STAR-LINE® Series

Star-Line Series "ZP/ZR" connectors are heavy duty environmentally sealed plugs and receptacles and have been successfully used in all types of Industrial and Aerospace applications. These compact environmental connectors have provided outstanding performance in complex ground support cable networks, automatic and process control systems and instrumentation systems.

This family of connectors has made a major contribution to the successful interconnection of peak power generating systems as well as offshore petroleum production for power distribution and data acquisition.

Ample margins of safety and reliability have been designed into the Star-Line connectors to maintain capability levels which make them ideally suited for the broad spectrum of demands placed on them by industry.

The specific materials and design features incorporated in Star-Line connectors were originally selected to satisfy the stringent requirements of the Aerospace industry for heavy-duty connectors. These connectors combine electrical and mechanical capabilities that equal or exceed the performance parameters established by the Military Specification MIL-5015.

- UL & CSA listed to new 1682 requirements
- ENVIRONMENTAL RESISTANCE Design and materials withstand the most challenging operating conditions.
 Series has an IP 67 rating.
- SOLDER, CRIMP AND PRESSURE TERMINALS AVAILABLE
- EASILY ACCESSIBLE WIRE TERMINALS Conductors are readily terminated to contacts. Cable housings are slipped over conductors or leads after terminating. Cumbersome handling and seating of inserts with conductors attached is eliminated.
- LARGE WIRING SPACE Ample wiring space is provided in cable housings and conduit fitting bodies. Hub of body mounts in any of four positions (except FS & FD box assemblies).
- **REVERSIBLE INSERTS** A full range of contact inserts and application adapters are available. All are interchangeable and reversible to suit special needs.

* Star-line Series Connectors are certified to UL 1682 specifications.

- DOUBLE-LEAD THREAD COUPLING Modified Acme Thread does not clog under adverse conditions of ice, snow, sand or mud and provides the quick coupling feature.
- HARD ANODIC COATING All machine, aluminum parts finished with a hard, scratch-resistant coating per MIL-A-8625, Type III. Dielectric strength 1800 volts. Heat resistance of 750° F.
- HIGH TENSILE STRENGTH *ALUMINUM Bar Stock Components precision machined. Points of impact designed for extra strength.
- RADSOK® HIGH AMPERAGE CONTACTS –
 Special arrangements are available with RADSOK
 high amperage contacts. Standard Star-line inserts
 are not interchangeable with new RADSOK contact
 insert arrangements.
- RoHS COMPLIANT PRODUCT AVAILABLE – Consult Amphenol Industrial Operations.

STAR-LINE® EX Series

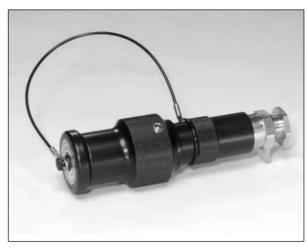

The Star-Line EX Series is a hybrid form of the parent Starline product line. The series is certified for use in a Zone 1-IIc hazardous environment. Classified facilities such as petrochemical refineries, land and offshore drilling systems are but a few of the applications for this broad product series.

- ATEX CERTIFIED for Zone 1-IIc hazardous environment. Certificate number 03ATEX1101X.
- **CENELEC IP68-8 RATED -**Listed under EEx d IIc T6. Plugs and receptacles listed under EEx de IIc T6.
- HARD ANODIC COATING All machined aluminum parts finished with a hard, scratch-resistant coating per MIL-A-8625, Type III. Dielectric strength 1800 volts. Heat resistance of 750° F.
- SOLDER, CRIMP AND PRESSURE TERMINALS **AVAILABLE**
- **REVERSIBLE INSERTS** A full range of contact inserts for power, signal and mixed applications are available. All are interchangeable and reversible to suit specific needs.
- **EASILY ACCESSIBLE WIRE TERMINALS Conductors** are readily terminated to contacts. Cable housings are slipped over conductors or leads after terminating. Cumbersome handling and seating of inserts with conductors attached is eliminated.
- LARGE WIRING SPACE Ample wiring space is provided in cable housings and hardware.
- **HIGH TENSILE STRENGTH ALUMINUM** Bar Stock Components precision machined. Points of impact designed for extra strength.
- **CABLE OPTIONS** Starline EX Series can be terminated onto unarmored or armored and sheathed cables built to IEEE-45 / UL1309, IEC, BS, DIN and JIC standards. Flexible cables like SOOW-A, W, G-GC and DLO constructions can also be used with this Series.
- **EX CABLE GLANDS** Wide variety of glands are available for Star-Line EX connectors. For more information ask for new Amphenol Cable Glands and Cord Grips catalog 12-055.
- **INSERT VARIETY** A broad range of inserts are offered ranging from single-contact to 143 contacts. High amperage up to 1135 amps at 1000V / AC or DC. Contacts are high quality copper with silver plating. (Gold plating available as an option) Composite inserts for power, control and instrumentation service available.
- RADSOK® HIGH AMPERAGE CONTACTS Special arrangements are available with RADSOK high amperage contacts. Standard Star-line EX inserts are not interchangeable with new RADSOK contact insert arrangements.
- **RoHS COMPLIANT PRODUCT AVAILABLE** - Consult **Amphenol Industrial Operations**

Star-Line EX Series connectors are certified for use in Zone 1-IIc hazardous environmentt

Star-Line EX Connector with EX gland (EX-13-3 style shown)

STAR-LOK™ Series

The Star-Lok's unique swiftmate spring-loaded **reverse** bayonet coupling mechanism, creates a positive metal to metal lock-up between the plug and receptacle, with a simple push of the plug to mate and a simple eighth turn and pull to unmate.

- UL & CSA listed to new 1682 requirements
- ENVIRONMENTAL RESISTANCE Design and materials withstand the most challenging operating conditions. Series has an IP 67 rating.
- HARD ANODIC COATING All machine, aluminum parts finished with a hard, scratch-resistant coating per MIL-A-8625, Type III. Dielectric strength 1800 volts. Heat resistance of 750° F.
- SOLDER, CRIMP AND PRESSURE TERMINALS AVAILABLE
- REVERSIBLE INSERTS A full range of contact inserts for power, signal and mixed applications are available. All are interchangeable and reversible to suit specific needs.
- EASILY ACCESSIBLE WIRE TERMINALS –
 Conductors are readily terminated to contacts.
 Cable housings are slipped over conductors or leads after terminating. Cumbersome handling and seating of inserts with conductors attached is eliminated.

* Star-Lok Series Connectors are certified to UL 1682 specifications.

- LARGE WIRING SPACE Ample wiring space is provided in cable housings and hardware.
- HIGH TENSILE STRENGTH ALUMINUM Bar Stock Components precision machined. Points of impact designed for extra strength.
- RADSOK® HIGH AMPERAGE CONTACTS Special arrangements are available with RADSOK high amperage contacts. Standard Star-Lok inserts are not interchangeable with new RADSOK contact insert arrangements.

Star-Lok's new innovative design features a patented coupling mechanism – a one-handed swift engagement provides a positive connection and consistent mating.

Star-Lok's coupling mechanism also eliminates the problems associated with threaded coupling (dirt, thread damage, many turns to fully mate, etc.), ensuring positive mating every time. The mechanism requires only a slight turn and pull to unmate and is engineered to resist vibration.

Star-Lok's resistance to axial wear offers true metal-to-metal bottoming of mated components. Star-Lok is developed from the proven Pyle Star-Line connector platform and offers: a large family of inserts, contacts and hardware options and an array of signal, power and mixed arrangement designs.

RoHS COMPLIANT PRODUCT AVAILABLE – Consult

Amphenol Industrial Operations.

Environmental Highlights

PROPERTY	MIL-5015 REQUIREMENTS CLASSES A, B, E J & R	STAR-LINE, STAR-LOK CONNECTORS
TEMPERATURE	-67° F to 225° F	Temperature Classes A, B, E, J and R can withstand 257° F continuously. For short duration high-temperature life, consult factory.
PRESSURE	No requirement	300 PSI external (coupled connectors) 200 PSI internal (with pin and socket inserts)
AIR LEAKAGE	1 cubic inch/ hour maximum	Exceeds Classes E and R specifications
HUMIDITY AND MOISTURE RESISTANCE	1 1/2 times A.C. voltage rating after 14 days. Exposure to 95% relative humidity at 160° F.	Exceeds Classes E and R. MIL-5015 Meets MIL-STD-202B, Method 106A
CORROSION RESISTANCE	48 Hours – Method 1001 MIL-STD-1344 No exposure of base metal.	Salt spray: 300 days – No exposure of base metal.
CHEMICAL RESISTANCE	No requirement	Oil, most acids and alkalis.
DUST RESISTANCE	No requirement	Meets MIL-STD-202B, Method 110, Condition B
SHOCK RESISTANCE	50 G minimum	Exceeds 60 G's Certain inserts available to 200 G.
VIBRATION	Method 2006 Method II MIL-STD-1344	Exceeds Method II & MIL-STD-167-1 (Ships).
TEST PROBE ABUSE	Contact size No. 16 and No. 18	Exceeds MIL-5015 on all contacts No. 18 through 4/0.

Why the Double-Lead Acme Thread?

The double-lead Acme thread is a moderate torque quick-coupling thread which permits complete coupling in approximately one turn of the coupling nut. In addition, there are actually two parallel threads having starting points 180 degrees apart. All of this ensures that plugs and receptacles are being mated or unmated axially. The thread contour makes it self-cleaning.

One parallel thread removed to show actual thread angle.

Standard double-lead Acme. Two parallel threads.

Wire Limitation Guide

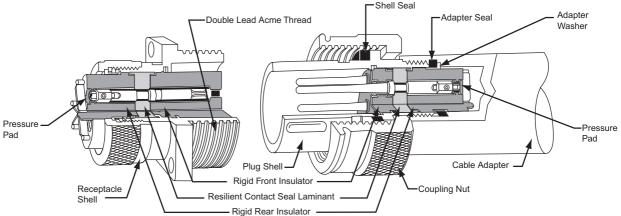

There are restrictions to the maximum diameter of wire as they relate to the rear or wire side of the connector insert as follows.

Mod I. When wires are passed through the rigid back insulation for ease of soldering:

	Wire size	Maximum diameter
	#4/0	.747"
	#2/0	.555"
	#4	.400"
	#8	.262"
	#10	.201"
	#12	.150"
	#16	.107"
	#18	.086"
Mod II &	III	
	#10	.248"
	#12	.193"
	#16	.130"
	#18	.110"

INDUSTRIAL

MOD Captive Contact Inserts

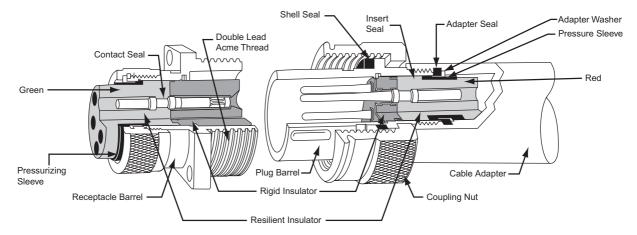

Self-sealing Construction: all MOD I captive contact inserts are capable of being terminated after assembly in the basic barrel and are completely self-sealing when pressurized by any selected adapter. Water, gas, vapor, moisture or dust positively cannot pass in either direction through or around the insulation.

The "sandwich" construction of MOD I inserts consists of a resilient silicone laminate between two rigid plastic insulators. The resilient laminate seals absorbs shock and vibration and allows the contacts to align themselves freely. The rigid faced plastic insulators impart just the right amount of restraint to retain the contacts in place.

The combined "sandwich" provides all the advantages of resilient mounting plus all the advantages of rigid mounting, with none of the shortcomings of either. Under pressure, between a shoulder and a thrust washer, the silicone reacts as a fluid and being non-compressible, flows against all surfaces to affect a reliable seal around the periphery of the insert and around all contacts where they penetrate the insulation.

Contact cavities are clearly numbered on the front and rear insert face to facilitate identification during assembly, inspection and maintenance. Socket insulator contact cavities are of a bellmouth guided entry design. These chamfered lead-ins insure easy and positive mating of male contacts.

MOD II Insertable/Removable Crimp Contact Inserts

MOD II insulations have one less rigid disc than their MOD I counterparts.

Individual unmounted contacts are crimped to their respective wires outside of the connector where ample working space is available. The crimping operation can be by hand or power operated tool.

Contacts with crimped joint intact are inserted one by one, with a hand tool, into the insulation premounted within the connector barrel shell.

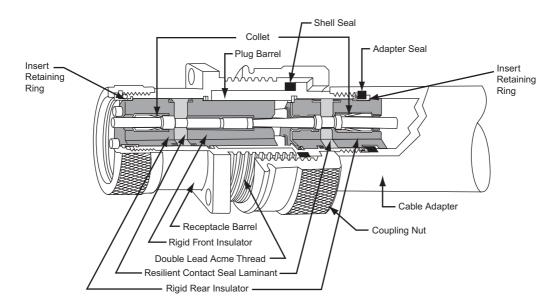

The resilient portion of the insert functions to seal around the contacts and prevent leakage through contact cavities, seal

against leakage between the insert and shell, absorb shock and vibration, provide electrical insulation between contacts and retain the contacts in the connector.

Contacts may be inserted and removed without degradation of the retention or environmental capability. The front rigid portion of the insert functions to stabilize and ensure positive alignment of the contacts.

Contact cavities are clearly numbered on the front and rear insert face to facilitate identification during assembling, inspection and maintenance. Socket insulator contact cavities are of a bellmouth guided entry design. These chamfered lead-ins ensure easy and positive mating of male contacts.

MOD III Insertable/Removeable Crimp Collet Retained Contact

Three element contact inserts are factory installed and locked into position with a non-removable retaining ring. This "sandwich" assembled insert, for rear-insertable and released contacts consist of a resilient laminant seal interposed between two rigid plastic insulators. This proven design concept eliminates the potential failure possibilities normally found in all resilient or all rigid inserts by combining all the advantages of both the resilient and rigid mounting systems.

The resilient laminant insulator absorbs shock or vibration and allows contacts to adjust themselves freely. The resilient insulator affects a full and reliable seal around each contact when compressed by seating of the accessory hardware. In addition, the laminant also provides a seal between the connector insert and the internal bore of the plug or receptacle shell.

The rigid rear insulator supports and locks the beryllium copper collets. The rigid front insulator positions the forward contact-locating shoulder and the collet tines lock the rear shoulder of the contacts. The contacts are positively restrained against forward and rear movement. The main advantages of collet retention are lower insertion forces, eliminating need for insertion tools, and higher retention forces. Collet locking tines permit the contacts to be released and removed from the rear of the insert for quick and easy circuit changes.

Contact cavities are clearly numbered on the front and rear insert face to facilitate identification during assembly, inspection and maintenance. Socket insulator contact cavities are of a bellmouth guided entry design. These chamfered lead-ins ensure easy and positive mating of male contacts.

Summary

The foregoing is a brief explanation of the three basic insert designs offered within this catalog. It offers different and distinct advantages for the cable terminator, electrician and production worker.

When the connector is in use, as a functional device the insert MOD design has no effect on the intermateability of the connector. When a configuration you have selected gives you a choice of MOD design, ask yourself the following questions:

- 1. Do you have a large quantity of connectors to apply? If you do, then the crimp removable series would be appropriate with its inherent timesaving advantages during terminations.
- 2. Are circuits likely to be changed often, i.e., would the connector function as a "patching device?" Here, too, the crimp versions with easily removed and installed contacts are advantageous.

If a contact configuration is desired but is not shown, consult the factory. Insert arrangements are constantly being added to the line.

Custom Build Your Own Connectors

Power Connectors – 20-30-60-100-200-325-700 Amperes, 1 thru 10 Contacts Control & Instrumentation Connectors – 3 thru 143 Contacts

The following pages present connector sub-assemblies which are available and can be used in conjunction with the inserts listed.

PLUG CONFIGURATION

RECEPTACLE CONFIGURATION

SOCKET INSERT CONFIGURATION

Ordering Information

All plug and receptacle assemblies require two part numbers:

- A. The catalog number of the desired insert.
- B. The catalog number of the selected plug or receptacle hardware.

To Order Complete Assemblies

- 1. Determine supply voltage, amperage and number of contacts desired.
- 2. Select insert configuration from pages 37-63. Write down Dash Number, Shell Size and MOD number of insert. Voltage and amperage information can be found on page 30. Example: 3#12 contacts 27P (MALE) and 27S (FEMALE); MOD I; Shell Size 12 (page 37).
- 3. Select desired plug and receptacle hardware from pages 9-28. Make certain that the shell size of the hardware corresponds with the shell size of the desired insert. Determine outside diameter of cable. Example: Male Plug with Basket Weave. Cable is 3 conductor #12 (.635 outside diameter). ZPLK-1212-27P (page 15).
 - Female Receptacle mounted to Junction Box with 45° Angle Adapter and 1" Conduit Hub. ZRLBB-312-27S (page 23).
- 4. Order tools from pages 76-77.

To Order Assemblies Without The Insert

(For large users stocking connector components in bulk)

- If a MOD I insert will be used, order the hardware by the catalog number and eliminate the asterisk. Example: ZPLD-1212 (page 12).
- 2. If a MOD II insert will be used, order by the catalog number but substitute a 200 for the asterisk. Example: ZPLD-1212-200
- 3. MOD III inserts must be ordered assembled in their basic barrel (consult Amphenol Industrial Operations).

Please Read Carefully:

- Hardware with a longer cable housing should be used if the insert has:
 - A. Any pressure contact line or ground.
 - B. More than 10 contacts-any size.
 - C. More than 4 #10 or larger contacts.
- 2. A jack coupling nut should be used if the insert has:
 - A. A configuration with shorter relay contacts.
 - B. A configuration of 37 or more contacts.

A JACK COUPLING NUT SHOULD NOT BE USED ON ANY POWER INSERT CONNECTOR THAT IS TO BE DISCONNECTED UNDER LOAD

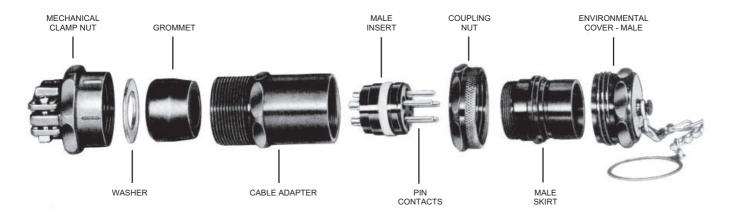

To insure proper coupling the following torque values should be used on the coupling nut:

Shell Size	Torque Setting (lb. ft.)
12	11,0
16	13.5
20	15.5
C20	15.5
24	23.0
C24	23.0
28	31.0
C28	31.0

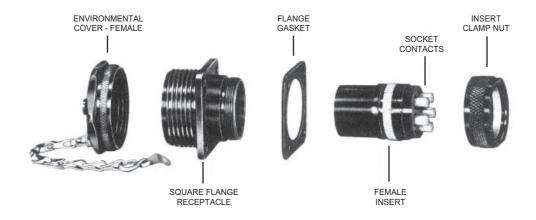

NOTE: The N.E.C. circuit breaking and non-circuit breaking ratings are based on test results of contacts and connectors. Consult the N.E.C. when selecting wire/cable for specific applications. Under certain conditions, a wire size may be rated higher or lower than our table indicates for a given contact size.

Straight Plug

With Conduit Adapter (for flexible conduit fittings)

To specify a complete plug, substitute the dash no. of the contact insert selected for the asterisk (*) In the catalog no. below. NOTE: The jack nut should not be used with current rupture insert configurations.

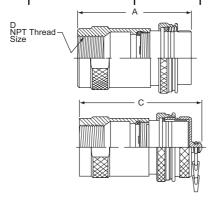

A PLUG WITH JACK COUPLING NUT SHOULD BE USED WITH INSERTS HAVING 37 OR MORE CONTACTS.

For Star-Line series add a "Z" to the beginning of catalog no. (Ex. ZPLT). For Star-Lok series add an "S" to the beginning of catalog no. (Ex. SPLT).

Types
_PLT _PET

Amphenol

INDUSTRIAL

In-Line Receptacle

With Conduit Adapter

(for flexible conduit fittings)

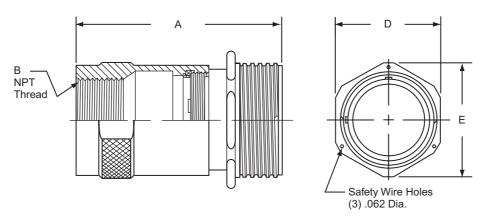

To specify a complete receptacle, substitute the dash no. of the contact insert selected, for the asterisk (*) in the catalog no. below.

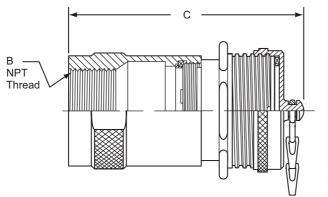

To specify receptacle with threaded environmental cover, change third letter in part no. "L" to "E"".

Types ZRLT ZRET

Shell	Size		Dimensions								
Size	Conduit	Cat. No.	Α	В	С	D	Е				
12	3/4	ZRLT-2 12-*	4-1/4	3/4	4-7/8	1-3/8	1-61/64

Insert Configuration Listing

For Amphenol®/ Pyle® Star-Line, Star-Lok and Star-Line EX Connectors

Introduction

The Amphenol/Pyle Star-Line Insert Configuration Listing is issued primarily to identify various contact insert arrangements. For the engineer, it provides visual selection of the insert configuration needed to satisfy his requirements. For the end user, the list provides general information useful in the termination of plugs and receptacles. To aid the reader, the insert configurations are presented in numerical order, based on the number of contacts in each.

The male insert illustration shown left (and those on the following pages) is shown as it appears when viewed from the front. Contacts are shown by both physical position within the configuration and by contact number. The contact number corresponds to the contact position shown on the rear face of the insert illustrated as well as to both the front and rear faces of the mating insert. The symbol used to show contact location is indicative of contact size. For example, the contact symbol in this illustration represents a #8 contact. An explanation of contact symbols is presented on each page of the listing. Each drawing also provides data on normal and alternate key positions. Drawings are reduced from actual size of the insert configuration.

NOTE: Alternate keying or insert polarization is intended to resist improper intermating of plugs and receptacles of like shell sizes and like insert arrangements.

Contact Insert Ordering

Plug and receptacle contact inserts are selected according to requirements for Service Voltage Rating, Number of Contacts, Wire Size and Ampere Rating.

Mod I and II inserts may be purchased separately for assembly into the basic barrel. The Catalog Number for each is shown on the chart accompanying each drawing. Pin or socket inserts are interchangeable in male and female barrels.

Mod III inserts, as a unit, cannot be purchased separately because contact inserts are factory assembled to, and sealed in, the basic barrel. The Dash Number given with each Mod III configuration must be shown as a suffix to the basic barrel Catalog Number to identify the insert desired.

Arrangements are available with high amperage RADSOK® contacts specifically designed for Star-Line inserts. These are designated with an 'R' in the part number. For example: ZP-C28-R42PR would designate an insert with size 4/0 RADSOK pin contacts. ZP-C28-R42SR would designate an insert with size 4/0 socket contacts.

ELECTRICAL Ratings

Service Voltage Ratings

The voltage to which contact inserts are limited is a function of the dielectric separation between adjacent contacts and between contacts and shell

The voltage rating is designated by a service voltage rating letter which is shown in the service voltage rating table with each contact configuration listing.

		itary	N.E.O	C. Ratings			
	Ratings MIL-5015 Specifications Non-Circuit Breaking		Non- Circuit	Circuit Breaking	Over Surface Distance Inches	Thru-Air Spacing Inches	
Service Voltage	D.C. Volts RMS	A.C. Volts RMS	D.C. A.C. RMS RMS		Nominal	Nominal

В	2450	1750	600	600	5/16	1/4	
С	4200	3000	600	600	1	5/16	

Three Classifications of Ampere Ratings MS Ampere Ratings: (MIL-C-39029)

Based on the combination of the following:

The amount of current which an individual pin and socket contact may carry is a function of contact material and design efficiency of the pin and socket system as well as the ability of the primary conductor insulation to resist temperature rises due to inherent copper losses and bundling factors.

Total current carrying capacity of the connector is a function of the insert temperature which is rated at 225° F for continuous operation. The total operating temperature is the summation of the ambient temperature plus the temperature rise resulting from the thermal losses of each contact.

MIL-W-5088 specifications may be used as a general reference on the subject inasmuch as pertinent cable derating data is included.

N.E.C. Non-Circuit-Breaking or Disconnect Ampere Ratings

The non-interrupting current ratings, shown in the table, are based on the temperature of the contacts being within the range specified by Underwriter's Laboratories, Inc. when wire sizes are selected in accordance with the National Electrical Code.

When multiple conductors are used, the load factor and temperature rise based on ambient and total insert temperature must be taken into consideration..

Contact Size	Brea	Circuit Iking e Rating	† MV Drop			
AWG/ MCM	MS	***		Crimp Contacts		
#18	_	9	22	30		
#16	13	16	21	29

535 MCM	_	839	_	_		
646 MCM	_	937	_	_		
777 MCM		1048	_			

NOTE: The N.E.C. circuit breaking and non-circuit breaking ratings are based on test results of contacts and connectors. Consult the N.E.C. when selecting wire/cable for specific applications. Under certain conditions, a wire size may be rated higher or lower than the table indicates for a given contact size.

- † Measurements made at extreme ends of mated contacts with probe touching contact and wire (MIL-5015 specifications).
- ** Based on temperature rise (National Electrical Code Requirement).
- *** Based on Arcing Control (National Electrical Code Requirement).

Spare/Replacement Contacts for MOD II and MOD III Inserts

Contacts are machined copper alloy ranging in size (AWG) from #18 to 500 MCM.

Standard line contacts are silver plated but can also be furnished with gold over silver, gold over nickel, and other combinations of plating systems available upon request.

Pin contacts are of blended geometry to provide extra strength and protection against damage. Socket contacts are the closed entry type.

Contacts for MOD I inserts are not listed because these inserts are factory assembled and damage may be done to the resilient center insulation if contacts are inserted or removed by inexperienced personnel in the field.

"W" length represents standard insert length for sizes 12, 16, 20 24 and 28. "C" length represents longer insert length for sizes C20, C24 and C28. Contacts in "C" length inserts are 1/2" longer than standard. Ground contacts are 1/8" longer than standard. Ground clips are part of inserts. "C' length ground contacts are 1/8" longer than "C" length line contacts.

Note: For RADSOK contact availability consult Amphenol Industrial Operations.

Termination Data

Amphenol – Pyle Connectors Corporation's tools for contact crimping, insertion and removal are required for terminating and assembling contacts.

^{**} Stranded wire

Thermocouple Contacts

Thermocouple contacts are available for use in all insert configurations. Contact can be either purchased separately or included in the insert/connector-please coordinate with the factory on this latter option. For crimp terminations-see tools shown on page 76. When soldering, please adhere to the following procedures: (1) clean wire and solder well with stainless scratch brush. (2) Use Handy and Harman Silver Solder Flux. (3) Use Handy and Harman AMS 2665 Silver Solder with flame torch. *IMPORTANT-Use* extreme care to prevent overheating the female contact, otherwise tension will be lost and result in poor contact. (4) Clean flux from all surfaces using boiling water or steam.

Table Temperature Range of Thermocouple Material

	Temperature Range						
Material*	Degrees	Short Time					
	Continuous						
Electrolytic Copper	190-350°C	to 600°C					
& Constantan							
Chromel & Constantan	0-900°C	to 1100°C					
Iron & Constantan	0-1100°C	to 1100°C					
Chromel & Alumel	0-1100°C	to 1350°C

When mounting two or more receptacles to a panel, a certain distance must be kept, one from the other, so that the coupling nut of one plug does not interfere with the coupling nut of another.

For mixed-form sizes, add dimension "A" for each and divide by two.

Shell Size	Dimension A
12	3
16	3-1/2
20/C20	4-1/4
24/C24	4-3/4
28/C28	5-1/4

^{**}Maximum panel thickness may be increased 1/8" when using Standard Coupling Nut Plugs.

Connector Accessories

Cable Adapters Used on Types ZPLD & ZRLD

To order cable adapters complete with grommet, substitute the cable diameter code number for the delta **\(\)** (see page 67).

Connector Accessories - Protection Covers & Caps

Environmental Covers with Chain

Environmental covers are furnished with a six-inch length of stainless steel link chain. The chain is freely attached to a shouldered swivel post to avoid twisting when covers are applied or removed. The opposite end has a stainless steel ring for back of barrel attachment or a stainless steel eyelet for flange screw or separate screw attachment.

Example: ZP-W-5512-A (Starline) SP-W-5512-A (Star-Lok)

Connector Accessories - Protection Covers & Caps

Hinged Spring Door Covers-Gasketed

Covers have a stainless steel band to clamp over the coupling thread of female receptacles. The cover plate with a captive rubber gasket is pressed aluminum. A self-aligning seal is assured by the floating action of the cover on the center stainless-steel shouldered post. The hinge arm and support are machined aluminum extrusions.

Conduit System Accessories

FS and FD Conduit Adapter Covers and Conduit Fitting Bodies

Adapter covers and Bodies have environmental resistance adequate for most general applications.

All adapter covers are supplied with screws and clips for mounting receptacle as well as bolts, washers and gasket for mounting cover to panel or conduit fitting body.

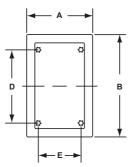

Cast aluminum alloy adapter covers accept type ZRLP barrels.

Contact Crimping Tools

TP-201411-AG

TP-201328 Crimping Tool Only and Accessories for Contacts #12 through #4/0

TP-201411-AG HAND CRIMP TOOL COMPLETE

This tool is complete with 3 contact locators and instructions, and will crimp all contacts #10 through #18 of the Mod II and Mod III design.

TP-201411-TO Hand crimp tool only (less locators)

TP-201411-16-18 Locator only for #16 and #18 pins and sockets

TP-201411-10-12 Locator only for #10 pin and sockets and #12 sockets

TP-201411-12P Locator only for all #12 pins any length

TP-201351-AG HAND CRIMP TOOL

This tool is complete with carrying case, checking gage and complete instructions for crimping #10 through #18 contacts of MOD II or MOD III design.

TP-201351-TC HAND CRIMP TOOL

This tool crimps #18 - #20 contacts utilizing thermocouple wire.

TP-201351-TL HAND CRIMP TOOL

This tool crimps #8 contacts only.

Thomas & Betts TOOL NUMBER TBM15 AND DIE NUMBER 15505

Insertion and Removal Tools for MOD II & MOD III

Tools for Crimp Type Contacts

Insertion Tools

Used for inserting contacts after they are terminated to conductor. Pin and socket contacts have identical terminal ends; the same tool is used for both.

A separate expander barrel is required for each cavity of the contact inset.

An even number of long and short barrels should be used: Example: if the insert contains four cavities, use two long (EBL) and two short (EBS). Insert the short ones first and remove them last.

NOTE: EBS = Expander Barrel Short, EBL= Expander Barrel Long.

Size	Insertion Tool Catalog No.		Replacement Tips
18	TP-201047-1	Use Same	TP-201047-PA
16	TP-201048-1	Tool for	TP-201048-PA
12	TP-201049-1	Pin or	TP-201049-PA
10	TP-201046-1	Socket	TP-201046-PA

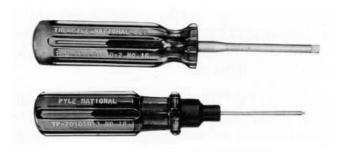

Size	Expander Barrel Catalog No.	Tapered Lead Style	T-Bar Handle Style
8	TP-201007-A	TP-201007-B	_
4	TP-201033-A	TP-201033-B	_
0	TP-201000-EBL	TP-201000-TL	TP-201000-TH
0	TP-201000-EBS		

The T-Bar handle should be used in the insertion and extraction of the expander barrel for the 1/0 cavities – only one is required.

One tapered lead required only.

Removal Tools

Used for extracting contacts from the insert assembly after contacts have been seated. Expanders and taper leads are required for sizes 8, 4, 1/0 MOD II contacts only.

Removal Tools for MOD II

Note: TMPC Connectors are rated at 1000 Volts AC/DC when mounted on 5" centers. Material is copper alloy, silver plated for maximum conductivity and corrosion resistance.

Recommended crimping tools are as follows: Anderson (Square D) Versa Crimp VC8 (four indent).

STAR-LINE Connector Assembly and Termination Instructions

Proper assembly of multiple-contact connectors, for the most part requires common sense. The simplicity of these instructions is perhaps the reason why they are easily overlooked or taken for granted. These 27 reminders can help eliminate connector failures caused by improper assembly.

- Read the assembly instructions carefully before actually starting to assemble connectors. Besides the matter of instruction on correct procedures, there are two important reasons for this preliminary step: To identify the various component parts, and to check for any missing parts.
- 2. Cut cable jackets and sheathing squarely and to correct length, using only wire strippers that have been approved for the operation. In preparing the individual wires in cables and harnesses for assembly, make allowances in length for reaching the outermost circle of contact cavities in the connector insert. This, of course, means that the conductors and the insulation should be cut progressively longer as they extend out from the center of the cable or harness to assure sufficient length for any necessary forming.
- Follow specifications covering maximum cable stripping lengths for efficient cable grommet sealing. All wires should be cut squarely so that they will fit into contact wire wells correctly.
- 4. Before starting actual termination wires, it is essential that cables and harnesses be laid out in a specified order in accordance with the wiring diagram. Proper layout will reduce the need for twisting and crossover of conductors. If the wiring layout is not correct, the termination operation will be difficult or even impossible and the chances for making errors will be increased. Cable and harness assemblies having a spiral layout also must be matched carefully to the correct contacts in both the male and female inserts.
- 5. Some cables have a soft filler or braid on the conductors which, compresses when external pressure is applied. As a result, the cable diameter may be reduced to a point where the sealing range of the grommet is exceeded. In addition, the seal may take a permanent set and further reduce sealing efficiency. To avoid leakage at the seal under these conditions, it is suggested that, where construction of the cable permits, a metal ferrule be slipped under the cable jacket at the stressed position. This ferrule will serve as a compression supporting member and enable the gland seal to withstand high external pressures.
- Use only correct size sealing grommets to assure resistance to moisture and other contaminants. Make certain that cable jacket is smooth where grommet is to seal. Remove any grooves or ridges if present by sanding or scarfing.
- Use only the proper crimping tools that have been set or calibrated with precision gages.
- 8. When contacts are to be soldered, avoid direct contact of soldering tools to inserts. An open flame or hot soldering tip can carbonize insulating materials and make them useless.
- Make certain that all contacts are the correct size before attempting to assemble them into insert cavities. This point is particularly important when both power and control types of contacts are used in the same connector.
- Be sure that grounding contacts are correctly located.
- Seat all contacts properly so that they will not be damaged or become disengaged during connector mating operations.
- Use only the proper insertion tools and be sure that they are aligned axially when pushing contacts into their fully seated position.

- 13. When inserts have more cavities than conductors, plug unused cavities with either plain contacts or special seal plugs designed for the purpose. Some connectors require both a contact and seal plug in unused cavities to meet military specifications and to assure complete internal environmental sealing.
- 14. After all terminated contacts are inserted in their respective cavities and inspected, the cable adapter or insert clamp nut should be tightened with a wrench. This assembly operation should be done by placing the components in a vise with smooth-faced jaws and using a strap wrench.
- 15. If for any reason terminated conductors have to be removed from an insert because of any assembly error or change in circuitry, be sure to remove the cable clamp or insert clamp nut first before extracting the contact and reinserting it. This step is important because any attempt to remove the contacts when the resilient insulator components are compressed will result in damage.
- 16. When handling cables, use adequate support to prevent damage to the internal wires. Gland nuts and grommets are intended for sealing purposes and should not be used as a cable grip.
- If one of the connector poles is a grounding wire, make sure that it is grounded properly before the connector is actually engaged.
- 18. When connectors having the same configuration are to be mounted close together, different or alternate keying arrangements should be used to prevent mismating or cross-mating and possible damage to the electrical system or human injury.
- Always inspect all aspects of connector assembly operations before putting connectors into actual operation.
- Crimping and terminating of conductors to contacts must be done carefully. Make certain that wire strands are fully bottomed in contact wells by checking through inspection hole provided.
- 21. Soldering conductors to contacts must be done carefully and a non-conductive flux should be used to avoid corrosion or hygroscopic action. Do not use solder salts or acids because they may affect the dielectric properties of insulation materials.
- 22. Be careful not to damage wire grommets or contact retaining collets when inserting or extracting contacts.
- 23. Never try to straighten bent contacts. Straightening cannot be done properly and the plating on contacts will very likely be marred. This will result in a high resistance connection and will expose the base metal to possible corrosion.
- 24. Do not attempt to remove inserts that are bonded or locked in place in their shells.
- 25. Be certain that all components of connectors are assembled. Each part performs a vital function and it would not be included if it wasn't useful.
- 26. Each assembler of connectors should be his own inspector.

 Assembly workmanship is a significant factor in determining the quality of multiple-contact connectors. Quality cannot be "inspected" into connectors; it must be "built-in" during each and every assembly operation.
- 27. When potting connectors be sure to apply potting only in mated condition to assure that contacts will align properly.

STAR-LINE Connectors with RADSOK® Contacts

RADSOK Contact Design:

- Socket cylinder within female contact has several equally spaced longitudinal beams twisted into a hyperbolic shape.
- As male pin is inserted, axial members in the female half deflect, imparting high current flow across the connection with minimal voltage loss.
- The hyperbolic, stamped grid configuration ensures a large, coaxial, face-to-face surface area engagement.
- Ideal for crimp termination applications requiring repeated mating cycles and high current with a low milli-volt drop.

Certain designs are available for variable frequency drive (VFD) applications. Consult Amphenol Industrial Operations for further information.

The new RADSOK contact design has been incorporated into the Star-Line connector family of connectors.

Insert arrangements with RADSOK's are shown in this catalog. For information on availability of additional inserts with RADSOK's consult Amphenol Industrial Operations.

Amphe-Power connectors with

RADSOK sockets can handle up to 150% higher amperages than connectors with standard contacts. Current Amphe-Power product lines support from 50A to 500A continuous duty. RADSOK contacts are available in size 8 (69 amps), size 4 (120 amps), and size 0 (250 amps).

RADSOK Contact Advantages:

- Low contact resistance the RADSOK contact's multiplicity of flat grid surfaces assures the greatest possible contact area on the mating pin.
 This results in longer life - reduced contact pressure yields reduced wear.
- Low milli-volt drop performance due to the intimate contact provided by the spring force of the grid, the flat contact surface and the wiping action during insertion.
- Higher current capacity with minimized temperature rise. Lower overall
 contact resistance reduces heat build-up, thereby allowing higher current
 capacities at given temperature limits. Connectors with RADSOK contacts
 may be produced in various sizes with a variety of amperage capabilities.
- Reliability under vibration and shock. System inertia is minimized by the small package and the fact that the contact is under a spring load.
- High quality, consistency and lower cost with high speed, automated precision stamping and assembly technology

See Brochure SL-391, Amphenol Amphe-Power Connectors with RADSOK Technology for more information on other Amphenol connector types that incorporate RADSOK contacts.

Additional Amphenol[®] Industrial Connector Products

Neptune® Series

Amphenol Industrial Operations has introduced a new power connector family that features the Amphenol exclusive RADSOK® contact system. This new Neptune® connector series is designed to perform in the most demanding environments. It features the same aluminum constructions with anodic hardcoat plated components as the Star-Line product.

The RADSOK contact provides increased amperage. See page 81 for more information on RADSOK contact features and benefits.

Other features: 30 Amp through 400 Amp/480 Volt inserts available; decreased weight and panel layout compared to competition; double lead Acme threads for easy coupling.

Used in oil exploration equipment, convention center power distribution, portable power distribution equipment, geophysical trucks, and communication shelters.

Reference Product Data Sheet #192

Amphenol Cord Grips

Amphenol's industrial product offering also includes a wide variety of cord grips that provide liquid tight strain relief for cord, cable and flexible conduit. They have threaded coupling for panel board or threaded hub applications. Straight, 45 degree or 90 degree styles. Moisture sealing is provided with oil-resistant grommets and compression nuts. Tapered conduit threads assure strong water and oil-tight joints. UL listed and CSA certified.

Reference Catalog 12-055

Amphenol Cable Glands

Amphenol Industrial Operations, the worldwide leader of explosion proof and hazardous environment interconnects, introduces a broad range of explosion proof and industrial cable glands. The cable gland products are designed to perform in the most demanding environments. Amphenol provides a complete line of EX Zone 1 and 2 rated cable glands along with general duty cable glands that are suitable for armored and unarmored cable. Brass and stainless steel types are available. IP66/68; deluge; NEMA rated products. SIRA/ATEX certified to Exd/Exe (Class I, Div. I) and CSA approved.

Reference Catalog 12-055

Overmolded Cable Assemblies

Cables can be designed with a custom overmold to any Amphenol cylindrical connector for almost any industrial application. Overmold seals to the rear of the connector and to the cable jacket providing moisture sealing. A variety of materials are available: Neoprene, Hypalon and others. Lengths and configurations are designed to meet customer specifications.

Consult Amphenol Industrial Operations, Sidney, NY

Amphenol's combination of cable glands and cord grip products, along with their design and manufacturing expertise in cable assemblies makes Amphenol Industrial the one-stop supplier for connector and cable sealing solutions.

Additional Amphenol[®] Industrial Connector Products

MIL-5015

Amphenol has long been the accepted leader in providing MS/Standard MIL-5015 type connectors. The Amphenol MS/Standard product is a large family of time-tested medium to heavyweight connectors with resilient inserts, threaded coupling. Other features include: over 200 insert arrangements, both crimp and solder terminations, plating options including cadmium-free.

There are five classes to meet different requirements: A- solid shell, for general, non-environmental applications; C- pressurized, for use on pressurized bulkheads or pressure barriers; E/F - environmental resisting with strain reliefs, designed for applications where the connector with be exposed to moisture, vibration and rapid changes in pressure and temperature; R- lightweight environmental resisting, shorter in weight than the E/F classes. Used in heavy equipment, off-road vehicles, mass transportation and power generation.

Reference Catalog 12-020

GT-Series

Amphenol GT Series of connectors are heavy duty, rugged and environmentally resistant. They have reverse bayonet coupling which provides quick mating, audible, visual and tactile full mating indicators. They incorporate 5015 inserts, available in Neoprene, Viton or low smoke/flame retardant material. Over 40 varieties of shell styles and backend accessory combinations. Rugged construction - aluminum or stainless steel components. Other features and benefits include: UL recognized; rated to 2000 couplings min., available in both crimp and solder terminations. Numerous military and commercial finishes available including cadmium free zinc alloy. Used in mass transportation, power generation, petrochemical applications, heavy equipment and geophysical applications.

Reference Catalog 12-024

MIL-C-26482

A medium size cylindrical connector family with a wide variety of styles. MS versions are produced in strict accordance to MIL-C-26482, Series 1 with several non-MS types also offered. MS-PT Service classes E, F and F types are UL recognized.

Styles include three point bayonet coupling, crimp, solder or printed board termination. Resilient inserts provide high dielectric strength and moisture barrier. There are 7 shell styles including hermetics, and 57 insert patterns. Variety of finishes, contact options and backend accessories options.

Used in instrumentation, machine tool, communications and geophysical applications.

Reference Catalog 12-070

Amphe-Lite Series

Amphenol offers a commercial 38999, Series III type connector for higher performance industrial usage. This family offers 38999 type high performance capabilities for severe environment applications, yet is cost effective enough for general duty and non-environmental use as well. There is a class which provides an excellent EMI shielding and a class that provides a non-conductive finish. Composite shells resist severe corrosion. The Amphe-lite series has 3 shell styles and 59 insert patterns available. It offers wide versatility in contact options such as twinax, coax, filter contacts and fiber optic termini, which makes it ideal for usage in communications equipment, medical equipment and automotive applications.
