■ Embedded Power for
Business-Critical Continuity

DS2900

2900 Watts

Distributed Power System

Total Power: 2900 Watts
Input Voltage: 180-264 Vac
of Outputs: Main + standby

Special Features

- Active power factor correction
- EN61000-3-2 harmonic compliance
- Active AC inrush control
- 2U X 3U form factor
- 24.8 W / in³
- +12 Vdc Output
- +3.3 Vdc stand-by
(5 V standby - consult factory)
- No minimum load required
- Hot plug operation
- N + 1 redundant
- Internal OR'ing fets
- Active current sharing
(10 - 100% load)
- I²C communication interface bus
- PMBus compliant
- EERPOM for FRU data
- 2 LED (Green and Amber)
- Internal fan speed control
- INTEL, SSI Std. logic timing
- INTEL, SSI Std. FRU data format
- Full digital control
- Two year warranty

Product Descriptions

The DS2900 power supply features a very wide 180V to 264 Vac input voltage range and employ active power factor correction to minimize input harmonic current distortion and to ensure compliance with the international EN61000-3-2 standard – they have a power factor of 0.99 typical. The power supplies also feature active ac inrush control, to automatically limit inrush current at turn-on to 50 A maximum, and is protected against overvoltage conditions up to 130 percent.

The power supply employs a new patent-pending ultra high efficiency conversion topology, together with an innovative power transformer and rectifier construction that further improves power density and reduces interconnect power losses. The power supply's main +12 Vdc payload output is digitally programmable over the range 11.52 to 12.48Vdc, and users have a choice of standard I²C or advanced PMBus communications. The control software runs under Windows® on any standard PC, and uses a highly intuitive graphical user interface to simplify power supply set-up.

The DS2900 can deliver up to 240 A from its main +12 Vdc payload output, and up to 3A from its +3.3 Vdc auxiliary output. The supply has a 2U x 3U form factor and has a power density of more than 24.8 watts per cubic inch. The DS2900 can achieve a very high – 91 percent typical – conversion efficiency at 50 percent load.

Model Numbers

Standard	Output Voltage	Minimum Load	Maximum Load	Stand-By Supply	Air Flow Direction
DS2900-3	12.0Vdc	0A	240A	3.3V@3A	Normal (DC Connector to Handle)
DS2900-3-002	12.0Vdc	0A	240A	5.0V@2A	Normal (DC Connector to Handle)
DS2900-3-003	12.0Vdc	0A	240A	5.0V@2A	Reversed (Handle to DC Connector)
DS2900-3-004	12.0Vdc	0A	240A	3.3V@3A	Reversed (Handle to DC Connector)

Absolute Maximum Ratings

Stress in excess of those listed in the "Absolute Maximum Ratings" may cause permanent damage to the power supply. These are stress ratings only and functional operation of the unit is not implied at these or any other conditions above those given in the operational sections of this TRN. Exposure to any absolute maximum rated condition for extended periods may adversely affect the power supply's reliability.

Table 1. Absolute Maximum Ratings:

Parameter	Model	Symbol	Min	Typ	Max	Unit
Input Voltage: AC continuous operation	All models	$V_{IN,AC}$	180	-	264	Vac

Protection Function Specification

Rev.04.10.12_#1.0
DS2900-3 Series
Page 10

Input Fusing

DS2900-3 series is equipped with an internal non user serviceable 25A High Rupturing Capacity (HRC) 250 Vac fuse to IEC 127 for fault protection in Live line of AC input.

Over Voltage Protection / Under Voltage Protection (OVP/UVP)

The power supplies over voltage protection will be locally sensed. The power supply will shutdown in a latch off mode after an over voltage condition or under voltage condition. This latch can be cleared by an AC power interruption. The values are measured at the output of the power supply DC connector.

OVP

Parameter	Min	Nom	Max	Unit
V_O Output Overvoltage	13.2	/	15.6	V
Standby Output Overvoltage 3.3V 5.0V	3.63 5.5	/	4.29 6.5	V V

UVP

Parameter	Min	Nom	Max	Unit
V_O Output Undervoltage	9	/	10	V

Over Current / Short circuit protection (OCP/SCP)

DS2900-3 series includes internal current limit circuitry to prevent damage in the event of overload or short circuit. The current limiting shall be of the latch type for the +12VDC and the hiccup type for the 3.30v_{sb} output.

OCP

Parameter	Min	Nom	Max	Unit
V_O Output Overcurrent	252	/	276	A
Standby Output Overcurrent 3.3V 5.0V	3.45 2.3	/	4.2 2.8	A A

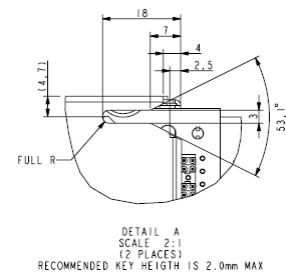

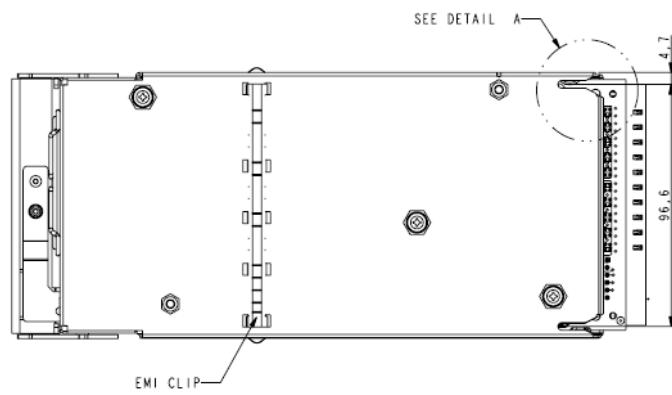

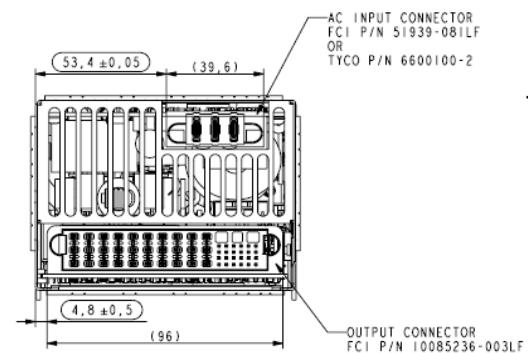

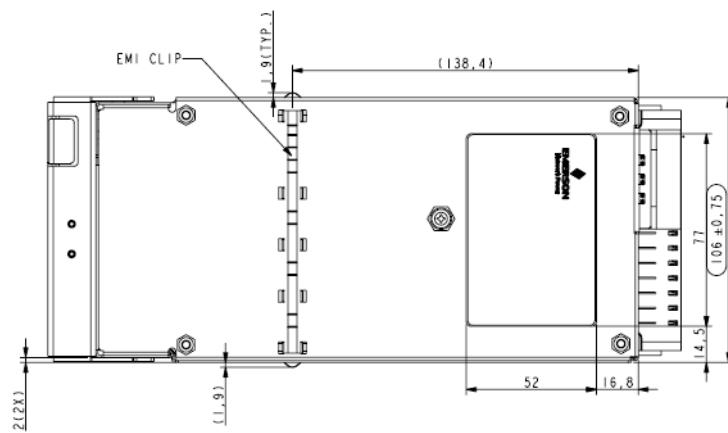

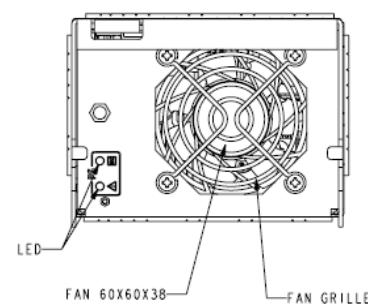

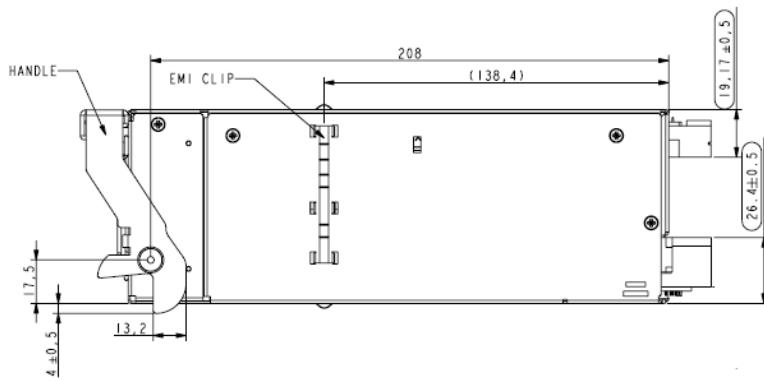

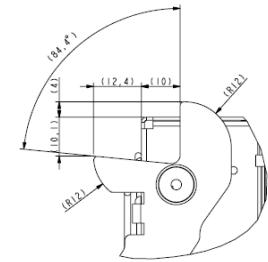

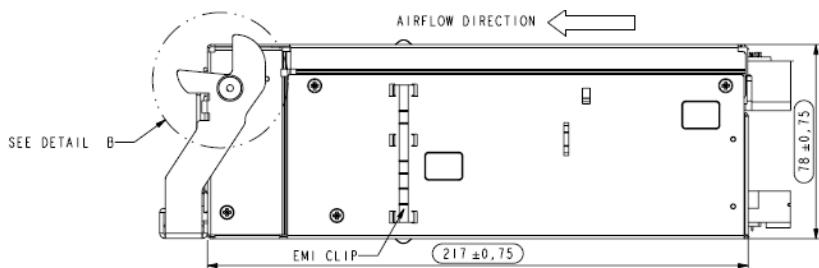

Over Temperature Protection (OTP)

The power supply is internally protected against over temperature conditions. In an OTP condition, the power supply will be shutdown with the exception of the 3.30V_{sb} output. When the power supply temperature drops to within specified limits, the power supply will restore the +12VDC output automatically. The OTP circuit must have built in Hysteresis such that the power supply will not oscillate on and off due to temperature recovering condition. Input ambient OTP should be 5degC above operating limit. The operating limit is OTP_reset. The power supply restarts 20sec after hitting OTP_reset.

LED indicator Definition

There will be a green POWER LED to indicate that AC is applied to the PSU and standby voltage is available when blinking. This same LED should go solid when the +12VDC output is enabled and operational.

There will be an Amber FAULT LED to indicate that the power supply has failed and a replacement of the unit is necessary. Faults including UVP, OVP, OTP, or Fan Fail when PSON# is asserted "Logic Low" shall cause the amber LED to turn on. The LED can be reset by toggling PSON# signal or an AC recycle.

Condition	FAULT LED Status
$V_{SB} = \text{ON}$, $V_O = \text{OFF}$, AC Input = ON	Blinking Green
$V_{SB} = \text{ON}$, $V_O = \text{ON}$	Solid Green
$V_O = \text{OCP} / \text{OVP}$	Solid Amber
FAN_FAULT / OTP / $V_{SB} = \text{OCP/UVP}$	Solid Amber

Weight

The DS2900-3 series weight is 5.29 lbs/ 2.4kg maximum.

Safety Certifications

Rev.04.10.12_#1.0
DS2900-3 Series
Page 17

The DS2900-3 power supply is intended for inclusion in other equipment and the installer must ensure that it is in compliance with all the requirements of the end application. This product is only for inclusion by professional installers within other equipment and must not be operated as a stand alone product.

Table 7. Safety Certifications for DS2900-3 series power supply system

Document	File #	Description
UL 60950 No.	E186249-A82-UL-1	US and Canada Requirements
CSA 22.2 No. 60950		Information Technology Equipment - Safety - Part 1: General Requirements (Bi-National standard, with UL 60950-1)
EN60950		European Requirements
EN60950 Deviations		International Requirements
CB Certificate and Report	DK-14590	(All CENELEC Countries)
CHINA CCC Approval	2009010907320502	China Requirements

EMI Emissions

The DS2900-3 series has been designed to comply with the Class A limits of EMI requirements of EN55022 (FCC Part 15) and CISPR 22 (EN55022) for emissions and relevant sections of EN61000 (IEC 61000) for immunity. The unit is enclosed inside a metal box, tested at 2900w using resistive load with cooling fan.

Conducted Emissions

Table 8. Conducted EMI emission specifications of the DS2900-3 series

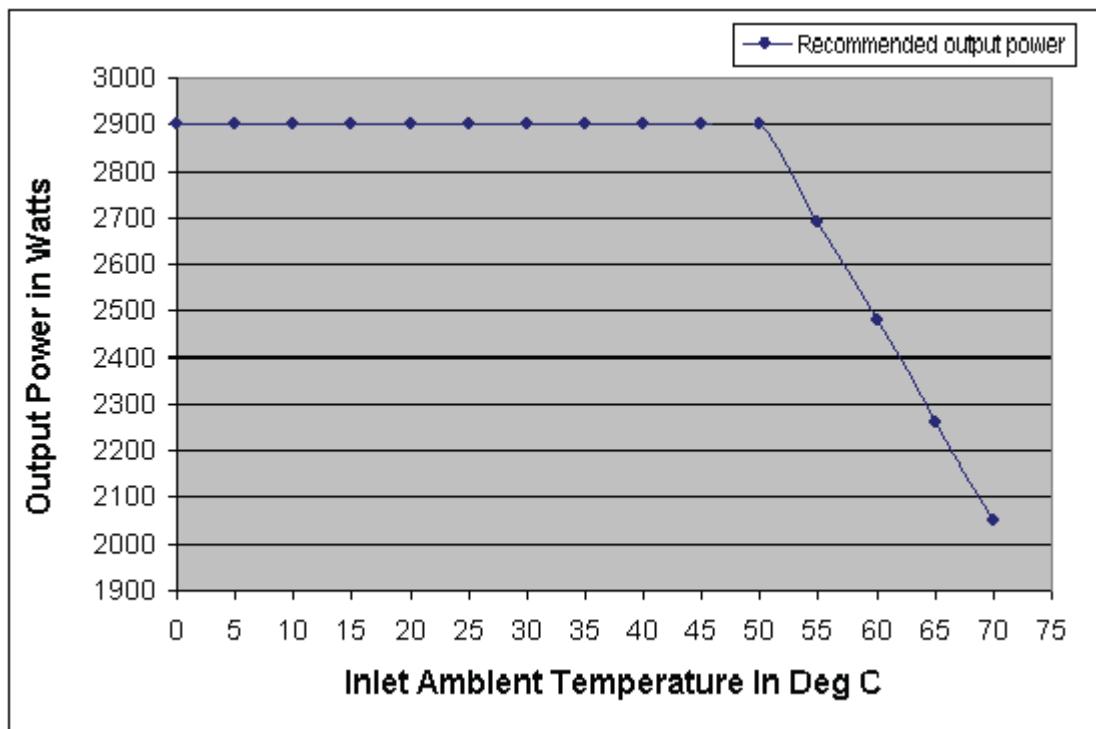

Parameter	Model	Symbol	Min	Typ	Max	Unit
FCC Part 15, class A	All	Margin	-	-	6	dB
CISPR 22 (EN55022) class A	All	Margin	-	-	6	dB

Radiated Emissions

Unlike conducted EMI, radiated EMI performance in a system environment may differ drastically from that in a stand-alone power supply. The shielding effect provided by the system enclosure may bring the EMI level from Class A to Class B. It is thus recommended that radiated EMI be evaluated in a system environment. The applicable standard is EN55022 Class A (FCC Part 15). Testing ac-dc convertors as a stand-alone component to the exact requirements of EN55022 can be difficult, because the standard calls for 1m leads to be attached to the input and outputs and aligned such as to maximize the disturbance. In such a set-up, it is possible to form a perfect dipole antenna that very few ac-dc convertors could pass. However, the standard also states that 'an attempt should be made to maximize the disturbance consistent with the typical application by varying the configuration of the test sample'.

Operating Temperature

The DS2900-3 series power supplies will start and operate within stated specifications at an ambient temperature from 0°C to 50°C under all load conditions with internal fan. It can operate up to 70°C with derated power.

Forced Air Cooling

The DS2900-3 series power supplies included internal cooling fans as part of the power supply assembly to provide forced air-cooling to maintain and control temperature of devices and ambient temperature in the power supply to appropriate levels. The standard direction of airflow is from the DC connector end to the AC connector end of the power supply. The PSU has a firmware program that determines the fan speed/airflow delivery based on % O/P load condition and ambient air temperature. Current fan firmware settings deliver 32.9 CFM for 50% Load at 50°C ambient, with the fan running at 13,050 RPM.

Storage and Shipping Temperature / Humidity

The DS2900-3 series power supplies can be stored or shipped at temperatures between -40°C to $+85^{\circ}\text{C}$ and relative humidity from 5% to 95% non-condensing.

Altitude

The DS2900-3 series will operate within specifications at altitudes up to 10,000 feet above sea level. The power supply shall not be damaged when stored at altitudes of up to 30,000 feet above sea level.

Humidity

The DS2900-3 series will operate within specifications when subjected to a relative humidity from 20% to 90% non-condensing. The DS2900-3 series can be stored in a relative humidity from 5% to 95% non-condensing.

Vibration

The DS2900-3 power supply will pass the following vibration specifications:

Non-Operating Random Vibration

Acceleration	2.7	gRMS	
Frequency Range	10-2000	Hz	
Duration	20	mins	
Direction	3 mutually perpendicular axis		
PSD Profile	FREQ 10-190 Hz 190-210 Hz 210-2000 Hz	SLOPE dB/oct --- -31.213dB/oct ---	PSD g²/Hz 0.01 g ² /Hz --- 0.003 g ² /Hz

Operating Random Vibration

Acceleration	1.0	gRMS	
Frequency Range	10-500	Hz	
Duration	20	mins	
Direction	3 mutually perpendicular axis		
PSD Profile	FREQ 10-500 Hz	SLOPE dB/oct ---	PSD g²/Hz 0.002 g ² /Hz

Shock

The DS2900-3 power supply will pass the following vibration specifications:

Non-Operating Half-Sine Shock

Acceleration	30	G
Duration	18	msec
Pulse	Half-Sine	
No. of Shock	3 shock on each of 6 faces	

Operating Half-Sine Shock

Acceleration	4	G
Duration	22	msec
Pulse	Half-Sine	
No. of Shock	3 shock on each of 6 faces	

Power and Control Signal Descriptions

AC Input Connector

This connector supplies the AC Mains to the DS2900-3 power supply.

- Pin 1 - AC Line
- Pin 2 - Earth Ground
- Pin 3 - AC Neutral

Output Connector – Power Blades

These pins provide the main output for the DS2900-3. The + Vout and the + Vout Return pins are the positive and negative rails, respectively, of the V_O main output of the DS1200-3 power supply. The + Vout is electrically isolated from the power supply chassis.

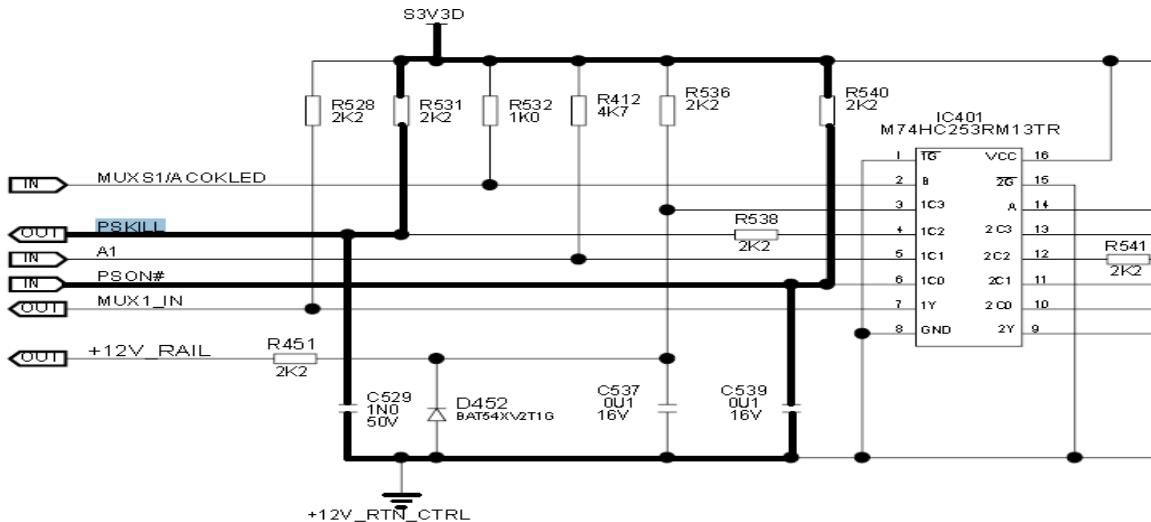

- PB1 - + Vout
- PB2 - + Vout
- PB3 - + Vout
- PB4 - + Vout
- PB5 - + Vout
- PB6 - + Vout Return
- PB7 - + Vout Return
- PB8 - + Vout Return
- PB9 - + Vout Return
- PB10 - + Vout Return

Output Connector - Control Signals

The DS2900-3 series contains a 24 pins control signal header providing an analogue control interface, standby power and i²C interface signal connections.

PS_KILL – (pin A1)

This signal pin should be grounded in the system. If left open, power supply operation will be inhibited (StandBy V_{SB} output will remain on).

+PS_ON – (pin A2)

This signal input pin controls the normal turning ON and Off of the Main Output of the DS2900-3 power supply.

The output will be enabled when this signal is pulled low, below 0.8 V outputs disabled when pin is driven high or left open.

+Vout_share – (pin A3)

The DS2900-3 supports active current sharing through a single wire connection between the power supplies. This input/output signal pin allows two or more power supplies to share the main output load current to increase the overall power capability or to operate the units in a N+1 configuration for redundancy purposes. Share Bus voltage at full load is 8.00vdc. Share Bus voltage at half load is 4.0vdc

+STBY*, +STBY* Return – (pins A5, A6, B5, B6, C5, C6, D5, D6)

The DS2900-3 provides a regulated 3.3 volt 3 amp (or 5.0 volt 2 amp) auxiliary output voltage to power critical circuitry that must remain active regardless of the on/off status of the power supply's main output. The Standby Output (VSB) voltage is available whenever a valid AC input voltage is applied to the unit. The StandBy Output is independently short circuit protected and is referenced to the StandBy Output Return pins (A6, B6, C6, D6).

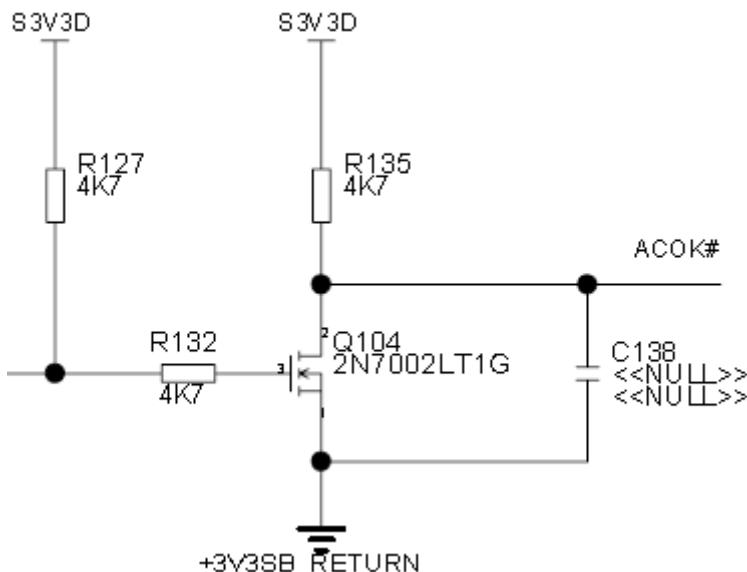

PS_SEATED – (pin B1)

This signal pin is connected to Main Output Return inside the power supply via a 220 ohm resistor. This pin is to be pull high on the system side by a resistor of 4.7K or higher. A TTL logic LOW indicates the power supply is inserted and seated into the system power supply connector. A Logic HIGH indicated the removal of the power supply.

The resistance from PS_SEATED pin to +12V_RTN, R < 250 ohms

ACOK – (pin B2)

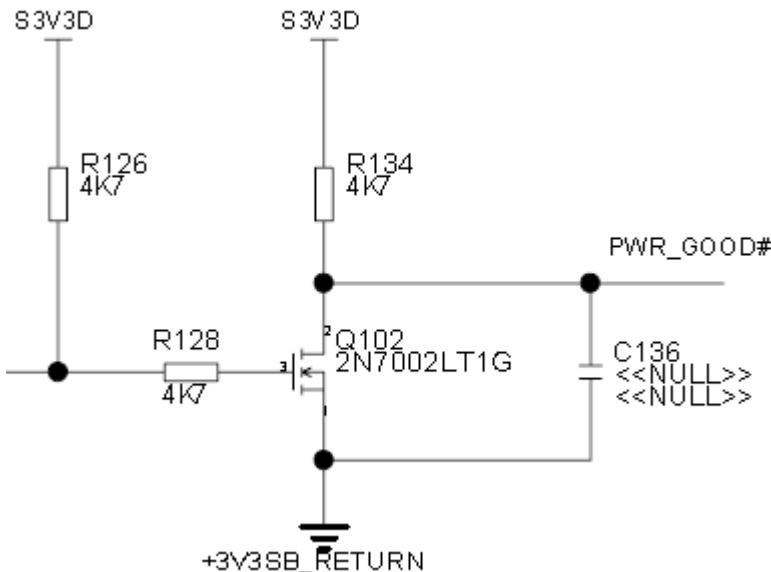

The ACOK signal is used to indicate presence of AC input to the power supply. This signal will be connected to 3.3Vsb through a resistor on the host system side. A logic "High" level on this signal shall indicate AC input to the power supply is present. A Logic "Low" on this signal will indicate a loss of AC input to the power supply.

Signal Type	Pull-up to 3.3Vsb through a resistor in the host system	
ACOK#=High	AC Present	
ACOK#=Low	AC Not Present	
	MIN	MAX
Logic level low voltage, Isink=4mA	0V	0.8V
Logic level high voltage, Isink=50uA	2.0V	4.125V
Sink current, ACOK# =Low		4mA
Sink current, ACOK# =high		50uA

PWR_GOOD – (pin B3)

PWR_GOOD is a power good signal and will be pulled HIGH by the power supply to indicate that both the outputs are above the regulation limits of the power supply. When any output voltage falls below regulation limits or when AC power has been removed for a time sufficiently long so that power supply operation is no longer guaranteed, PWOK will be de-asserted to a LOW state. The start of the PWR_GOOD delay time shall be inhibited as long as the +12VDC output is in current limit or the 3.30Vsb output is below the regulation limit.

PWR_GOOD Signal characteristics

Rev.04.10.12_#1.0
DS2900-3 Series

Signal Type	Open collector/drain output from power supply. Pull-up to 3.3v_{sb} internal to the power supply.	
PWR_GOOD =Low	Power Not Good	
PWR_GOOD =High	Power Good	
	MIN	MAX
Logic level low voltage, $I_{sink}=4mA$	0V	0.8V
Logic level high voltage, $I_{sink}=200\mu A$	2.0V	4.125V
Sink current, PWR_GOOD=Low		4mA
Sink current, PWR_GOOD=high		2mA
PWR_GOOD delay: T_{pwok_on}	100ms	1000ms
PWR_GOOD rise and fall time		100usec
Power down delay: $T_{pwrgood_off}$	1ms	1000msec

SDA, SCL and S_INT – (pin C1, C2, A4)

Please refer to “Communication Bus Descriptions” section.

A0, A1 and A2 – (pins C4, C3, B4)

Please refer to “Communication Bus Descriptions” section.

+Vout_RS, +Vout_RS_RETURN – (pins D3, D4)

Remote sense is required for the 12V and 3.30V_{sb} Output rail to compensate for 500mV load bus drop. Single remote sense connection is acceptable for 3.3V_{sb} output.

Communication Bus Descriptions

Rev.04.10.12_#1.0
DS2900-3 Series
Page 26

I²C Bus Signals

The DS2900-3 power supply contains enhanced monitor and control functions implemented via the I²C bus. The DS2900-3 I²C functionality (PMBusTM and FRU data) can be accessed via the output connector control signals. The communication bus is powered either by the internal 3.3V supply or from an external power source connected to the StandBy Output (ie: accessing an unpowered power supply as long as the StandBy Output of another power supply connected in parallel is on).

If units are connected in parallel or in redundant mode, the StandBy Outputs must be connected together in the system. Otherwise, the I²C bus will not work properly when a unit is inserted into the system without the AC source connected.

Note: PMBusTM functionality can be accessed only when the PSU is powered-up.
Guaranteed communication I²C speed is 100KHz.

SDA, SCL (I²C Data and Clock Signals) – (pin C1, C2)

I²C serial data and clock bus - these pins are internally pulled up to internal 3.3V supply with a 10K resistor.

S_INT (Alarm) – (pin A4)

S_INT is used to send a signal to the system that a fault in the power supply occurred. This signal is normally logic level HIGH. It will go to a LOW logic level when a fault bit has been set in the power supply's status register. To reset the S_INT signal back to normal (logic HIGH level) - (1) recycle input AC power, (2) toggle PSON signal and (3) issuance of a CLEAR_FAULTS PMBusTM command.

A0, A1 and A2 (I²C Address BIT 0, BIT1 and BIT2 Signals) – (pin C3, C4, B4)

These three input pins are the address lines A0 , A1 and A2 to indicate the slot position the power supply occupies in the power bay and define the power supply addresses for FRU data and PMBusTM data communication. This allows the system to assign different addresses for each power supply. During I²C communication between system and power supplies, the system will be the master and power supplies will be slave.

They are internally pulled up to internal 3.3V supply with a 4.7K resistor.

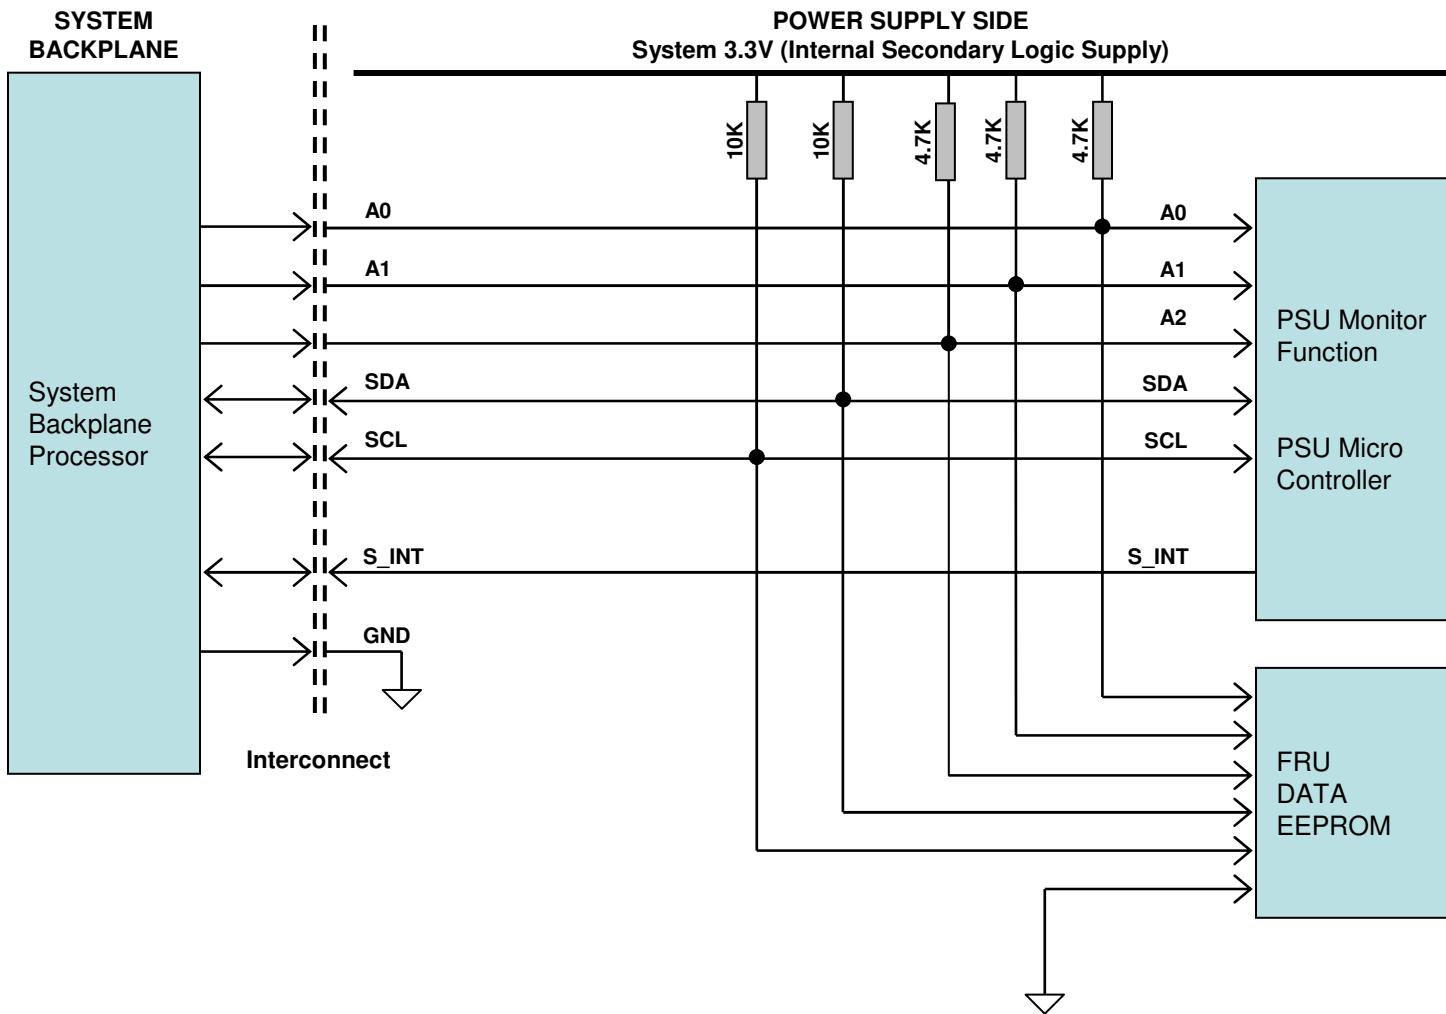

I²C Bus Communication Interval

The interval between two consecutive I²C communications to the power supply should be at least 50ms to ensure proper monitoring functionality.

I²C Bus Signal Integrity

The noise on the I²C bus (SDA, SCL lines) due to the power supply will be less than 500mV peak-to-peak. This noise measurement should be made with an oscilloscope bandwidth limited to 100MHz. Measurements should be made at the power supply output connector with 3.2K ohm resistors pulled up to StandBy Output and 20pf ceramic capacitors to StandBy Output Return.

The noise on the address lines A0 and A1 will be less than 100mV peak-to-peak. This noise measurement should be made at the power supply output connector.

I²C Bus - Recommended external pull-ups:

Electrical and Interface specifications of I²C signals (referenced to StandBy Output Return pin, unless otherwise indicated):

Parameter	Condition	Symbol	Min	Typ	Max	Unit
SDA, SCL internal pull-up resistor		R_{int}	-	10	-	Kohm
SDA, SCL internal bus capacitance		C_{int}	-	0	-	pF
Recommended external pull-up resistor 1 PSU	1 PSU	R_{ext}	-	1	-	Kohm
	8 PSU		-	0.125	-	Kohm

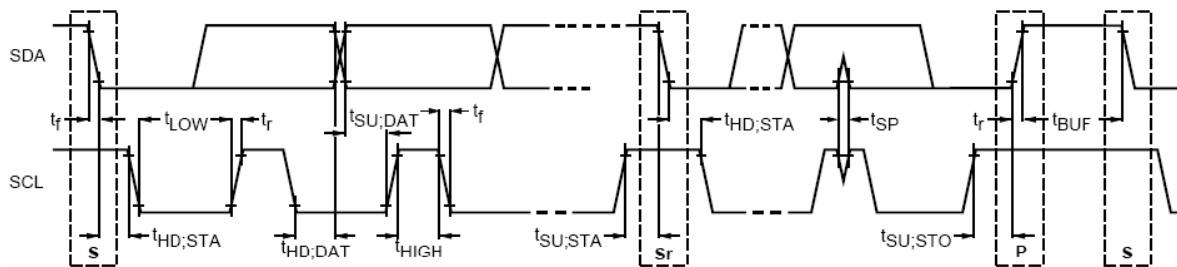

Logic Levels

DS2900-3 series power supply I2C Communication Bus will respond to logic levels as per below:

Logic High: 3.3V Nominal (Specs is 2.1V to 5.5V)**
Logic Low: 500mV nominal (Specs is 800mV max)**

** Note: Philips™ I2C adapter was used.

Timings

Parameter	Symbol	Standard-Mode Soecs		Actual		Unit
		Min	Max			
SCL Clock Frequency	f_{SCL}	0	100	86.92		kHz
Hold time (repeated) START condition	$t_{HD;STA}$	4.0	-	4.43		us
LOW period of SCL clock	t_{LOW}	4.7	-	15.24		us
HIGH period of SCL clock	t_{HIGH}	4.0	-	4.95		us
Setup time for repeated START condition	$t_{SU;STA}$	4.7	-	5.1		us
Data hold time	$t_{HD;DAT}$	0	3.45	0.146		us
Data setup time	$t_{SU;DAT}$	250	-	3560		ns
Rise time	t_r	-	1000	SCL = 764	SDA = 883	ns
Fall time	t_f	-	300	SCL = 129	SDA = 126	ns
Setup time for STOP condition	$t_{SU;STO}$	4.0	-	5.56		us
Bus free time between a STOP and START condition	t_{BUF}	4.7	-	31.04***		us

*** Note Philips™ I2C adapter and bundled software (USB-to-I2C) was used

Device Addressing

The DS2900 series will respond to supported commands on the I²C bus that are addressed according to pins A2, A1 and A0 pins.

PMBusTM address is B, [logic combination of A2, A1 and A0].

FRU address is A, [logic combination of A2, A1 and A0].

Address pins are held HIGH by default via pull-up to 5V_I²C. Connect these pins to GND to set it logic LOW.

As an example, if the address pins were left unconnected, A2, A1 and A0 are logic High. Thus, addressing is as follows:

PMBusTM - B, [A2, A1, A0, 0] therefore, if left unconnected, B, [1,1,1,0] = BE (default PMBus Address)

FRU - A, [A2, A1, A0, 0] therefore, if left unconnected, A, [1,1,1,0] = AE (default FRU Address)

Important: The least significant bit of the address byte is always 0.

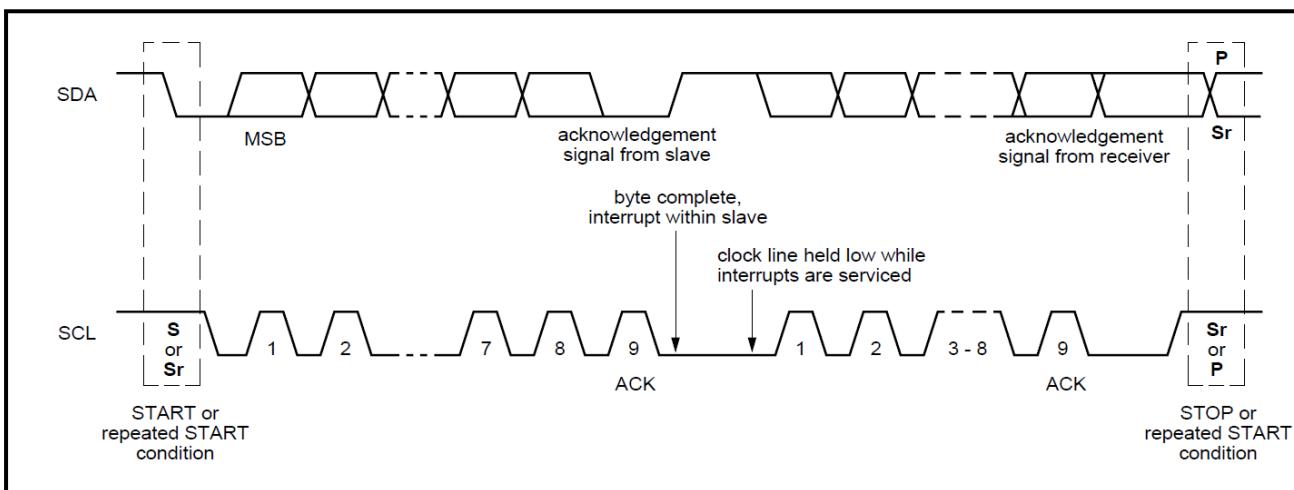

The I²C address of the device is based on the slot the PSU is in. The address is defined as follows:

Bus	PSU Slot	Slot ID Bits			PMBus TM Address	EEPROM (FRU) Address
		A2	A1	A0*		
I ² C _PSU1	1	0	0	0	B0	A0
I ² C _PSU2	2	0	0	1	B2	A2
I ² C _PSU3	3	0	1	0	B4	A4
I ² C _PSU4	4	0	1	1	B6	A6
I ² C _PSU5	5	1	0	0	B8	A8
I ² C _PSU6	6	1	0	1	BA	AA
I ² C _PSU7	7	1	1	0	BC	AC
I ² C _PSU8	8	1	1	1	BE	AE

I²C Clock Synchronization

The DS2900-3 power supply might apply clock stretching. An addressed slave power supply may hold the clock line (SCL) low after receiving (or sending) a byte, indicating that it is not yet ready to process more data. The system master that is communicating with the power supply will attempt to raise the clock to transfer the next bit, but must verify that the clock line was actually raised. If the power supply is clock stretching, the clock line will still be low (because the connections are open-drain).

The maximum time out condition for clock stretching for DS2900-3 is 100 microseconds.

FRU (EEPROM) Data

The FRU (Field Replaceable Unit) data format is compliant with the Intel IPMI v1.0 specification.

The DS2900-3 uses 1 page of EEPROM for FRU purpose. A page of EEPROM contains up to 256 byte-sized data locations.

Where: **OFFSET** - The OFFSET denotes the address in decimal format of a particular data byte within DS2900-3 EEPROM.
VALUE - The VALUE details data written to a particular memory location of the EEPROM.
DEFINITION - The contents DEFINITION refers to the definition of a particular data byte.

DS2900-3 FRU (EEPROM) Data:

The DS2900-3 is compliant with the industry standard PMBus™ protocol for monitoring and control of the power supply via the I²C interface port.

DS2900-3 Series PMBus™ General Instructions

Equipment Setup

The following is typical I²C communication setup:

PMBus™ Writing Instructions

When writing to any PMBus™ R/W registers, ALWAYS do the following:

Disable Write Protect (command 10h) by writing any of the following accordingly:

Levels: 00h – Enable writing to all writeable commands

20h – Disables write except 10h, 01h, 00h, 02h and 21h commands

40h – Disables write except 10h, 01h, and 00h commands

80h – Disable write except 0x10h

To save changes on the USER PMBus™ Table:

Use send byte command: 15h STORE_USER_ALL

To save changes on the DEFAULT PMBus™ Table:

Use send byte command: 11h STORE_DEFAULT_ALL

Wait for 5 seconds, turn-off the PSU, wait for another 5 seconds before turning it on.

DS2900-3 Series Support PMBus™ Command List

Rev.04.10.12_#1.0
DS2900-3 Series
Page 43

The DS2900-3 is compliant with the industry standard PMBus™ protocol for monitoring and control of the power supply via the i²C interface port.

DS2900-3 Series Supported PMBus™ Command List:

Command Code	Command Name	Default Value	Access Type	Data Bytes	Data Format	Description
01h	OPERATION	88	R/W	1		Used to Turn the unit ON/OFF in conjunction with the input CONTROL pin. It is also used to set output to upper or lower Margin Voltages.
	b7:6	10				00 – Immediate Turn OFF (No Sequencing) 01 – Soft Turn OFF (With Sequencing) 10 – PSU ON
	b5:4	00				01 – Margin Low 10 – Margin High 00 – No Margin
	b3:2	10				01 – Ignore Fault 10 – Act On Fault
	b1:0	00				Reserved
02h	ON_OFF_CONFIG	14	R/W	1		Configures the combination of CONTROL pin and serial communication commands needed to turn the Unit ON/OFF.
	b7:5	000				Reserved
	b4 – Enable CONTROL pin and Serial communication control.	1				0 – Unit powers up any time power is present regardless of the state of CONTROL pin. 1 – Unit powers up as dictated by CONTROL pin and OPERATION command (b3:0)
	b3 – Serial communication Control	0				0 – Unit Ignores ON/OFF portion of the OPERATION command. 1 – Enables Serial communication ON/OFF portion of OPERATION command. Requires CONTROL pin to be asserted for the unit to start and energize the output.
	b2 – Sets how the unit responds to CONTROL pin	1				0 – Unit ignores CONTROL pin. (ON/OFF controlled by OPERATION command). 1 – Unit requires CONTROL pin to be asserted to start the unit.
	b1 - CONTROL pin polarity	0				0 – Unit ignores CONTROL pin. (ON/OFF controlled by OPERATION command). 1 – Unit requires CONTROL pin to be asserted to start the unit.
	b0 – CONTROL pin Action	0				0 – Use programmed turn ON/OFF delay 1 – Turn OFF the output and stop transferring energy to the output as fast as possible.
03h	CLEAR_FAULTS	0	S			
10h	WRITE_PROTECT	80	R/W	1		Used to Control Writing to the PMBus Device 80h - Disables write except 10h 40h - Disables write except 10h, 01h, 00h 20h - Disables write except 10h,01h,00h,02h and 21h commands 00 - Enables write to all writeable commands.
11h	STORE_DEFAULT_ALL	-	S	0		Copies the Value of the Operating memory table to the matching DEFAULT non-volatile memory.
12h	RESTORE_DEFAULT_ALL	-	S	0		Copies the entire contents of the DEFAULT non-volatile memory to the Operating memory table.
15h	STORE_USER_ALL	-	S	0		Copies the Operating memory table to the matching USER non-volatile memory.

Command Code	Command Name	Default Value (HEX)	Access Type	Data Bytes	Data Format	
16h	RESTORE_USER_ALL	-	S	0		Copies the entire USER non-volatile memory to the Operating memory table.
19h	CAPABILITY	00	R	1		Provides a way for the hosts system to determine some key capabilities of a PMBus device.
	b7 - Packet Error Checking	0				0 - PEC not supported 1 - PEC supported
	b6 - Maximum Bus Speed	1				0 - Maximum supported bus speed, 100khz 1 - Maximum supported bus speed, 400khz
	b5 - SMBALERT#	0				0 - SMBus Alert Pin not supported 1 - SMBus Alert Pin supported
	b4:0	00000				Reserved
20h	VOUT_MODE	40	R	1		Specifies the mode and parameters of Output Voltage related Data Formats
21h	VOUT_COMMAND	21900	R/W	2	Linear	Sets the Output Voltage Reference Vout command sends discreet value to change or trim output voltage. The value acts as Digital reference of the Power supply after additional operations are performed (to make the representation compatible). Affects OVP_WARNING and FAULT LIMIT, as well as POWER_GOOD_ON/OFF level.
24h	VOUT_MAX	04D4	R	2	Direct	Sets the max adjustable output voltage limit.
29h	VOUT_SCALR_MONITOR	17955	R/W	2	Linear	Ratio of ADC value to the actual voltage. A discreet value, to scale the reading of output voltage, using Read_Vout command. Vout scale = Vout * 32768 / Vref Vout is the output voltage in mV 32768 is ADC max ADCread can be scaled using Vref value. i.e.. using Vref value as an example. Voutscale = 12050 * 32768 / 24824 Voutscale = 15906
30h	COEFFICIENTS		R/W	5		use to retrieve the m, b and R coefficients, needed for DIRECT data format
	byte 1:2	0100				m low Byte, m high byte
	byte 3:4	0000				b low Byte, b high byte
	byte 5	02				R byte
31h	POUT_MAX	12D5	R/W	2	Linear	Sets the operating power limit condition.
35h	VIN_ON	F2D0	R	2	Linear	Sets the value of input, in volts, at which the unit should start. ACGOOD 88Vac
36h	VIN_OFF	F2A8	R	2	Linear	Sets the value of input, in volts, at which the unit should stop power conversion. ACBAD
38h	IOUT_CAL_GAIN	25540	R	2		The ratio of voltage across the Current Sense to actual current.
39h	IOUT_CAL_OFFSET	0000	R/W	2		Used to null any offsets in the current sensing circuit. Normally used in conjunction with the IOUT_SCALE to minimize current sensing error.
3Ah	FAN_CONFIG_1_2	90	R/W	1		Used to configure up to 2 fans associated with one PMBus device
	b7	1				1 – Fan is installed in position 1 0 – No Fan is installed in position 1
	b6	0				1 – Fan is commanded in RPM 0 – Fan is commanded in DC

Command Code	Command Name	Default Value (HEX)	Access Type	Data Bytes	Data Format	
	b5:4	01				00 – 1 pulse per revolution 01 – 2 pulses per revolution 10 – 3 pulses per revolution 11 – 4 pulses per revolution
	b3	1				1 – Fan is commanded in RPM 0 – Fan is commanded in DC
	b2	0				1 – Fan is commanded in RPM 0 – Fan is commanded in DC
	b1:0	01				00 – 1 pulse per revolution 01 – 2 pulses per revolution 10 – 3 pulses per revolution 11 – 4 pulses per revolution
3Bh	FAN_COMMAND_1 (used by both Fan 1 and 2)	0000	R/W	2	Linear	Adjusts the operation of the Fans. The device may override the command, if it requires higher value, to maintain proper device temperature. RPM Control – Commands Speeds from 0-65535 RPM. Duty cycle Control – Commands Speeds from 0 to 100%
40h	VOUT_OV_FAULT_LIMIT	05A0	R/W	2	Direct	Sets Output Over voltage threshold.
41h	VOUT_OV_FAULT_RESPONSE	C0	R/W	1	-	Unit Latches OFF. Resets on PSON or CONTROL pin recycle or AC recycle.
42h	VOUT_OV_WARN_LIMIT	0504	R/W	2	Direct	Sets Over-voltage Warning threshold.
43h	VOUT_UV_WARN_LIMIT	03E8	R/W	2	Direct	Sets Under-voltage Warning threshold.
44h	VOUT_UV_FAULT_LIMIT	0190	R/W	2	Direct	Sets Under-voltage Fault threshold.
45h	VOUT_UV_FAULT_RESPONSE	C0	R/W	1	-	Turn PSU OFF
46h	IOUT_OC_FAULT_LIMIT	6720	R/W	2	Direct	Sets the Over current threshold in Amps.
47h	IOUT_OC_FAULT_RESPONSE	81	R/W	1	-	OCP ride through. If OCP persists.
48h	IOUT_OC_LV_FAULT_LIMIT	6720	R/W	2	Direct	Specifies low-level voltage limit during constant current OC condition.
49h	IOUT_OC_LV_FAULT_RES	00	R/W	1	-	Unit Latch OFF. Cleared on PSON or AC recycle.
4Ah	IOUT_OC_WARN_LIMIT	6720	R/W	2	Direct	Sets the Over Current Warning threshold in Amps.
4Fh	OT_FAULT_LIMIT	157C	R/W	2	Direct	Secondary ambient temperature Fault threshold, in degree C.
50h	OT_FAULT_RESPONSE	FF	R/W	1		Turn PSU OFF and retry once Over temp Fault is removed.
51h	OT_WARN_LIMIT	1388	R/W	2	Direct	Secondary ambient temperature warning threshold, in degree C. Operating limit. refer to section 3.1
55h	VIN_OV_FAULT_LIMIT	FA26	R	2	Linear	Sets input over-voltage threshold.
56h	VIN_OV_FAULT_RESPONSE	C0	R	1		Turn PSU OFF. Cleared upon AC recycle.
57h	VIN_OV_WARN_LIMIT	FA1C	R	2	Linear	Sets the threshold of input voltage that triggers high voltage warning.
5Bh	IIN_OC_FAULT_LIMIT	DA80	R	2	Linear	Sets the threshold for input current that causes over-current fault within 100ms.
5Ch	IIN_OC_FAULT_RESPONSE	C0	R	1		Turn PSU OFF. cleared upon AC recycle.
5Dh	IIN_OC_WARN_LIMIT	DA80	R	2	Linear	Input Over Current warning threshold.
5Eh	POWER_GOOD_ON	04AB	R	2	Direct	Sets the threshold by which the Power Good signal is asserted.
5Fh	POWER_GOOD_OFF	048C	R	2	Direct	Sets the threshold by which the Power Good signal is de-asserted.

DS2900-3 Series Supported PMBus™ Command List:

Rev.04.10.12_#1.0
DS2900-3 Series
Page 46

Command Code	Command Name	Default Value (HEX)	Access Type	Data Bytes	Data Format	
60h	TON_DELAY	0064	R/W	2	Direct	Sets the time (ms), from start condition (Power ON) until the output starts to rise. default value is 0ms.
61h	TON_RISE	1770	R/W	2	Direct	Sets the time (ms), for the output rises from 0 to regulation. default value is 0ms.
64h	TOFF_DELAY	0096	R/W	2	Direct	Sets the time (ms), from a stop condition (Power OFF) until the output starts to drop (converter OFF).(23ms)
78h	STATUS_BYTE	-	R	1		Returns the summary of critical faults
	b7 – BUSY	-				A fault was declared because the device was busy and unable to respond.
	b6 – OFF	-				Unit is OFF
	b5 – VOUT_OV	-				Output over-voltage fault has occurred
	b4 – IOUT_OC	-				Output over-current fault has occurred
	b3 - VIN_UV	-				An input under-voltage fault has occurred
	b2 - TEMPERATURE	-				A temperature fault or warning has occurred
	b1 – CML	-				A communication, memory or logic fault has occurred.
	b0 – NONE OF THE ABOVE	-				A Fault Warning not listed in bits[7:1] has occurred.
79h	STATUS_WORD	-	R	2		Summary of units Fault and warning status.
	b15 – VOUT					An output voltage fault or warning has occurred
	b14 – IOUT/POUT					An Output current or power fault or warning has occurred.
	b13 – INPUT					An input voltage, current or power fault or warning as occurred.
	b12 – MFR					A manufacturer specific fault or warning has occurred.
	b11 – POWER_GOOD#					The POWER_GOOD signal is de-asserted
	b10 - FANS					A fan or airflow fault or warning has occurred.
	b9 – OTHER					A bit in STATUS_OTHER is set.
	b8 – UNKNOWN					A fault type not given in bits [15:1] of the STATUS_WORD has been detected.
	b7 – BUSY					A fault was declared because the device was busy and unable to respond.
	b6 – OFF					Unit is OFF
	b5 – VOUT_OV					Output over-voltage fault has occurred
	b4 – IOUT_OC					Output over-current fault has occurred
	b3 - VIN_UV					An input under-voltage fault has occurred
	b2 - TEMPERATURE					A temperature fault or warning has occurred
	b1 – CML					A communication, memory or logic fault has occurred.
	b0 – NONE_OF_THE ABOVE					A fault or warning not listed in bits[7:1] of this byte has occurred.
7Ah	STATUS_VOUT	-	R	1		Output voltage related faults and warnings
	b7					VOUT Over-voltage Fault
	b6					VOUT Over-voltage warning
	b5					VOUT Under-voltage Warning
	b4					VOUT Under-voltage Fault

Command Code	Command Name	Default Value (HEX)	Access Type	Data Bytes	Data Format	
	b3					VOUT_MAX Warning, an attempt has been made to set output to a value higher than the highest permissible voltage.
	b2					
	b1					
	b0					reserved
7Bh	STATUS_IOUT		R	1		Output Current related faults and warnings
	b7					IOUT Over current Fault
	b6					IOUT Over current And Low Voltage shutdown Fault
	b5					IOUT Overcurrent Warning
	b4					IOUT Underrcurrent Fault
	b3					Current Share Fault, Set if Ishare level is much greater or lower than the actual output current. Refer to section 5.13 for Load sharing limits.
	b2					Power Limiting
	b1					
	b0					
7Ch	STATUS_INPUT	-	R	1		Input related faults and warnings
	b7					VIN Overvoltage Fault
	b6					VIN Overvoltage Warning
	b5					
	b4					
	b3					Unit is OFF for insufficient Input Voltage
	b2					IIN Overcurrent Fault
	b1					IIN Overcurrent Warning

A9h	MFR_TAMBIENT_MIN	0000	R	2	Direct	Minimum Operating Ambient Temperature (Secondary Ambient) (-10 degC)
D0h	Primary OTP	EB48	R	2	Direct	Primary Over Temperature Limit
D1h	STBY_UV	012C	R/W	2	Direct	Standby Under-voltage Level
D2h	Min Fan Speed	12DF	R/W	2	-	Standby Fan Speed, (13200 rpm / 20% Duty Cycle)
D3h	Max Fan Speed	2396	R/W	2	-	Normal operation Fan Speed (38400 rpm / 100% Duty Cycle)
D4h	MFR_STATUS WORD HISTORY	0000	R/W	2	-	Stores a copy of STATUS_WORD during the most recent fault.
E0h	READ_STBY	-	R	2	-	Read Standby Voltage
E3h	READ_PIN	-	R	2	-	Variable. Used by Factory to trim Ishare Voltage Slope. Default before tirmming, FF7F
E4h	READ_EFF	-	R	2	-	Read Efficiency

Current Sharing

The DS2900-3 series' main output V1 is equipped with current sharing capability. This will allow up to 4 power supplies to be connected in parallel for higher power application. Current share accuracy is typically 10% of full load. All current sharing functions are implemented internal to the power supply by making use of the 12V IShare signal. The system connects the 12V IShare lines between the power supplies.

Standby Load Sharing

Each 3.3Vsb/3.0A or 5V/2A standby output in the system will deliver current up to the current limit point. At this point the power supply will go into constant current mode and allow other power supplies in the system to deliver additional standby current (Droop method I sharing)

Redundancy / Fault Tolerance

Rev.04.10.12_#1.0
DS2900-3 Series
Page 51

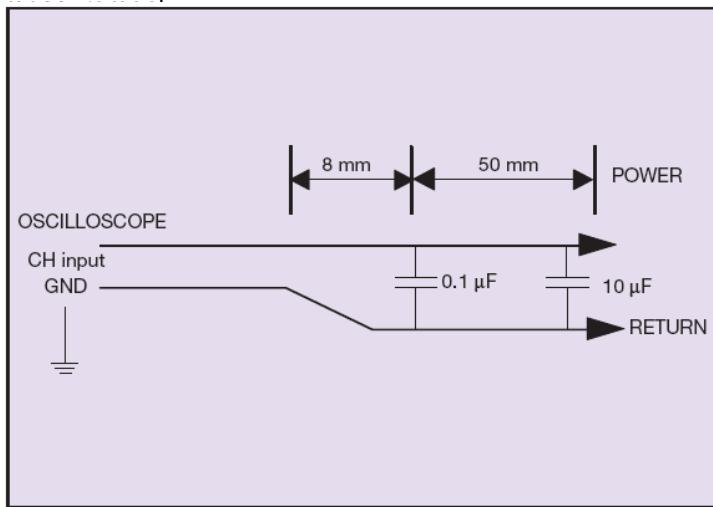

The DS2900-3 series power supplies will allow up to 8 power supplies to be connected in an N+1 redundant load. where n =1, 2, 3, 4...

Any failure of one power supply in parallel as well as hot swapping shall not cause more than a 4% change in main output. Current share accuracy is typically 3% of full load. The Failure of one or more supplies will not cause the remaining supplies to violate any of the input or output specifications noted in this specification including all status signals.

The latch of the DS2900-3 power supply is designed to prevent the latch from depressed if the AC cord is attached to the power supply. In order to remove the power supply from system chassis, the AC cord must be removed first so the power supply will always be in the powered off state during the removal from system chassis.

Output Ripple and Noise Measurement

The setup outlined in the diagram below has been used for output voltage ripple and noise measurements on the DS2900 Series. When measuring output ripple and noise, a scope jack in parallel with a 0.1 μ F ceramic chip capacitor, and a 10 μ F aluminum electrolytic capacitor should be used. Oscilloscope should be set to 20 MHz bandwidth for this
