

## General Information

|                             | Page      |
|-----------------------------|-----------|
| General Product Information | 574 - 576 |
| Technical notes             | 577 - 580 |
| Selection diagram           | 581       |

## Sub-miniature Fuses

|                             |           |
|-----------------------------|-----------|
| Chip 0402, 0603, 0805, 1206 | 582 - 585 |
| 2.6 x 6.1 mm (SMD)          | 586 - 587 |
| 4.5 x 8 mm (SMD)            | 588 - 589 |
| 4.5 x 16 mm (SMD)           | 590 - 591 |
| 8.4 x 7.6mm                 | 592 - 596 |
| 2.3 x 8 mm                  | 597       |

## G-Fuse Links

|                         |           |
|-------------------------|-----------|
| 5 x 20 mm               | 598 - 613 |
| 10x 51 mm               | 614       |
| 5 x 25 mm               | 615 - 617 |
| 5 x L mm                | 618       |
| 5 x 30 mm               | 619       |
| 6.3 x 32 mm             | 620 - 629 |
| 8 x 40 mm               | 630       |
| 8 x 50 mm / 8 x 85 mm 8 | 631       |
| x 120 mm / 8 x 150 mm   | 632       |

## G-Fuse Holders and Fuse Bases

633 - 643

RoHS

| 199555  | 640 |    | 6.3x32      | 500V <sub>AC</sub> /250V <sub>AC</sub> | 16A VDE/30A UL  | Fuse holder panel mount, w/o cap, 6.3mm plug               |
| 199552  |     |    |             |                                        |                 | Fuse carrier screw cap for fuse holder                     |
| 7100127 | 640 |    | 6.3x32      | 250V <sub>AC</sub>                     | 10A VDE/16A UL  | Fuse holder PCB mount horizontal w/ bayonet carrier        |
| 7100128 | 640 |   | 6.3x32      | 250V <sub>AC</sub>                     | 10A VDE/16A UL  | Fuse holder PCB mount vertical w/ bayonet carrier          |
| 7100129 | 641 |  | 6.3x32      | 250V <sub>AC</sub>                     | 10A VDE/16A UL  | Fuse holder panel mount w/ bayonet carrier, solder         |
| 199052  | 641 |  | 6.3x32      | 250V <sub>AC</sub>                     | 10A VDE/16A UL  | Fuse holder panel mount w/ screw carrier, solder           |
| 204000  | 642 |  | Ø 5mm       |                                        | 6.3A max        | Press on lead end cap PCB, lead Ø 0.65mm                   |
| 204001  |     |  |             |                                        | 10A max         | Press on lead end cap PCB, lead Ø 0.8mm                    |
| 204002  |     |  |             |                                        | 16A max         | Press on lead end cap PCB, lead Ø 1.0mm                    |
| 204100  | 642 |  | Ø 6.3mm     |                                        | 12.5A max       | Press on lead end cap PCB, lead Ø 0.8mm                    |
| 204101  |     |  |             |                                        | 20A max         | Press on lead end cap PCB, lead Ø 1.0mm                    |
| 199022  | 642 |  | 6.3x32      | 250V <sub>AC</sub>                     | 10A max         | Fuse base PCB                                              |
| 7100114 | 643 |  | 5x20/6.3x32 | 250V <sub>AC</sub>                     | 10A VDE/16A UL  | Fuse holder PCB horizontal mount w/ bayonet                |
| 7100116 |     |                                                                                     | 5x20/6.3x32 | 250V <sub>AC</sub>                     | 10A VDE/16A UL  | Fuse holder PCB vertical mount w/o bayonet                 |
| 7100123 |     |                                                                                     | 5x20/6.3x32 | 250V <sub>AC</sub>                     | 10A VDE/10A UL  | Fuse holder panel mount w/ out carrier, solder             |
| 7100124 |     |                                                                                     | 5x20/6.3x32 | 250V <sub>AC</sub>                     | 10A VDE/20A UL  | Fuse holder panel mount w/o bayonet carrier, solder        |
| 7200108 |     |                                                                                     | 5x20        |                                        |                 | Fuse carrier bayonet for 5x20                              |
| 7200109 | 643 |  | 6.3x32      |                                        |                 | Fuse carrier bayonet for 6.3x32                            |

## Technical Notes

### 1 Introduction

Miniature fuses are automatic switchgears that protect electrical plants, appliances and modules from inadmissibly high current loads. They have various applications. Miniature fuses are used in consumer electronics for safeguarding power supplies and power output amplifiers. They are often used in industrial applications as primary fuses, where in the event of a fault they separate the defective module from the voltage supply in order to forestall any greater damage. Fuse-links for direct mounting on printed circuit boards are used among other things for the secondary current supply in low power devices. In the event of a fault they serve to protect components and PCB traces that might be destroyed by excessive current loads.

### 2 Designs

The traditional miniature fuse is cylindrical in shape, with a diameter of 5mm and a length of 20mm. There is also a design used internationally which has the dimensions 6.3 x 32mm. Depending on their rating, these fuses, whose characteristic might be very quick acting to long time-lag, can switch off short circuit currents of up to several kiloamperes at mains voltages of up to 1 000 V.

Sub-miniature fuses (KS) are used for through hole assembly on printed circuit boards. Whether their characteristic is quick acting or time-lag, these fuses with a rated voltage of 250 V are used in primary circuits for protecting mains transformers and in secondary circuits for selective protection of the modules.

SMD fuses at rated voltages of up to 250 V are available for surface mounting on printed circuit boards. Their applications are similar to those of the sub-miniature fuses (KS) described above. As regards their breaking performance, they are also designed with the special requirements of the telecom industry in mind.

### 3 Terminology

Miniature fuses consist of the fuse-link and the fuse holder. The fuse link contains the fuse-element and must, after the latter has melted, be replaced by a new fuse-link. The fuse-element can continuously carry the rated current under given conditions. When the rated current has been exceeded, the fuse-element melts above a value prescribed by the standards, and the electrical circuit is broken. The duration of the melting process is prescribed in the relevant standards.

The fuse-link is inserted into a fuse-holder. The latter consists of the fuse base (mount) and the (screw or bayonet) fuse carrier. The fuse base is firmly mounted in the device to be protected and provides the electrical connection. The fuse carrier receives the fuse link, allowing easy replacement. Open fuse holders and clips are often used besides such 'enclosed' fuse holders.

#### 3.1 Rated voltage (nominal voltage) $U_{rat}$

The rated voltage of a fuse link is given as the r.m.s. value of a sinusoidal alternating voltage at 50 Hz. All the test conditions are laid down in accordance with it. The voltage  $U_b$  driving the short circuit current must not be greater than the rated voltage.

$$U_{rat} \geq U_b$$

Operation at direct voltage is possible if the rated voltage is reduced; we will be glad to advise you on this matter if you provide us with the maximum fault current and the time constants of the fault current circuit.

#### 3.2 Rated Current $I_{rat}$

The rated current given is the r.m.s. value. Under prescribed conditions, the fuse-link can operate permanently at the rated current level. Ambient conditions, cyclic currents and special assembly conditions can lead to a de-rating of the rated current. The  $I_b$  operating current must not be greater than the rated current during normal operation.

$$I_{rat} \geq I_b$$

#### 3.3 Rated Breaking Capacity $I_1$ at $U_{rat}$

The rated breaking capacity characterizes the maximum current  $I_1$  that the fuse-link can properly switch off at the rated voltage. In certain applications it may be necessary to reduce the expected short-circuit current by means of additional impedances in the electrical circuit.

$$I_1 \geq I_p$$

### 3.4 Voltage Drop $\Delta U$

The voltage drop is determined with the fuse-link in operation at its rated current and at an ambient temperature of 23 °C.

### 3.5 Pre-arcing integral $I^2t_s$

The pre-arcing integral is calculated by integrating the square of the current over the pre-arcing time. The value indicates the electrical load that leads to the melting of the fuse-element. The value for the pre-arcing integral is determined at a test current of 10 I<sub>ra</sub> and is as a typical value.

### 3.6 Operating integral $I^2t_a$

The operating integral is calculated by integrating the square of the current over the total operating time of the fuse link. The value is a measure of the load on the downstream components during breaking operation of the fuse link in the event of a short circuit.

### 3.7 Power dissipation $P_v$

The Power dissipation of a fuse link is calculated by multiplying the conventional nonfusing current I<sub>nf</sub> by the voltage drop  $\Delta U$  determined at this load after an hour.

## 4 Structure of miniature Fuse-Links

### 4.1 The glass tube

If the maximum expected short circuit current (prospective current I<sub>p</sub>) is not greater than 35 A or max. 10 I<sub>rat</sub>, then a miniature fuse link with an unfilled glass tube is used. This fuse-link has the advantage of a relatively low voltage drop.

### 4.2 The reinforced glass tube

Miniature fuse-links with reinforced unfilled glass tubes can switch off prospective currents of up to 150 A at the rated voltage.

### 4.3 The filled glass tube

Prospective currents of up to 1 000 A can be switched off at the rated voltage by a combination of quartz sand filling as extinguish filler and reinforcement of the glass tube.

### 4.4 The filled ceramic tube

A further increase in the rated breaking capacity up to a prospective current of several kA is achieved by the use of ceramic tube filled with quartz sand.

### 4.5 The terminal caps

A copper alloy is usually used as working material for the terminal caps. The caps are plated by means of a special surface treatment to provide better electrical and thermal contact, as well as for protection against corrosion.

## 5 Characteristics

The characteristic is an expression for the time-current performance of the fuse-links.

|     |                   |                                                                                                                                                   |
|-----|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| FF  | Very quick acting | Short circuit protection for semiconductor components ( diodes, thyristors, triacs, transistors, MCT, etc.)                                       |
| gRL | Very quick acting | Full range protection of semiconductors and their supply lines                                                                                    |
| gPV |                   | For protection of photovoltaic systems                                                                                                            |
| F   | Quick acting      | Protection against high overload and short circuit currents, fuses are used in electrical circuit without inrush current pulse, or as mains fuses |
| M   | Medium time lag   | Used primarily at low operating voltages, if no high inrush currents have to be taken into account.                                               |
| T   | Time lag          | For high inrush currents have slow decaying transients(e.g. transformers).                                                                        |
| TT  | Long time lag     | For very high and long lasting inrush currents(e.g. motors)                                                                                       |

## 6 Standards

Besides several specific national standards, the principal standard applied worldwide is IEC 60127. It is divided into one general part, parts dealing with the individual fuse designs, one part for fuse holders, one specification for quality confirmation as well as one user's manual. The German-language equivalent of this International Standard is VDE 0820.

In the North American countries, the reference standard for miniature fuses is UL 248. Special care is required in converting the rated currents of IEC 60127 into those according to UL 248 (see figure 1).

## 7 Applications

### 7.1 Different definitions of the Rated Currents in the International Standards

In principle, two different ratings of the continuous current must be taken into account, preventing direct conversion of the fuse links according to IEC 60127 and UL 248-14.

- a) Continuous current rating according to IEC 60127

$$I_{rat} \geq I_b$$

- b) Continuous current rating according to UL 248-14

$$I_{rat} \geq I_b / 0,7$$

Figure 1

Figure 1 enables approximate conversion of rated current between UL and IEC standards

### 7.2 Operation at extra-Low-Voltage $U_b \ll U_{rat}$

Fuse-links can operate without difficulty at voltages below their rated voltage. The voltage drop of the fuse-links (internal resistance) must be taken into consideration, particularly at very low rated currents.

### 7.3 Operation at raised ambient temperatures

The shift in the rated current at various ambient temperatures can be determined with reference to Figure 2.

Figure 2

### 7.4 Pulse loads

If pulse loads arise in an electrical circuit to be protected, then that must be taken into consideration when assigning a fuse link, particularly the latter's pre-arcing integral  $I^2t_s$ . Reduction factors can be provided on the basis of extensive series of in house tests relating to pulse amplitude, pulse duration and frequency of occurrence.

### 7.5 Protection of semiconductor components

When protecting power electronics components, the  $I^2t$  value of the fuse-link is adjusted to the energy pulse (or  $I^2t$  value) of the component to be protected.

### 7.6 Power acceptance of the miniature Fuse Holder

The maximum power acceptance of the fuse holder must not be exceeded by the Power dissipation of the fuse link selected. Contact resistances and assembly conditions shall additionally be taken into account here.

## 8 Safety through Quality

In order to ensure compliance with the quality requirements, SIBA practices the documented quality management system (QM system) on the basis of the International Standard DIN EN ISO 9001. The environmental management system according to DIN EN ISO 14001 regulates the planning, implementation and supervision of environmental protection in the company.
