

4.5Ω Dual SPST Analog Switches in UCSP

General Description

The MAX4721/MAX4722/MAX4723 low-voltage, low on-resistance (R_{ON}), dual single-pole/single throw (SPST) analog switches operate from a single +1.8V to +5.5V supply. These devices are designed for USB 1.1 and audio switching applications.

The MAX4721/MAX4722/MAX4723 feature 4.5Ω R_{ON} (max) with 1.2Ω flatness and 0.3Ω matching between channels. These new switches feature guaranteed operation from +1.8V to +5.5V and are fully specified at 3V and 5V. These switches offer break-before-make switching (1ns) with t_{ON} <80ns and t_{OFF} <40ns at +2.7V. The digital logic inputs are +1.8V logic compatible with a +2.7V to +3.6V supply.

These switches are packaged in a chip-scale package (UCSP™), significantly reducing the required PC board area. The chip occupies only a 1.52mm × 1.52mm area and has a 3 × 3 bump array with a bump pitch of 0.5mm. These switches are also available in an 8-pin μMAX package.

Applications

Battery-Operated Equipment
Audio/Video-Signal Routing
Low-Voltage Data-Acquisition Systems
Sample-and-Hold Circuits
Communications Circuits

Rail-to-Rail is a registered trademark of Nippon Motorola, Ltd.
UCSP is a trademark of Maxim Integrated Products, Inc.

Features

- ◆ USB 1.1 Signal Switching
- ◆ <2ns Differential Skew
- ◆ -3dB Bandwidth: >300MHz
- ◆ Low 15pF On-Channel Capacitance
- ◆ Low R_{ON} (max) Switches
4.5Ω (max) (+3V Supply)
3Ω (max) (+5V Supply)
- ◆ 0.3Ω (max) R_{ON} Match (+3V Supply)
- ◆ 1.2Ω (max) R_{ON} Flatness (+3V Supply)
- ◆ <0.5nA Leakage Current at $T_A = +25^\circ\text{C}$
- ◆ High Off-Isolation: -55dB (10MHz)
- ◆ Low Crosstalk: -80dB (10MHz)
- ◆ Low Distortion: 0.03%
- ◆ +1.8V CMOS-Logic Compatible
- ◆ Single-Supply Operation from +1.8V to +5.5V
- ◆ Rail-to-Rail® Signal Handling

Ordering Information

4.5Ω Dual SPST Analog Switches in UCSP

ABSOLUTE MAXIMUM RATINGS

(All Voltages Referenced to GND, Unless Otherwise Noted.)

V+, IN_	-0.3V to +6.0V
COM_, NO_, NC_ (Note 1)	-0.3V to (V+ + 0.3V)
Continuous Current COM_, NO_, NC_	±100mA
Peak Current COM_, NO_, NC_ (pulsed at 1ms, 10% duty cycle)	±200mA
Continuous Power Dissipation (T _A = +70°C)	
8-Pin μMAX (derate 4.5mW/°C above +70°C)	362mW
9-Bump UCSP (derate 4.7mW/°C above +70°C)	379mW

ESD Method 3015.7	>2kV
Operating Temperature Range	-40°C to +85°C
Junction Temperature	+150°C
Storage Temperature Range	-65°C to +150°C
Lead Temperature (soldering, 10s)	+300°C
Bump Temperature (soldering) (Note 2)	
Infrared (15s)	+220°C
Vapor Phase (60s)	+215°C

Note 1: Signals on COM_, NO_, or NC_ exceeding V+ or GND are clamped by internal diodes. Limit forward-diode current to maximum current rating.

Note 2: This device is constructed using a unique set of packaging techniques that impose a limit on the thermal profile the device can be exposed to during board level solder attach and rework. This limit permits only the use of the solder profiles recommended in the industry standard specification, JEDEC 020A, paragraph 7.6, table 3 for IR/VPR and convection reflow. Preheating is required. Hand or wave soldering is not allowed.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS—Single +3V Supply

(V+ = +2.7V to +3.6V, V_{IH} = +1.4V, V_{IL} = +0.5V, T_A = T_{MIN} to T_{MAX}, unless otherwise noted. Typical values are at V+ = +3.0V, T_A = +25°C, unless otherwise noted.) (Notes 3, 4)

ELECTRICAL CHARACTERISTICS—Single +5V Supply (continued)

($V_+ = +4.2\text{V}$ to $+5.5\text{V}$, $V_{IH} = +2.0\text{V}$, $V_{IL} = +0.8\text{V}$, $T_A = T_{MIN}$ to T_{MAX} , unless otherwise noted. Typical values are at $V_+ = +5.0\text{V}$, $T_A = +25^\circ\text{C}$, unless otherwise noted.) (Notes 3, 4)

PARAMETER	SYMBOL	CONDITIONS	T_A	MIN	TYP	MAX	UNITS
Input Leakage Current	I_{IN}	$V_+ = 5.5\text{V}$, $V_{IN_} = 0\text{V}$ or V_+	T_{MIN} to T_{MAX}	-0.1		+0.1	μA
POWER SUPPLY							
Power-Supply Range	V_+		T_{MIN} to T_{MAX}	1.8		5.5	V
Positive Supply Current	I_+	$V_+ = 5.5\text{V}$, $V_{IN_} = 0\text{V}$ or V_+	T_{MIN} to T_{MAX}			1	μA

Note 3: UCSP parts are 100% tested at $+25^\circ\text{C}$ only, and guaranteed by design over the specified temperature range. μMAX parts are 100% tested at T_{MAX} and guaranteed by design over the specified temperature range.

Note 4: The algebraic convention used in this data sheet is where the most negative value is a minimum and the most positive value is a maximum.

Note 5: Guaranteed by design for UCSP parts.

Note 6: $\Delta R_{ON} = R_{ON(MAX)} - R_{ON(MIN)}$.

Note 7: Flatness is defined as the difference between the maximum and minimum value of on-resistance as measured over the specified analog signal ranges.

Note 8: Guaranteed by design.

Note 9: Off-Isolation = $20\log_{10}(V_{COM} / V_{NO})$, V_{COM} = output, V_{NO} = input to off switch.

Note 10: Between any two switches.

Detailed Description

The MAX4721/MAX4722/MAX4723 dual SPST analog switches operate from a single +1.8V to +5.5V supply. The MAX4721/MAX4722/MAX4723 offer excellent AC characteristics, <0.5nA leakage current, less than 2ms differential skew, and 15pF on-channel capacitance. All of these devices are CMOS-logic compatible with rail-to-rail signal handling capability.

The MAX4721/MAX4722/MAX4723 are USB-compliant switches that provide 4.5Ω (max) on-resistance, and 15pF on-channel capacitance to maintain signal integrity. At 12Mbps (USB full-speed data rate specification) the MAX4721/MAX4722/MAX4723 introduce less than 2ns propagation delay between input and output signals and less than 0.5ns change in skew for the output signals (see Figure 3 for more details).

The MAX4721 has two normally open (NO) switches, the MAX4722 has two normally closed (NC) switches, and the MAX4723 has one NO switch and one NC switch.

Applications Information

Digital Control Inputs

The MAX4721/MAX4722/MAX4723 logic inputs accept up to +5.5V regardless of supply voltage. For example, with a +3.3V supply, IN₊ can be driven low to GND and high to +5.5V allowing for mixing of logic levels in a system. Driving the control logic inputs rail-to-rail minimizes power consumption. For a +3.0V supply voltage, the logic thresholds are 0.5V (low) and 1.4V (high); for a +5V supply voltage, the logic thresholds are 0.8V (low) and 2.0V (high).

Analog Signal Levels

Analog signals that range over the entire supply voltage (V₊ to GND) are passed with very little change in on-resistance (see the *Typical Operating Characteristics*). The switches are bidirectional, so the NO₊, NC₊, and COM₊ pins can be either inputs or outputs.

4.5Ω Dual SPST Analog Switches in UCSP

Test Circuits/Timing Diagrams

Figure 1. Switching Time

Figure 2. Break-Before-Make Interval

Power-Supply Bypassing

Power-supply bypassing improves noise margin and prevents switching noise from propagating from the V+ supply to other components. A 0.1μF capacitor connected from V+ to GND is adequate for most applications.

Power-Supply Sequencing and Overvoltage Protection

Caution: Do not exceed the absolute maximum ratings because stresses beyond the listed ratings may cause permanent damage to the device.

UCSP Package Considerations

For general UCSP package information and PC layout considerations, please refer to the Maxim Application Note (Wafer-Level Chip-Scale Package).

UCSP Reliability

The chip-scale package (UCSP) represents a unique packaging form factor that may not perform equally to a packaged product through traditional mechanical reliability tests. UCSP reliability is integrally linked to the user's assembly methods, circuit board material, and usage environment. The user should closely review these areas when considering use of a UCSP package. Performance through Operating Life Test and Moisture Resistance remains uncompromised as it is primarily determined by the wafer-fabrication process.

Mechanical stress performance is a greater consideration for a UCSP package. UCSPs are attached through direct solder contact to the user's PC board, foregoing the inherent stress relief of a packaged product lead frame. Solder joint contact integrity must be considered. Information on Maxim's qualification plan, test data, and recommendations are detailed in the UCSP application note, which can be found on Maxim's website at www.maxim-ic.com.

MAXIM
MAX4721/
MAX4722/
MAX4723

Typical Application Circuit and Timing Diagram for the MAX4721/22/23.

The circuit diagram shows a relay driver configuration. A V_+ supply is connected to the COM_- pin. The NC_- pin is connected to a load resistor R_{GEN} and a V_{GEN} supply. The NO_- pin is connected to a load capacitor C_L and a V_{OUT} supply. The IN_- pin is connected to a pulse source V_{IL} TO V_{IH} .

The timing diagram shows the relationship between the input signal IN , the output voltage V_{OUT} , and the output current ΔV_{OUT} . The output current is shown as a pulse when the input is ON. The formula $Q = (\Delta V_{OUT})(C_L)$ is provided.

LOGIC INPUT WAVEFORMS INVERTED FOR SWITCHES THAT HAVE THE OPPOSITE LOGIC SENSE.

Circuit diagram for the off-isolation test of the MAX4721/22/23. The diagram shows a MAXIM MAX4721/22/23 IC with its NC_ or NO_ pin connected to a signal generator (0dBm) through a 50Ω resistor. The COM_ pin is connected to ground. The IN_ pin is connected to a 0V or V+ source. A capacitor C = 0.1μF is connected between V+ and ground. An analyzer is connected to the output of the IC.

[illegible]

The diagram shows a MAXIM MAX4721/MAX4722/MAX4723 IC. The V+ pin is connected to a positive supply voltage and has a 0.1μF capacitor connected to ground. The NC_ or NO_ pin is connected to one terminal of a capacitance meter. The COM_ pin is connected to the other terminal of the capacitance meter and to ground. The IN_ pin is connected to a 0V or V+ signal. The capacitance meter is labeled with f = 1MHz.
