Description

The SM4T is a termination insensitive mixer, designed for use in military, commercial and test equipment applications. The design utilizes Schottky bridge quad diodes, broadband ferrite baluns and internal loads to provide excellent performance without degradation due to external VSWR mismatches. Environmental screening available to MIL-STD-883, MIL-STD-202, or MIL-DTL-28837, consult factory.

Typical Performance Curves

Conversion Loss

Conversion Loss vs. Drive Level: The minimum recommended drive level is +7 dBm. The maximum recommended drive level is +18 dBm.

Conversion Loss vs. Input Frequency: Conversion loss of the mixer when used in an SSB system. Data plotted for a f_L of 100 MHz with f_L at +10 dBm.

VSWR

VSWR vs. Frequency: VSWR is the L-, I-, and R-ports in a 50 ohm system with f_L at +10 dBm. R- and I-port VSWR plotted with f_L at 1500 MHz.

Isolation

Isolation vs. Frequency: Level of f_L signal fed through to R- and I-port with respect to the level of the f_L signal at L-port. R-I Isolation plotted with f_L at 1500 MHz.
