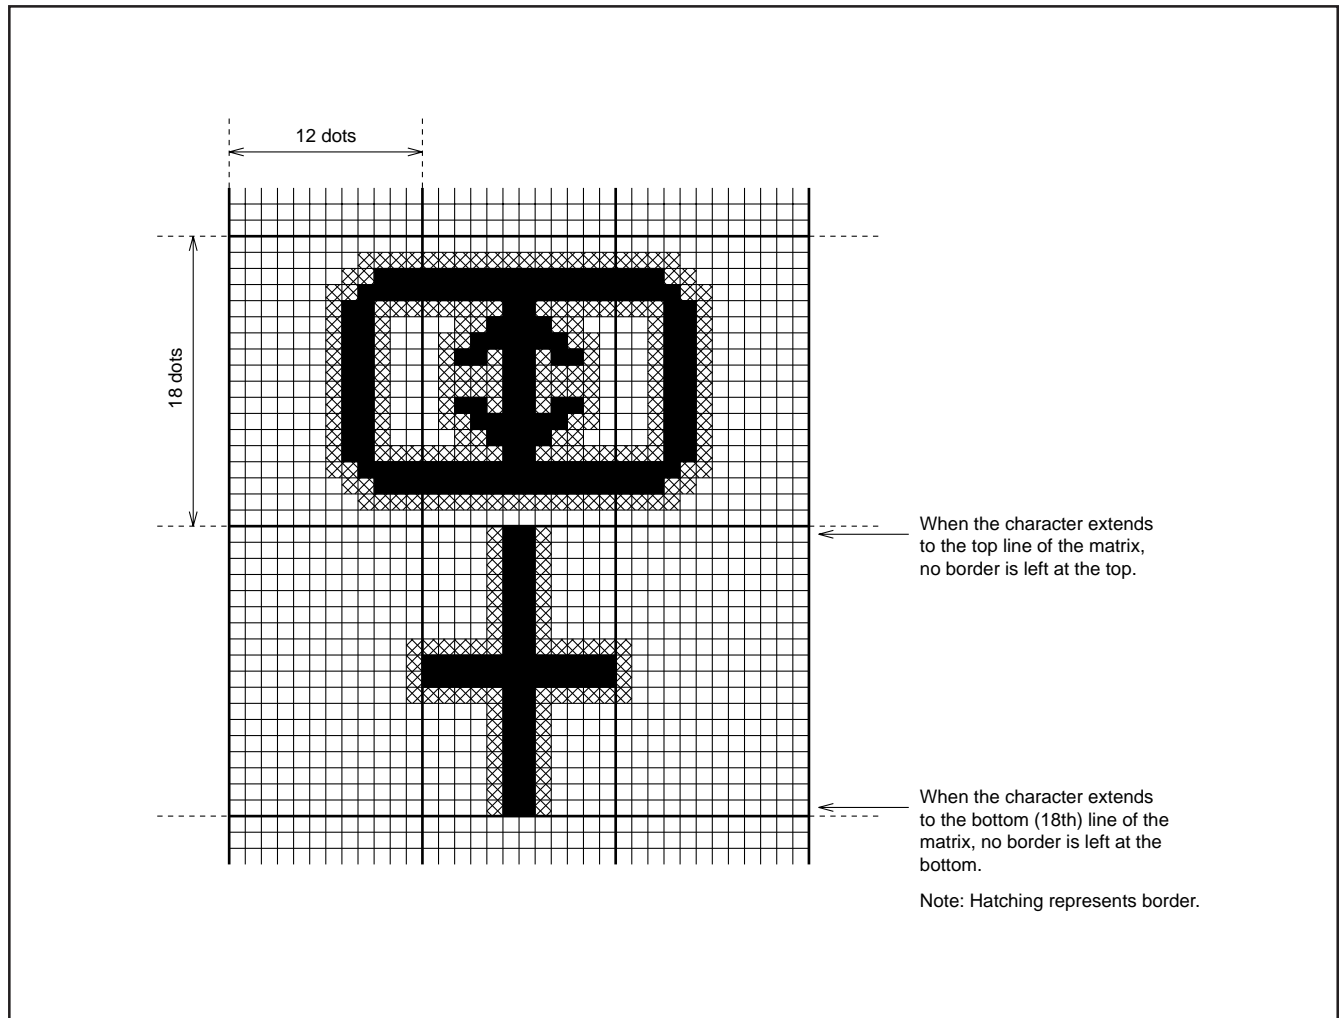

| MODE1 | MODE0 | POPUP | Display mode               |
|-------|-------|-------|----------------------------|
| 0     | 0     | 0     | Standard (Page 1 priority) |
|       |       | 1     | Standard (Page 0 priority) |
| 0     | 1     | —     | AND                        |
| 1     | 0     | —     | EXOR                       |
| 1     | 1     | —     | OR                         |

- (1) Standard (page 1 priority) ... Page 1 has priority in overlapping areas. Page 0 is not displayed in those areas.
- (2) Standard (page 0 priority) ... Page 0 has priority in overlapping areas. Page 1 is not displayed in those areas.
- (3) AND ..... In overlapping areas, the RGB output of the 2 pages is AND processed and output.
- (4) EXOR ..... In overlapping areas, the RGB output of the 2 pages is EXOR processed and output.
- (5) OR ..... In overlapping areas, the RGB output of the 2 pages is OR processed and output.

## CHARACTER FONT

Images are composed on a 12 X 18 dot matrix, and characters can be linked vertically and horizontally with other characters to allow the display the continuous symbols.

Character code FF16 is fixed as a blank without background. Therefore, cannot register a character font in this code.

**Fig.7 Example of border display**

## SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

**DATA INPUT EXAMPLE**

Data of display RAM and display control registers can be set by the 16-bit serial input function. Example of data setting is shown in Figure 8.

**Data input example (M35049-XXXFP)**

Notes 1 : The page in which data is written is controlled by the address. To write data into page 0, set "0". To write data into page 1, set "1".

2 : Matrix-outline display in this data.

3 : Input a continuous clock of constant period from the TCK pin.

Fig 8. Example of data setting

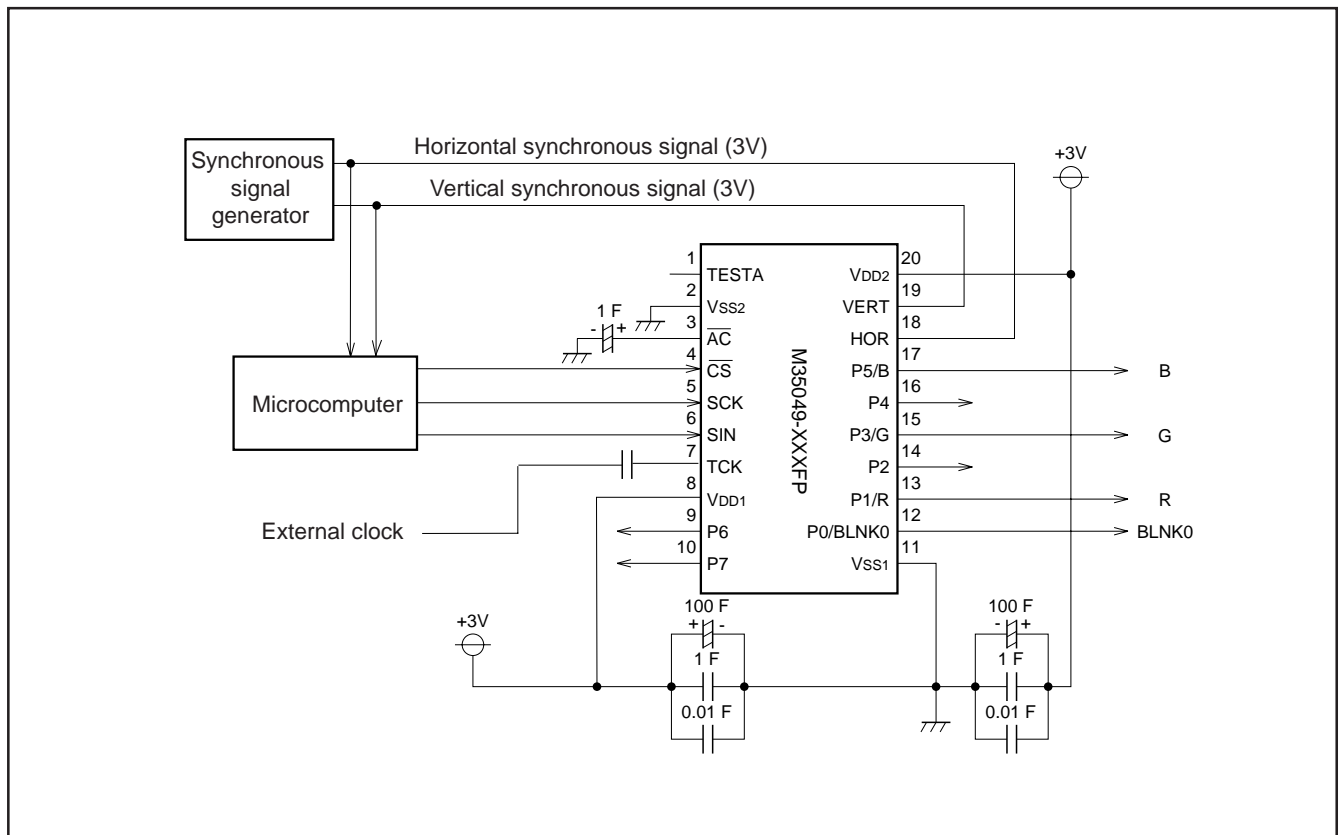

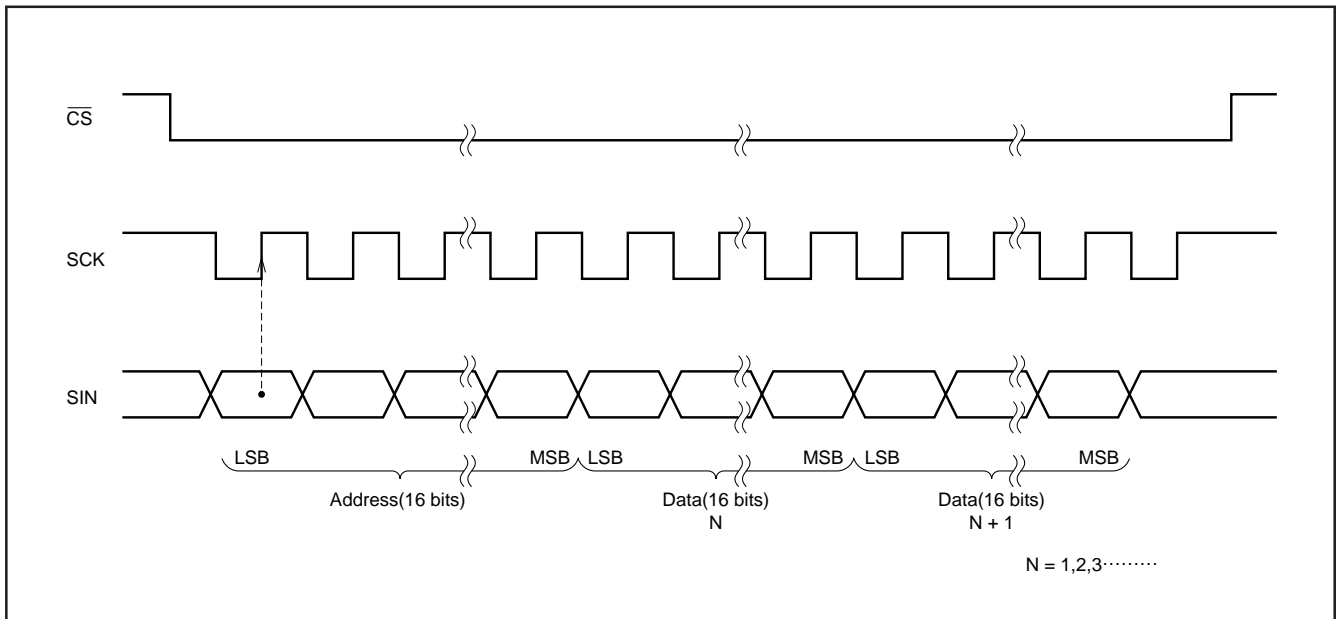

Fig. 9 Example of the M35049-XXXXFP peripheral circuit

### SERIAL DATA INPUT TIMING

- (1) Serial data should be input with the LSB first.
- (2) The address consists of 16 bits.
- (3) The data consists of 16 bits.
- (4) The 16 bits in the SCK after the  $\overline{CS}$  signal has fallen are the address, and for succeeding input data, the address is incremented every 16 bits. Therefore, it is not necessary to input the address from the second data.

**Fig.10** Serial input timing

**TIMING REQUIREMENTS** ( $T_a = -20^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ ,  $V_{DD} = 2.2$  to  $3.5\text{V}$ , unless otherwise noted)

Notes 1. The current from the IC must not exceed −0.1 mA/port at any of the port pins (P0 to P7).

2. The current flowing into the IC must not exceed 0.1 mA/port at any of port pins (P0 to P7).

## NOTE FOR SUPPLYING POWER

### (1)Timing of power supplying to AC pin

The internal circuit of M35049-XXXXFP is reset when the level of the auto clear input pin  $\overline{AC}$  is "L". This pin is hysteresis input with the pull-up resistor.

The timing about power supplying of  $\overline{AC}$  pin is shown in Figure 12.

After supplying the power ( $V_{DD}$  and  $V_{SS}$ ) to M35049-XXXXFP and the supply voltage becomes more than  $0.8 \times V_{DD}$ , it needs to keep  $V_{IL}$  time;  $t_w$  of the  $\overline{AC}$  pin for more than 1ms.

Start inputting from microcomputer after  $\overline{AC}$  pin supply voltage becomes more than  $0.8 \times V_{DD}$  and keeping 200ms wait time.

### (2)Timing of power supplying to $V_{DD1}$ and $V_{DD2}$ .

Supply power to  $V_{DD1}$  and  $V_{DD2}$  at the same time.

Fig. 12 Timing of power supplying to  $\overline{AC}$  pin

## PRECAUTION FOR USE

### Notes on noise and latch-up

In order to avoid noise and latch-up, connect a bypass capacitor ( $\approx 0.1\mu F$ ) directly between the  $V_{DD1}$  pin and  $V_{SS1}$  pin, and the  $V_{DD2}$  pin and  $V_{SS2}$  pin using a heavy wire.

### Note for horizontal synchronous signal input to the HOR pin

Set horizontal synchronous signal\* waveform timing to under 5ns and input to HOR pin.

Set only the side which set by B/F register waveform timing under 5ns and input to HOR pin.

\*: Set front porch edge or back porch edge by B/F register (address 12816).

### Note for external clock input to the TCK pin

Input to the TCK pin a constant-period continuous external clock that synchronizes with the horizontal synchronous signal. Never stop inputting the clock while displaying.

## DATA REQUIRED FOR MASK ROM ORDERING

Please send the following data for mask orders.

- (1) M35049-XXXXFP mask ROM order confirmation form
- (2) 20P2Q-A mask specification from
- (3) ROM data : EPROMs or floppy disks

\*In the case of EPROMs, three sets of EPROMs are required per pattern.

\*In the case of floppy disks, 3.5-inch 2HD disk (IBM format) is required per pattern.

**STANDARD ROM TYPE : M35049-001FP**

M35049-001FP is a standard ROM type of M35049-XXXFP.  
 The character patterns for 0 page are fixed to the contents of Figure 13 to 16, the character patterns for page 1 are fixed to the contents of Figure 17 to 20.

## Keep safety first in your circuit designs!

- Mitsubishi Electric Corporation puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage. Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of non-flammable material or (iii) prevention against any malfunction or mishap.

## Notes regarding these materials

- These materials are intended as a reference to assist our customers in the selection of the Mitsubishi semiconductor product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Mitsubishi Electric Corporation or a third party.
- Mitsubishi Electric Corporation assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.
- All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Mitsubishi Electric Corporation without notice due to product improvements or other reasons. It is therefore recommended that customers contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for the latest product information before purchasing a product listed herein.
- The information described here may contain technical inaccuracies or typographical errors. Mitsubishi Electric Corporation assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors. Please also pay attention to information published by Mitsubishi Electric Corporation by various means, including the Mitsubishi Semiconductor home page (<http://www.mitsubishichips.com>).
- When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Mitsubishi Electric Corporation assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.
- Mitsubishi Electric Corporation semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.
- The prior written approval of Mitsubishi Electric Corporation is necessary to reprint or reproduce in whole or in part these materials.
- If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.
- Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.
- Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for further details on these materials or the products contained therein.
