Specific use
Remarks

- The latch stroke, the retraction force and the extension force are value in the horizontal installation.
- The rated voltage (continuous) is at a power consumption that causes the coil temperature to rise to about 65°C when the ambient temperature is 40°C .
- When continuously energized, the solenoid becomes hot (around 70°C). If there is a risk of it being touched, measures should be taken to prevent burns with consideration given to heat radiation.
- Remove the load on the latch when operating electrically.
- A version with the latch tapering in a different direction is also available. Please inquire.
- Solenoid has no polarity (+/-).
