#### Description

The EZ1082 is a high performance positive voltage regulator designed for use in applications requiring low dropout performance at 10A. Additionally, the EZ1082 provides excellent regulation over variations in line, load and temperature.

Features include 1.3V dropout at 10A, fast transient response, internal current limiting and thermal shutdown protection of the output device. The EZ1082 series are three terminal regulators with fixed and adjustable voltage options available in the popular TO-220 package.

The EZ1082 is an excellent choice for powering microprocessor systems. Using an LDO eliminates MOSFETs and inductors saving both space and cost. An LDO also provides better transient response with no ripple to the load.

#### Features

- ◆ Low dropout performance, 1.3V max.
- ◆ Full current rating over line and temperature
- ◆ Fast transient response
- ◆  $\pm 2\%$  total output regulation over line, load and temperature
- ◆ Adjust pin current max 90 $\mu$ A over temperature
- ◆ Fixed/adjustable output voltage
- ◆ Line regulation typically 0.015%
- ◆ Load regulation typically 0.05%
- ◆ TO-220 3 pin package

#### Applications

- ◆ High current microprocessor supplies
- ◆ Post regulators
- ◆ Microprocessor systems
- ◆ Medical equipment
- ◆ Embedded systems
- ◆ Post regulation for switching supplies
- ◆ Telecommunication systems

### Typical Application Circuit

#### Fixed Voltage Regulator

#### Adjustable Voltage Regulator

#### Notes:

- (1) C1 needed if device is far from filter capacitors
- (2) C2 minimum value required for stability

$$V_{OUT} = V_{REF} \cdot \left(1 + \frac{R2}{R1}\right) + I_{ADJ} \cdot R2$$
