- Note 1. Output capacitor C_1 (47 to 100 μ f) shall be connected directly to output terminal (Pin1) and GND terminal (Pin3) as shown above.
- Note 2. When wiring between the regulator and the load is long, another capacitor (47 to 100 μ f) shall be added in parallel with the load.
- Note 3. If there is a possibility of reverse biasing between input and output, a protection diode (D_1) is to be added. The recommended diode for D_1 is NTE116.
