Caution

1. This Kyocera LCD module has been specifically designed for use only in electronic devices in the areas of audio control, office automation, industrial control, home appliances, etc. The modules should not be used in medical applications where module failure could result in physical harm or loss of life, and Kyocera expressly disclaims any and all liability relating in any way to the use of the module in such medical applications.

2. Customer agrees to indemnify, defend and hold Kyocera harmless from and against any and all actions, claims, losses, damages, liabilities, awards, costs, and expenses, including legal fees, resulting from or arising out of Customer's use, or sale for use, of Kyocera modules in medical applications.

3. Kyocera shall have the right, which Customer hereby acknowledges, to immediately scrap or destroy tooling for Kyocera modules for which no Purchase Orders have been received from the Customer in a two-year period.

1. Application

This data sheet defines the specification for a (640×R.G.B)×480 dot, STN Transmissive color dot matrix type Liquid Crystal Display with CFL backlight.

2. Construction and Outline

(640×R.G.B)×480 dots, COB type LCD with CFL backlight.

Backlight system   : Side-edge type CFL (2 tube).

Inverter   : Option.
                      Recommended Inverter : KCI-12(MINEBEA ELECTRONICS)
                      or equivalent

Polarizer   : Glare treatment.

Additional circuit : Bias voltage circuit, Randomizing circuit, DC-DC converter
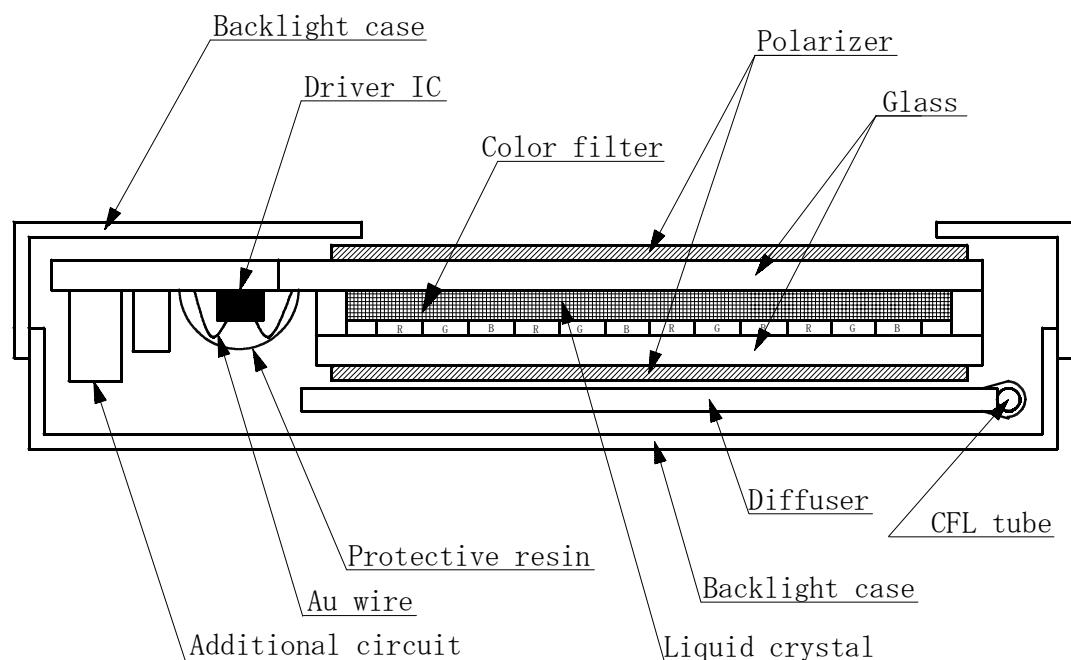

This drawing is showing conception only.

3. Mechanical Specifications

*1 LCD's display quality shall not be guaranteed at the temperature range of :
below 0℃ and upper 40℃.

*2 Temp. = −20℃ < 48 h , Temp = 60℃ < 168 h
Store LCD panel at normal temperature/humidity. Keep it free from vibration and shock.
LCD panel that is kept at low or high temperature for a long time can be defective due to
the other conditions, even if the temperature satisfies standard.

*3 Non-condensation.

*4 Temp. ≦ 40℃, 85% RH Max.
Temp. > 40℃, Absolute Humidity shall be less than 85%RH at 40℃.

5. Electrical Characteristics

ITEM	SYMBOL	CONDITION	MIN.	TYP.	MAX.	UNIT
Supply voltage for logic	VDD	—	3.0	3.3	3.6	V
LCD driving voltage *1	Vop=	0 ℃	0.80	—	—	V
	VCONT	25 ℃	1.35	1.95	2.55	V
		50 ℃	—	—	2.80	V
Input voltage	Vin	"H" level	0.8VDD	—	VDD	V
		"L" level	0	—	0.2VDD	V
Clock frequency	f cp		4.03	4.32	10.0	MHz
Frame frequency *2	f $_{FRM}$		70	75	80	Hz
Current consumption for logic *3	IDD	—	—	120	180	mA
Power consumption	Pdisp		—	396	594	mW

*1 Maximum contrast ratio is obtained by adjusting the LCD supply voltage (Vop= VCONT) for driving LCD.

*2 In consideration of display quality, it is recommended that frame frequency is set in the range of 70-80Hz. When you have to use higher frame and clock frequencies, confirm the LCD's performance and quality prior to finalizing the frequency values: Generally, as frame and clock frequencies become higher current consumption will get bigger and display quality will be degraded.

*3 Display high frequency pattern, (see below).
VDD = 3.3V , Vop = VCONT , f $_{FRM}$ = 75 Hz , fcp = 4.32MHz

	Black	x	$\theta=\phi=0°$		0.24	0.29	0.34	
		y			0.22	0.27	0.32	

Optimum contrast is obtained by adjusting the LCD driving voltage(Vop) while at the viewing angle of $\theta=\phi=0°$.

6-1.Definition of Contrast (Transmissive Mode)

$$CR(Contrast)= \frac{Brightness\ at\ all\ pixels\ ''White''}{Brightness\ at\ all\ pixels\ ''Black''}$$

6-2. Definition of Vop

6-4. Definition of viewing angle

(θ direction)

(φ direction)
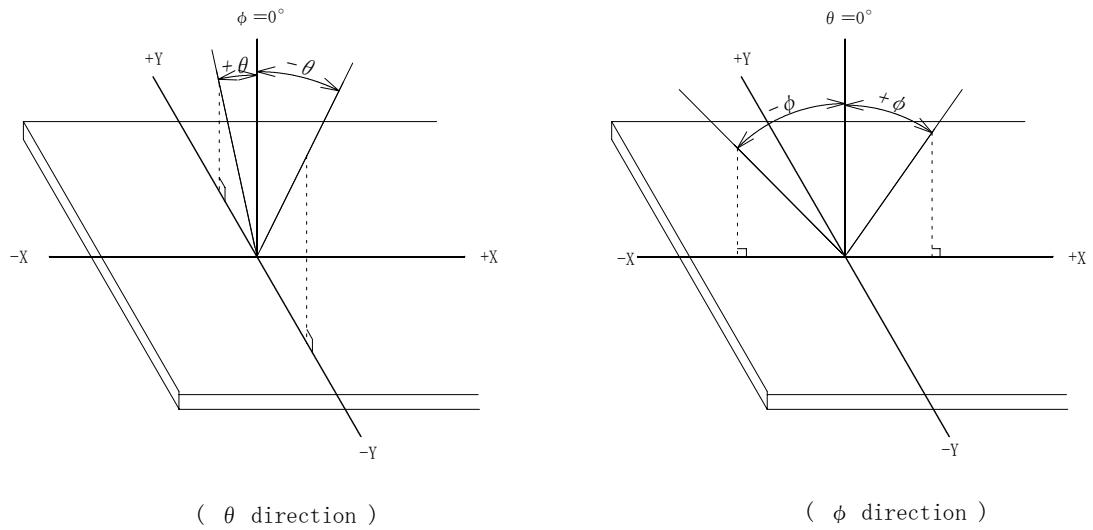

6-5. Measuring points
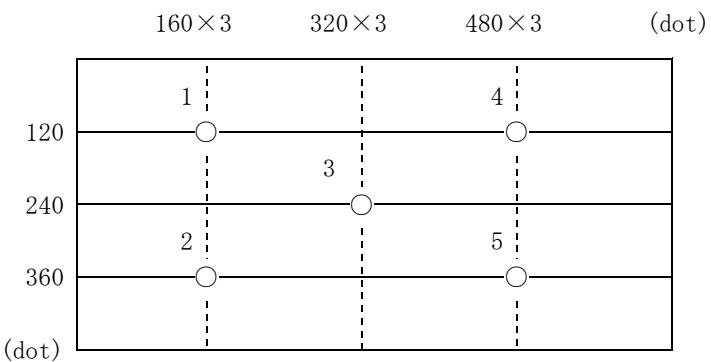

1) Rating is defined as the average brightness inside the viewing area.
2) 30 minutes after CFL is turned on. (Ambient Temp.=25℃)
3) The inverter should meet the eccentric conditions;
   -Sine, symmetric waveform without spike in positive and negative.

*2 The formula of condition
   ① trCP + tfCP ≦ tCCL - (tWCLH + tWCLL)
   ② trCP,tfCP ≦ 30 ns
   Please use on condition that ①,② are filled.

*3 LOAD Cycle is const.

*4 tLC ≧ 0

12. Supply Voltage Sequence Condition

DO NOT apply DC voltage to the LCD panel.
DC voltage induce irreversible electrochemical reactions and reduce LCD life.
Always follow the power supply ON/OFF sequence of VDD first, input signal second, VCONT third and finally DISP.
This will prevent DC driving of the LCD or CMOS LSI latch up as shown below.
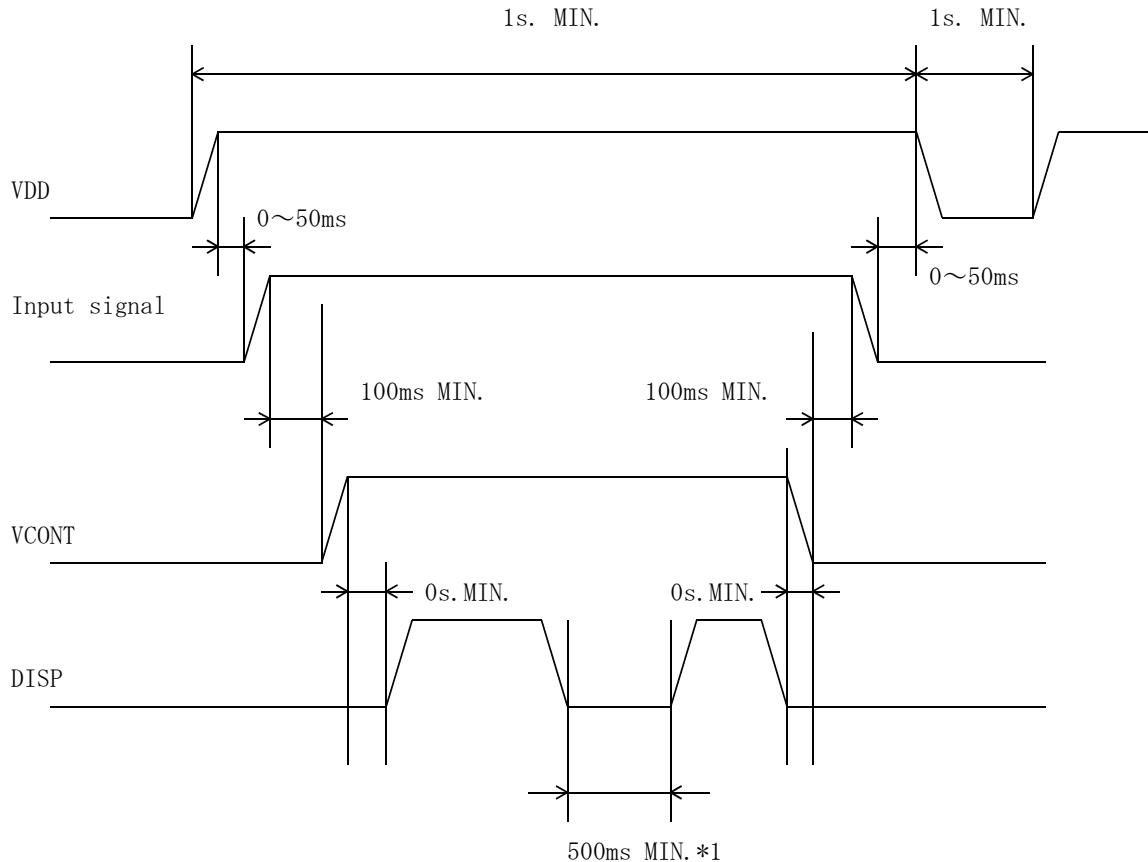

*1 Take interval time for minimum 500ms once you cut off the Disp signal.

* Input signal : CP, LOAD, FRM, HD0～HD7, LD0～LD7

* Control the supply voltage sequence not to float all signal line when the LCD panel is driving.

Operating life *4 (IL=5.0 mArms.)	T	36,000h	54,000h	—	—
Operating frequency	F	20kHz	—	100kHz	—

*1 The Non-load output voltage (VS) of the inverter should be designed to have some margin,
because VS may increase due to the leak current which may be caused by wiring of CFL cables.
(Reference value: 1190 Vrms MIN.)

*2 We recommend that you should set the discharging tube current at lower than typical
value so as to prevent the heat accumulation of CFL tube from deteriorating a performance
of the LCD.

*3 Do not apply more than 6.0mA discharging tube current. Because CFL maybe broken due to
over current.

*4 When the illuminance or quantity of light has decreased to 50 % of the initial value.
Average life time of CFL will be decreased when LCD is operating at lower and Higher
temperature.

14. Lot Number Identification

The lot number shall be indicated on the back of the backlight case of each LCD.

15. Warranty

15-1. Incoming inspection

Please inspect the LCD within one month after your receipt.

15-2. Production Warranty

Kyocera warrants its LCDs for a period of 12 months after receipt by the purchaser,
and within the limits specified.
Kyocera shall, by mutual agreement, replace or rework defective LCDs that are shown to be
Kyocera's responsibility.

16. Precautions for use

16-1. Installation of the LCD

1. Please ground either of the mounting (screw) holes located at each corner of an LCD module, in order to stabilize brightness and display quality.
2. A transparent protection plate shall be added to protect the LCD and its polarizers.
3. The LCD shall be installed so that there is no pressure on the LSI chips.
4. The LCD shall be installed flat, without twisting or bending.
5. The display window size should be the same as the effective viewing area.
6. In case you use outside frame of effective viewing area as outward appearance of your product, unevenness of its outward appearance is out of guarantee.
7. Do not pull the CFL lead wires and do not bend the root of the wires. Housing should be designed to protect CFL lead wires from external stress.

16-2. Static Electricity

1. Since CMOS ICs are mounted directly onto the LCD glass, protection from static electricity is required.
   Operation should wear ground straps.

16-3. LCD Operation

1. The LCD shall be operated within the limits specified.
   Operation at values outside of these limits may shorten life, and/or harm display images.
2. Vop must be adjusted to optimize viewing angle and contrast.
3. Operation of the LCD at temperature below the limit specified may cause image degradation and/or bubbles. It may also change the characteristics of the liquid crystal.
   This phenomenon may not recover. The LCD shall be operated within the temperature limits specified.

16-4. Storage

1. The LCD shall be stored within the temperature and humidity limits specified.
   Store in a dark area, and protected the LCD from direct sunlight or fluorescent light.
2. The LCD should be packaged to prevent damage.

16-5. Screen Surface

1. DO NOT store in a high humidity environment for extended periods.
   Image degradation, bubbles, and/or peeling off of polarizer may result.
2. The front polarizer is easily scratched or damaged.
   Prevent touching it with any hard material, and from being pushed or rubbed.
3. The LCD screen may be cleaned with a soft cloth or cotton pad.
   Methanol, or Isopropyl Alcohol may be used, but insure that all solvent residue is removed.
4. Water may cause damage or discoloration of the polarizer.
   Clean any condensation or moisture from any source immediately.
5. Always keep the LCD free from condensation during testing.
   Condensation may permanently spot or stain the polarizers.

17. Reliability Data / Environmental Test

* Each test item uses a test LCD only once. The tested LCD is not used in any other tests.

* The LCD is tested in circumstances in which there is no condensation.

* The tested LCD is inspected after 24 hours of storage at room temperature and room humidity after each test is finished.

* The reliability test is not an out-going inspection.

* The results of the reliability test are for your reference purpose only.
  The reliability test is conducted only to examine the LCD's capability.
