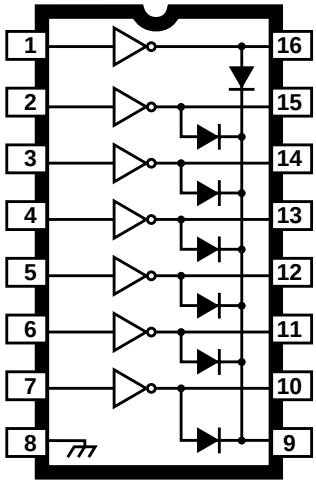
Data Sheet
29304.10A

HIGH-VOLTAGE, HIGH-CURRENT DARLINGTON ARRAY



Dwg. No. A-9594

Note the ULN7003A (DIP) and the ULN7003LW (SOIC) are electrically identical and share a common terminal number assignment.

ABSOLUTE MAXIMUM RATINGS at T_A = +25°C

Output Voltage, V_{CEX} . . . . . 135 V
Output Sustaining Voltage,
$V_{CE(sus)}$ . . . . . 90 V
Output Current, I_C . . . . . 300 mA
Input Current, I_{IN} . . . . . 25 mA
Package Power Dissipation,
P_D . . . . . See Graph
Operating Temperature Range,
T_A . . . . . -20°C to +85°C
Storage Temperature Range,
T_S . . . . . -55°C to +150°C

Output current may be limited by duty cycle, number of drivers operating, ambient temperature, and heat sinking. Under any set of conditions, do not exceed the specified maximum current rating or a junction temperature of 150°C.

Integrating seven high-voltage, high-current npn Darlingtons into a monolithic power array, the ULN7003A AND ULN7003LW are designed for interfacing between TTL or CMOS logic and a variety of peripheral loads. The seven open-collector Darlington outputs are specified for 135 V minimum breakdown and 90 V minimum sustaining. Included are integral power diodes for switching inductive loads. Typical applications include relays, lamps, print heads and hammers, solenoids, and level shifting to power discretes.

The ULN7003A/LW include input current-limiting resistors compatible with the drive capabilities of TTL and (most) CMOS operating at a nominal logic supply of 5 V. Operation with 12 V CMOS may require additional input current limiting.

The high sustaining voltage rating of this power array makes it ideal for inductive load applications where Zener diode flyback techniques are used. The increased flyback voltage provides a much faster inductive load turn-off current decay that is especially useful with dc stepper motors, solenoids, and print heads.

Both devices are pinned with outputs opposite inputs to facilitate ease of circuit board layout. The ULN7003A is supplied in a 16-pin plastic dual in-line package with a copper lead frame to maximize device power dissipation capabilities. The ULN7003LW is furnished in a 16-lead small-outline wide-body package for surface-mount applications.

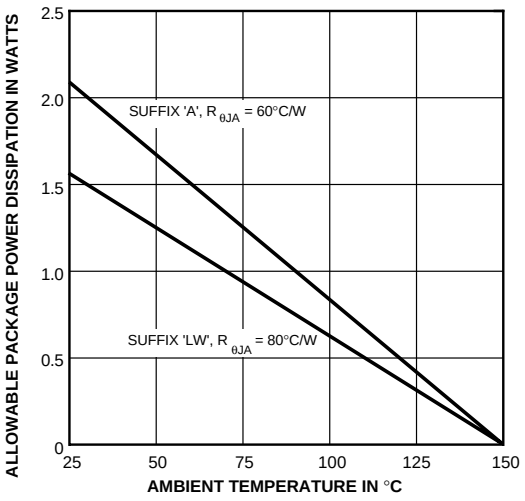
FEATURES

- 135 V Minimum Output Breakdown
- 90 V Minimum Sustaining Voltage
- 300 mA Output Current
- Internal High-Current Clamp Diodes
- Logic-Compatible Inputs

Always order by complete part number:

Part Number	Package
ULN7003A	16-Pin DIP
ULN7003LW	16-Lead SOIC

7003
HIGH-VOLTAGE, HIGH-CURRENT DARLINGTON ARRAY



Dwg. GP-018B

A Zener diode can be used to increase the flyback voltage. This gives a much faster inductive load turn-OFF current decay. The maximum Zener voltage plus the load supply voltage plus the internal diode forward voltage must not exceed the device's rated sustaining voltage.

ELECTRICAL CHARACTERISTICS at T_A = +25°C (unless otherwise noted).

Characteristic	Symbol	Test Conditions	Limits			
			Min.	Typ.	Max.	Units
Output Leakage Current	I_{CEX}	V_{CE} = 135 V	—	—	50	µA
		V_{CE} = 135 V, T_A = +70°C	—	—	100	µA
Output Sustaining Voltage	$V_{CE(sus)}$	I_C = 250 mA, L = 2 mH	90	—	—	V
Output Saturation Voltage	$V_{CE(SAT)}$	I_C = 100 mA, I_{IN} = 250 µA	—	1.1	1.3	V
		I_C = 250 mA, I_{IN} = 350 µA	—	1.3	1.6	V
Input Current	$I_{IN(ON)}$	V_{IN} = 3.85 V	—	0.93	1.35	mA
	$I_{IN(OFF)}$	I_C = 500 µA, T_A = +70°C	50	65	—	µA
Input Voltage	$V_{IN(ON)}$	V_{CE} = 2.0 V, I_C = 200 mA	—	—	2.4	V
		V_{CE} = 2.0 V, I_C = 250 mA	—	—	2.7	V
Input Capacitance	C_{IN}		—	15	25	pF
Switching Delay	t_{pd}	Turn On, I_C = 250 mA	—	0.05	1.0	µs
		Turn Off, I_C = 250 mA	—	0.5	1.0	µs
Clamp Diode Leakage Current	I_R	V_R = 150 V	—	—	50	µA
		V_R = 150 V, T_A = +70°C	—	—	100	µA
Clamp Diode Forward Voltage	V_F	I_F = 250 mA	—	1.7	2.0	V
