General Information

Product Nomenclature

LUXEON M emitters are specified and binned "hot" under conditions comparable to those found in "real-world" lighting products.

The part number designation is explained as follows:

L X R a - b c d e - f g h j

Where:

a — designates minimum CRI (7 = 70, 8 = 80, 9 = 90, 0 = Royal Blue)

b — is S for serially connected product with voltage less than 12V; R for series-parallel connected product with voltage less than 6V; Q for parallel connected product with voltage less than 3V.

c — designates color designation (W = White, R = Royal Blue)

d, e — designates CCT (27 = 2700K, 30 = 3000K, 35 = 3500K, 40 = 4000K, 50 = 5000K, 57 = 5700K, 65 = 6500K, 00 = Royal Blue)

fghj — minimum flux lumen (optional)

The test conditions for 12V LUXEON M LXRa-Scde-fghj are 700 mA DC with junction temperature 85°C. The test condition for 6V LUXEON M LXRa-Rcde-fghj are 1400 mA DC with junction temperature 85°C. The test conditions for 3V LUXEON M LXRa-Qcde-fghj are 2800 mA DC with junction temperature 85°C.

Therefore LUXEON M 12V products tested and binned at 700 mA follow the part numbering scheme:

Average Lumen Maintenance Characteristics

Lumen maintenance for solid-state lighting devices (LEDs) is typically defined in terms of the percentage of initial light output remaining after a specified period of time. Philips Lumileds projects that LUXEON M products will deliver, on average, 70% lumen maintenance (L70) at 50,000 hours of operation at a forward current of up to 700 mA for LXRx-Sxxx and 1400 mA for LXRx-Rxxx and 2800 mA for LXRx-Qxxxx. This projection is based on constant current operation with junction temperature maintained at or below 135°C. This performance is based on Philips Lumileds historical data from tests run on similar material systems, and internal LM80 and reliability testing. Observation of design limits included in this data sheet is required in order to achieve this projected lumen maintenance.

Environmental Compliance

Philips Lumileds is committed to providing environmentally friendly products to the solid-state lighting market. LUXEON M is compliant to the European Union directives on the restriction of hazardous substances in electronic equipment, namely the RoHS directive. Philips Lumileds will not intentionally add the following restricted materials to the LUXEON M lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE).

Product Binning and Labeling

Purpose of Product Binning

In the manufacturing of semiconductor products, there is a variation of performance around the average values given in the technical data sheets. For this reason, Philips Lumileds bins the LED components for luminous flux, color, and forward voltage (V_f).

Decoding Product Bin Labeling

Reels with LUXEON M White emitters are labeled with a four digit alphanumeric code (CAT code) following the format below. All emitters packaged within a reel are of the same 4-variable bin combination.

For LXRx-xWxx, Reels of emitters are labeled with a four digit alphanumeric CAT code following the format below.

ABCD

A = Luminous flux bin (See table 9)

B = Color or CCT indication (1 for 6500K, 2 for 5700K, 3 for 5000K, 5 for 4000K, 6 for 3500K, 7 for 3000K, and 8 for 2700K)

C = Color consistency (5 for within 5 SDCM ellipse, 3 for within 3SCDM ellipse). Detailed definitions for these color bins can be found in Table 11.

D = V_f bin (F,G,H)

Reels with LUXEON M Royal Blue emitters are labeled with a three digit alphanumeric CAT code following the format below. All emitters packaged within a reel are of the same 4-variable bin combination.

ABC

A = Radiometric Power Bin (See table 10)

B = Peak wavelength bin (See table 12)

C = V_f bin (F,G,H)

Luminous Flux Bins

Table 13 lists the standard photometric luminous flux bins for LUXEON M white emitters (LXRx-xWxx). Test conditions for LXRx-SWxx are 700 mA and junction temperature 85°C. Test conditions for LXRx-RWxx are 1400 mA and junction temperature 85°C.

Although several bins are outlined, product availability in a particular bin varies by production run and by product performance.
