Due to technical requirements components may contain dangerous substances. For information on the types in question please contact your nearest Infineon Technologies Office.

Infineon Technologies Components may only be used in life-support devices or systems with the express written approval of Infineon Technologies, if a failure of such components can reasonably be expected to cause the failure of that life-support device or system, or to affect the safety or effectiveness of that device or system. Life support devices or systems are intended to be implanted in the human body, or to support and/or maintain and sustain and/or protect human life. If they fail, it is reasonable to assume that the health of the user or other persons may be endangered.

Features

- CAN data transmission rate up to 1 MBaud
- Receive-only Mode and Stand-by Mode
- Suitable for 12 V and 24 V applications
- Excellent EMC performance (very high immunity and very low emission)
- Version for 5 V and 3.3 V microcontrollers
- Bus pins are short circuit proof to ground and battery voltage
- Overtemperature protection
- Very wide temperature range (-40 °C up to 150 °C)

Description

The HS CAN-transceiver family TLE 6250 (TLE 6250 G and TLE 6250 GV33) are monolithic integrated circuits that are available as bare die as well as in a P-DSO-8-3 package. The ICs are optimized for high speed differential mode data transmission in automotive and industrial applications and they are compatible to ISO/DIS 11898. They work as an interface between the CAN protocol controller and the physical differential bus in both, 12 V and 24 V systems.

The ICs are based on the **Smart Power Technology SPT®** which allows bipolar and CMOS control circuitry in accordance with DMOS power devices existing on the same monolithic circuit. The TLE 6250 G is designed to withstand the severe conditions of automotive applications and provides excellent EMC performance.

Note: There are two versions available (refer to next page).

Type	Ordering Code	Package
TLE 6250 G	Q67006-A9427	P-DSO-8-3
TLE 6250 C	Q67000-A9594	(chip)
TLE 6250 GV33	Q67006-A9523	P-DSO-8-3
TLE 6250 CV33	Q67000-A9538	(chip)

TLE 6250 G

5 V logic I/O version: RxD, TxD, INH, RM. Two Control pins (RM, INH) and 3 operation modes: Normal Mode, Stand-by Mode and Receive Only Mode.

TLE 6250 GV33

3.3 V logic I/O version (logic I/O voltage adaptive to V_{33} pin within the range 3.3 V to 5 V): RxD, TxD, INH. One control pin (INH) and two operation modes: Normal Mode and Standby Mode.

Table 1 Pin Definitions and Functions TLE 6250 G

Pin No.	Symbol	Function
1	TxD	CAN transmit data input; 20 k Ω pull-up, LOW in dominant state
2	GND	Ground
3	V _{CC}	5 V Supply input
4	RxD	CAN receive data output; LOW in dominant state, integrated pull-up
5	RM	Receive-only input; control input, 20 k Ω pull-up, set low to activate RxD-only mode
6	CANL	Low line I/O; LOW in dominant state
7	CANH	High line I/O; HIGH in dominant state
8	INH	Inhibit Input; control input, 20 k Ω pull, set LOW for normal mode

Table 2 Pin Definitions and Functions TLE 6250 GV33

Pin No.	Symbol	Function
1	TxD	CAN transmit data input; 20 k Ω pull-up, LOW in dominant state
2	GND	Ground
3	V _{CC}	5 V Supply input
4	RxD	CAN receive data output; LOW in dominant state, integrated pull-up
5	V _{33V}	Logic supply input; 3.3 V OR 5 V microcontroller logic supply can be connected here! The digital I/Os of the TLE 6250 GV33 adopt to the connected microcontroller logic supply at V _{33V}
6	CANL	Low line I/O; LOW in dominant state
7	CANH	High line I/O; HIGH in dominant state
8	INH	Inhibit Input; control input, 20 k Ω pull, set LOW for normal mode

Application Information

Figure 5 Mode State Diagram

Both, the TLE 6250 G as well as the TLE 6250 C offer three different operation modes (see [Figure 5](#)), controlled by the INH and RM pin. The TLE 6250 GV33 offers only two modes, controlled by the INH (GV33) pin respectively.

In the normal mode the device is able to receive and to transmit messages whereas in the receive-only mode signals at the TxD input are not transmitted to the CAN bus. The receive-only mode can be used for diagnostic purposes (to check the bus connections between the nodes) as well as to prevent the bus being blocked by a faulty permanent dominant TxD input signal. The stand-by mode is a low power mode that disables both, the receiver as well as the transmitter.

In case the receive-only feature is not used the RM pin has to be left open. When the stand-by mode is not used the INH pin has to be connected to ground level in order to switch the TLE 6250 G in normal mode.

Application Information for the 3.3 V Versions

The TLE 6250 GV33 can be used for both; 3.3 V and 5 V microcontroller logic supply, as shown in [Figure 6](#). Don't apply external resistors between the power supply and this pin. This may cause a voltage drop and so reduce the available voltage at this pin.
