

## DC Film Capacitors

### MKT Radial Potted Type

#### FEATURES

- 15 mm to 27.5 mm lead pitch.  
Supplied loose in box and taped on reel
- Material categorization:  
for definitions of compliance please see  
[www.vishay.com/doc?99912](http://www.vishay.com/doc?99912)

#### APPLICATIONS

Blocking and coupling, bypass and energy reservoir

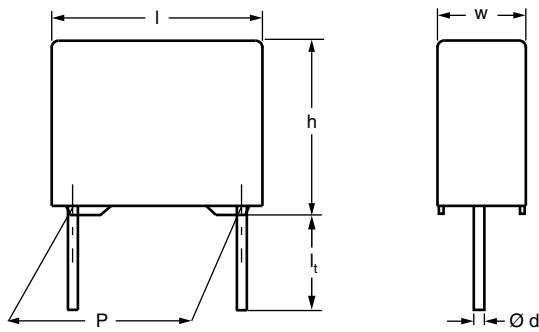

#### QUICK REFERENCE DATA

Capacitance tolerance	$\pm 10\%$ , $\pm 5\%$
Capacitance range (E12 series)	0.047 $\mu\text{F}$ to 15 $\mu\text{F}$
Rated DC voltage	100 V, 250 V, 400 V, 630 V
Rated AC voltage	63 V, 160 V, 220 V, 250 V
Climatic testing class (according to IEC 60068-1)	55/105/56
Rated temperature	85 °C
Maximum application temperature	105 °C
Performance grade	Grade 1 (long life)
Leads	Tinned wire
Reference standards	IEC 60384-2
Dielectric	Polyester film
Electrodes	Metallized
Construction	Mono construction 
Encapsulation	Flame retardant plastic case and epoxy resin (UL-class 94 V-0)
Marking	C-value; tolerance; rated voltage; manufacturer's symbol; year and week of manufacturer; manufacturer's type

#### Note

- For more detailed data and test requirements, contact [dc-film@vishay.com](mailto:dc-film@vishay.com)

#### DIMENSIONS

**COMPOSITION OF CATALOG NUMBER**

TYPE AND PITCHES		CAPACITANCE (numerically)		MULTIPLIER (nF)											
373	15.0 mm			0.1	2										
	22.5 mm			1	3										
	27.5 mm			10	4										
				100	5										
Example: 104 = 10 x 10 = 100 nF

## MOUNTING

### Normal Use

The capacitors are designed for mounting on printed-circuit boards. The capacitors packed in bandoliers are designed for mounting in printed-circuit boards by means of automatic insertion machines.

For detailed tape specifications refer to packaging information: [www.vishay.com/doc?28139](http://www.vishay.com/doc?28139)

### Specific Method of Mounting to Withstand Vibration and Shock

In order to withstand vibration and shock tests, it must be ensured that stand-off pips are in good contact with the printed-circuit board:

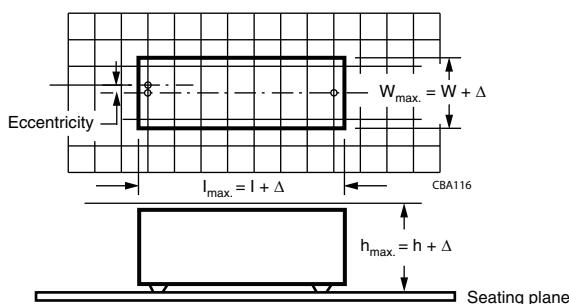

- For pitches  $\leq 15$  mm capacitors shall be mechanically fixed by the leads
- For larger pitches the capacitors shall be mounted in the same way and the body clamped

### Space Requirements On Printed-Circuit Board

The maximum space for length ( $l_{max.}$ ), width ( $w_{max.}$ ) and height ( $h_{max.}$ ) of film capacitors to take in account on the printed-circuit board is shown in the drawing:

- For products with pitch  $\leq 15$  mm,  $\Delta w = \Delta l = 0.3$  mm and  $\Delta h = 0.1$  mm
- For products with  $15$  mm  $<$  pitch  $\leq 27.5$  mm,  $\Delta w = \Delta l = 0.5$  mm and  $\Delta h = 0.1$  mm

Eccentricity defined as in drawing. The maximum eccentricity is smaller than or equal to the lead diameter of the product concerned.

## SOLDERING

For general soldering conditions and wave soldering profile, we refer to the application note:  
**“Soldering Guidelines for Film Capacitors”**: [www.vishay.com/doc?28171](http://www.vishay.com/doc?28171)

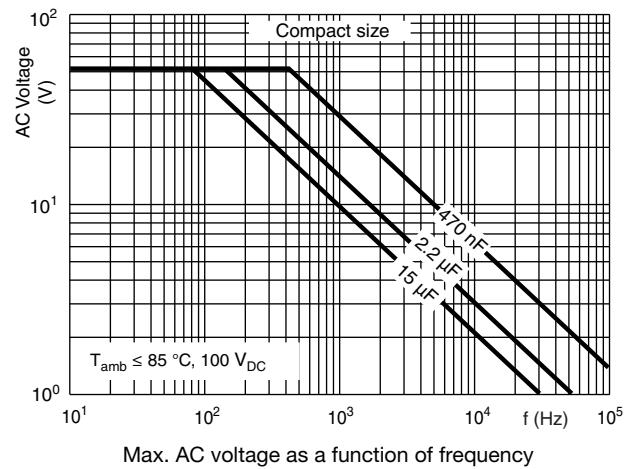

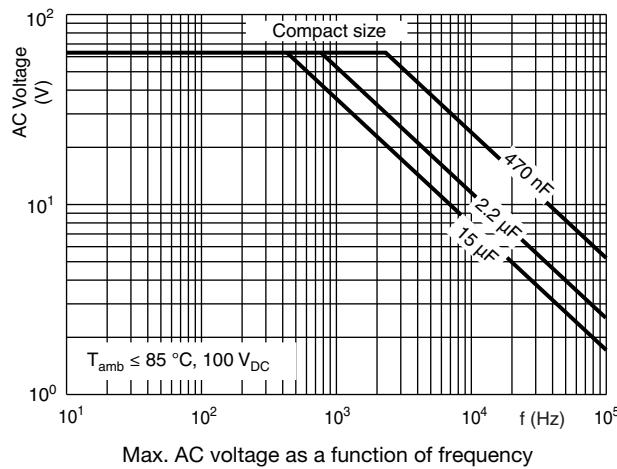

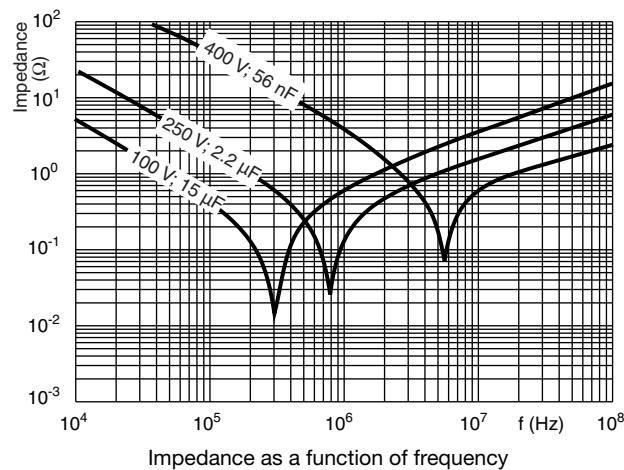

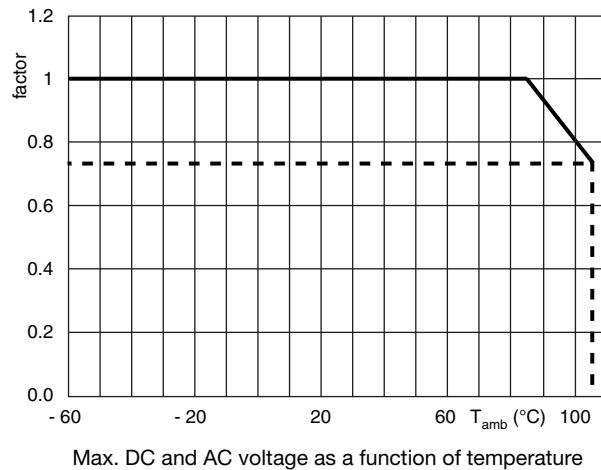

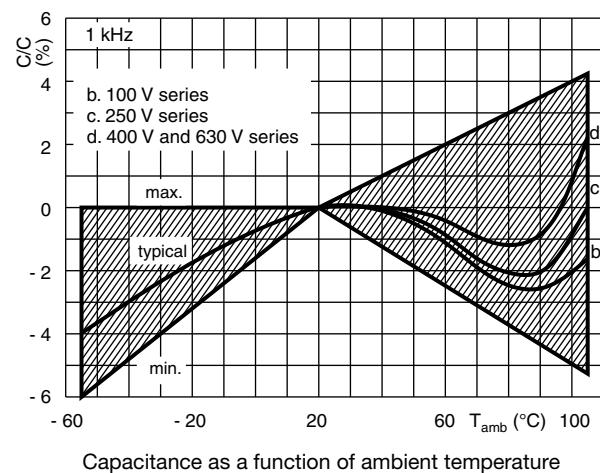

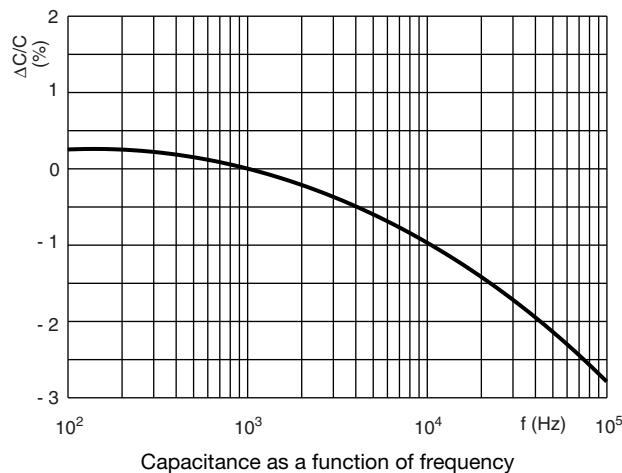

### Storage Temperature

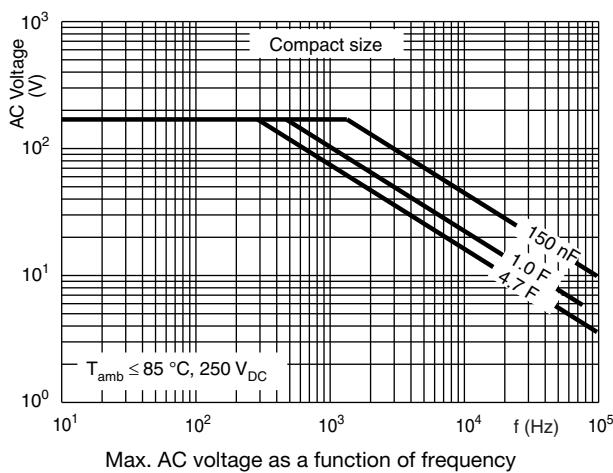

$T_{stg} = -25$  °C to  $+35$  °C with RH maximum 75 % without condensation

### Ratings and Characteristics Reference Conditions

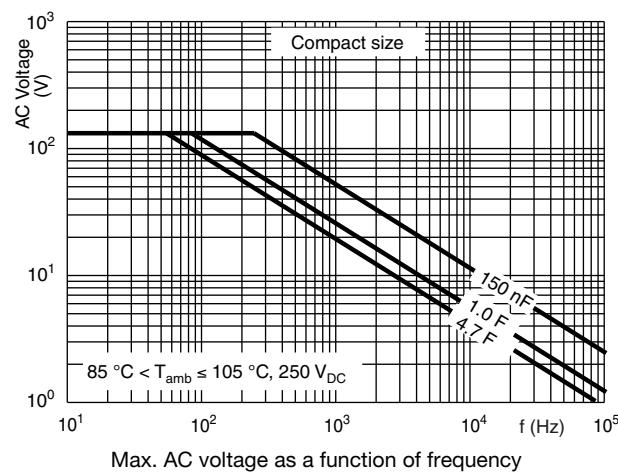

Unless otherwise specified, all electrical values apply to an ambient free air temperature of  $23$  °C  $\pm 1$  °C, an atmospheric pressure of 86 kPa to 106 kPa and a relative humidity of 50 %  $\pm 2$  %.

For reference testing, a conditioning period shall be applied over  $96$  h  $\pm 4$  h by heating the products in a circulating air oven at the rated temperature and a relative humidity not exceeding 20 %.

18.0	-	-	57

## POWER DISSIPATION AND MAXIMUM COMPONENT TEMPERATURE RISE

The power dissipation must be limited in order not to exceed the maximum allowed component temperature rise as a function of the free ambient temperature.

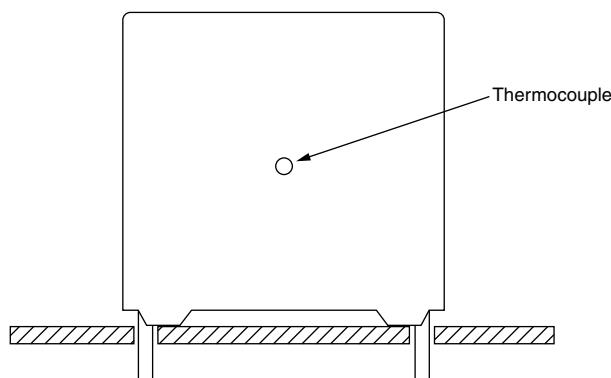

The power dissipation can be calculated according type detail specification "HQN-384-01/101: Technical Information Film Capacitors", [www.vishay.com/doc?28147](http://www.vishay.com/doc?28147).

The component temperature rise ( $\Delta T$ ) can be measured (see section "Measuring the component temperature" for more details) or calculated by  $\Delta T = P/G$ :

- $\Delta T$  = component temperature rise ( $^{\circ}\text{C}$ )
- $P$  = power dissipation of the component (mW)
- $G$  = heat conductivity of the component (mW/ $^{\circ}\text{C}$ )

## MEASURING THE COMPONENT TEMPERATURE

A thermocouple must be attached to the capacitor body as in:

The temperature is measured in unloaded ( $T_{\text{amb}}$ ) and maximum loaded condition ( $T_C$ ).

The temperature rise is given by  $\Delta T = T_C - T_{\text{amb}}$ .

To avoid radiation or convection, the capacitor should be tested in a wind-free box.

## APPLICATION NOTE AND LIMITING CONDITIONS

These capacitors are not suitable for mains applications as across-the-line capacitors without additional protection, as described hereunder. These mains applications are strictly regulated in safety standards and therefore electromagnetic interference suppression capacitors conforming the standards must be used.

For capacitors connected in parallel, normally the proof voltage and possibly the rated voltage must be reduced. For information depending of the capacitance value and the number of parallel connections contact: [dc-film@vishay.com](mailto:dc-film@vishay.com)

To select the capacitor for a certain application, the following conditions must be checked:

1. The peak voltage ( $U_P$ ) shall not be greater than the rated DC voltage ( $U_{\text{RDC}}$ )
2. The peak-to-peak voltage ( $U_{P-P}$ ) shall not be greater than  $2\sqrt{2} \times U_{\text{RAC}}$  to avoid the ionization inception level
3. The voltage peak slope ( $dU/dt$ ) shall not exceed the rated voltage pulse slope in an RC-circuit at rated voltage and without ringing. If the pulse voltage is lower than the rated DC voltage, the rated voltage pulse slope may be multiplied by  $U_{\text{RDC}}$  and divided by the applied voltage.

For all other pulses following equation must be fulfilled:

$$2 \times \int_0^T \left( \frac{dU}{dt} \right)^2 \times \left( dt < U_{\text{RDC}} \times \left( \frac{dU}{dt} \right)_{\text{rated}} \right)$$

$T$  is the pulse duration.

4. The maximum component surface temperature rise must be lower than the limits (see graph "Max. allowed component temperature rise").
5. Since in circuits used at voltages over 280 V peak-to-peak the risk for an intrinsically active flammability after a capacitor breakdown (short circuit) increases, it is recommended that the power to the component is limited to 100 times the values mentioned in the table: "Heat Conductivity"
6. When using these capacitors as across-the-line capacitor in the input filter for mains applications or as series connected with an impedance to the mains the applicant must guarantee that the following conditions are fulfilled in any case (spikes and surge voltages from the mains included).

<b>VOLTAGE CONDITIONS FOR 6 ABOVE</b>		
<b>ALLOWED VOLTAGES</b>	$T_{amb} \leq 85^{\circ}C$	$85^{\circ}C < T_{amb} \leq 105^{\circ}C$
Maximum continuous RMS voltage	$U_{RAC}$	See "Max. AC voltage as function of temperature" per characteristics
Maximum temperature RMS-overvoltage (< 24 h)	$1.25 \times U_{RAC}$	$U_{RAC}$
Maximum peak voltage ( $V_{O-P}$ ) (< 2 s)	$1.6 \times U_{RDC}$	$1.3 \times U_{RDC}$

**Example**

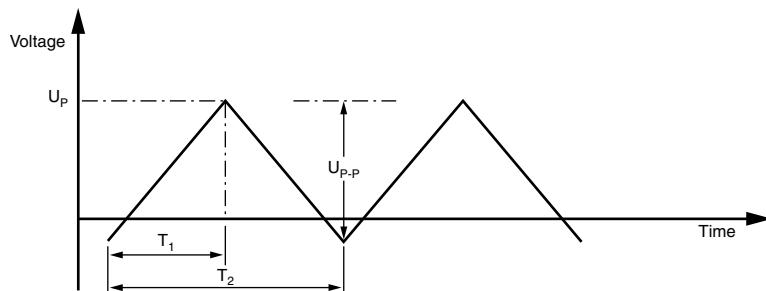

$C = 330 \text{ nF} - 63 \text{ V}$  used for the voltage signal shown in next drawing.

$U_{P-P} = 40 \text{ V}$ ;  $U_P = 35 \text{ V}$ ;  $T_1 = 100 \mu\text{s}$ ;  $T_2 = 200 \mu\text{s}$

The ambient temperature is  $35^{\circ}\text{C}$

Checking conditions:

1. The peak voltage  $U_P = 35 \text{ V}$  is lower than  $63 \text{ V}_{DC}$
2. The peak-to-peak voltage  $40 \text{ V}$  is lower than  $2\sqrt{2} \times 40 \text{ V}_{AC} = 113 \text{ U}_{P-P}$
3. The voltage pulse slope ( $dU/dt$ ) =  $40 \text{ V}/100 \mu\text{s} = 0.4 \text{ V}/\mu\text{s}$   
This is lower than  $60 \text{ V}/\mu\text{s}$  (see specific reference data for each version)
4. The dissipated power is  $16.2 \text{ mW}$  as calculated with fourier terms  
The temperature rise for  $W_{max.} = 3.5 \text{ mm}$  and pitch =  $5 \text{ mm}$  will be  $16.2 \text{ mW}/3.0 \text{ mW}/^{\circ}\text{C} = 5.4^{\circ}\text{C}$   
This is lower than  $15^{\circ}\text{C}$  temperature rise at  $35^{\circ}\text{C}$ , according figure "Max. allowed component temperature rise"
5. Not applicable
6. Not applicable

4.13 Charge and discharge	10 000 cycles Charged to $U_{RDC}$ Discharge resistance: $R = \frac{U_R}{C \times 2.5 \times (dU/dt)_R}$	
4.13.1 Initial measurements	Capacitance Tangent of loss angle: for $C \leq 470$ nF at 100 kHz for $470$ nF $< C \leq 10$ $\mu$ F at 10 kHz for $C > 10$ $\mu$ F at 1 kHz	
4.13.3 Final measurements	Capacitance  Tangent of loss angle  Insulation resistance	$ \Delta C/C  \leq 3$ % compared to values measured in 4.13.1  Increase of $\tan \delta$ ≤ 0.005 for: $C \leq 100$ nF or ≤ 0.010 for: $100$ nF $< C \leq 220$ nF or ≤ 0.015 for: $220$ nF $< C \leq 470$ nF and ≤ 0.003 for: $C > 470$ nF Compared to values measured in 4.13.1  ≥ 50 % of values specified in section "Insulation Resistance" of this specification

## Disclaimer

ALL PRODUCT, PRODUCT SPECIFICATIONS AND DATA ARE SUBJECT TO CHANGE WITHOUT NOTICE TO IMPROVE RELIABILITY, FUNCTION OR DESIGN OR OTHERWISE.

Vishay Intertechnology, Inc., its affiliates, agents, and employees, and all persons acting on its or their behalf (collectively, "Vishay"), disclaim any and all liability for any errors, inaccuracies or incompleteness contained in any datasheet or in any other disclosure relating to any product.

Vishay makes no warranty, representation or guarantee regarding the suitability of the products for any particular purpose or the continuing production of any product. To the maximum extent permitted by applicable law, Vishay disclaims (i) any and all liability arising out of the application or use of any product, (ii) any and all liability, including without limitation special, consequential or incidental damages, and (iii) any and all implied warranties, including warranties of fitness for particular purpose, non-infringement and merchantability.

Statements regarding the suitability of products for certain types of applications are based on Vishay's knowledge of typical requirements that are often placed on Vishay products in generic applications. Such statements are not binding statements about the suitability of products for a particular application. It is the customer's responsibility to validate that a particular product with the properties described in the product specification is suitable for use in a particular application. Parameters provided in datasheets and / or specifications may vary in different applications and performance may vary over time. All operating parameters, including typical parameters, must be validated for each customer application by the customer's technical experts. Product specifications do not expand or otherwise modify Vishay's terms and conditions of purchase, including but not limited to the warranty expressed therein.

Hyperlinks included in this datasheet may direct users to third-party websites. These links are provided as a convenience and for informational purposes only. Inclusion of these hyperlinks does not constitute an endorsement or an approval by Vishay of any of the products, services or opinions of the corporation, organization or individual associated with the third-party website. Vishay disclaims any and all liability and bears no responsibility for the accuracy, legality or content of the third-party website or for that of subsequent links.

Except as expressly indicated in writing, Vishay products are not designed for use in medical, life-saving, or life-sustaining applications or for any other application in which the failure of the Vishay product could result in personal injury or death. Customers using or selling Vishay products not expressly indicated for use in such applications do so at their own risk. Please contact authorized Vishay personnel to obtain written terms and conditions regarding products designed for such applications.

No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted by this document or by any conduct of Vishay. Product names and markings noted herein may be trademarks of their respective owners.
