General use electronic governor BA6220

The BA6220 is a monolithic IC designed for controlling the speed of general-purpose DC motors.

The IC consists of a reference voltage generator, current multiplier, comparator, and start-up circuit. The speed of DC motor is controlled by detecting the counter-electromotive force generated by the motor.

Various DC motors can be driven by changing the external constants. A large power dissipation is allowed by grounding the pin connected with the IC substrate.

Applications

Radio cassette tape recorders

Features

- 1) Wide range of operating voltage. $(3.5 \sim 16V)$
- 2) Large starting torque at low supply voltage.
- Large power dissipation allowable by using the PCB as a heat sink.
- Various DC motors can be driven by changing the external constants.

Block diagram

● Absolute maximum ratings (Ta = 25°C)

Parameter	Symbol	Limits	Unit	Conditions	
Power supply voltage	Vcc	18	V	_	
Power dissipation	Pd	1.4*	w	PCB:9cm2 t=1.0	

^{*} Reduced by 11.2 mW for each increase in Ta of 1°C over 25°C.

● Recommended operating conditions (Ta = 25°C)

Parameter	Symbol	Min.	Тур.	Max.	Unit	Conditions
Power supply voltage	Vcc	3.5	_	16	٧	Load: 8g - cm
