FIG-4 TURN-ON TIME

FIG-5 REVERSE BIASE SAFE OPERATING AREA

FIG-6 ACTIVE REGION SAFE OPERATING AREA

There are two limitation on the power handling ability of a transistor: average junction temperature and second breakdown safe operating area curves indicate I_C - V_{CE} limits of the transistor that must be observed for reliable operation i.e., the transistor must not be subjected to greater dissipation than curves indicate.

The data of FIG-6 is base on $T_C = 25^\circ C$; $T_{J(PK)}$ is variable depending on power level. second breakdown pulse limits are valid for duty cycles to 10% but must be derated when $T_C \geq 25^\circ C$, second breakdown limitations do not derate the same as thermal limitation.
