

TA8884AN

RGB PROCESSOR IC

The TA8884AN is an RGB processor IC for digital-analog system color TV. TA8884AN organizes digital-analog TV system by combined with TC90A02F or TC90A06F (Digital VCD IC : TOSHIBA Product). Input signals are Luminance signal and color difference signals which have been demodulated by digital IC. And RGB primary color signals are outputted.

TA8884AN contains I²C bus, so various control and setting of various function can be digital-controlled through the bus line.

Weight : 5.44g (Typ.)

FEATURES

Video stage

- Super real transient
- Black expansion
- Luminance γ correction
- High-bright color
- DC restoration

Chroma stage

- Output of primary color signals
- Cut-off, drive adjustment
- Color detail emphasis
- Changing of relative phase and relative amplitude
- Color γ correction
- Automatic correction of flesh tone
- ACC circuit

RGB stage

- On screen display interface
- Analog RGB interface
- Fast blanking

BLOCK DIAGRAM

TERMINAL CONNECTION DIAGRAM

TERMINAL FUNCTION

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
1 2 3	DAC Output 1 DAC Output 2 DAC Output 3	The terminals for 1 bit DAC output. Controlled by I ² C bus. When the data is "1", this terminal's voltage is 0V.	
4	Test 1	The terminal for test of this IC. Please use this IC with this terminal open.	
5 54	B-Y Clamp R-Y Clamp	The terminals for a filter to clamp R-Y and B-Y signals. Pedestal levels of R-Y, B-Y and G-Y signal are made equal by the internal clamping circuit.	
6	I ² L V _{CC}	V _{CC} of I ² L circuit. Please supply 2.2V to this terminal.	—
7	Sand Castle Pulse Input	The terminal for input of sand castle pulse (Black peak detection pulse + clamp pulse). Threshold levels of B.P.D pulse and C. pulse are 2.1V and 3.5V.	
8	Blanking Pulse Input	The terminal for input of horizontal and vertical blanking pulse. Threshold levels of H.B. pulse and V.B. pulse are 4.0V and 1.4V.	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
9	I ² L GND	Ground of I ² L circuit.	—
10 11	SDA SCL	The terminals for I ² C bus input and output. Input threshold level is 2.3V.	
12	GND 3	Ground of RGB interface part, color-difference demodulation circuit and Digital/Analog Convertor.	—
13 14 15	R Output G Output B Output	The terminals for output of RGB primary color signals. Horizontal and vertical blanking signals are mixed with RGB signals.	
16	V _{CC} 3	V _{CC} of RGB interface part, color-difference demodulation circuit and Digital/Analog Convertor. Please supply 12V to this terminal.	—
17	OSD Y _S Input	The terminals for input of fast blanking signal for On Screen Display. Threshold level is 1.4V.	
18 19 20	OSD R Input OSD G Input OSD B Input	The terminals for input of RGB signals for OSD. Threshold levels are 1.4V. If Terminal 20 is connected with V _{CC} , it is test mode for this IC. Threshold level of test mode is V _{CC} - 0.7V.	
21	Video Mute	The terminal for input a signal to mute the video signal when combining this IC with AKB IC. Threshold levels of video mute (muting TV and Picture In Picture) and TV mute (muting only TV) are 2.8V and 1.4V.	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
22	Analog RGB Y_M Input	The terminal for input a signal to reduce the contrast of TV signal when Analog RGB signals superimpose upon TV signal. Threshold level is 1.4V.	
23	Analog RGB Y_S Input	The terminal for input of fast blanking signal for Analog RGB. Threshold level is 1.4V.	
24 25 26	Analog R Input Analog G Input Analog B Input	The terminals for input of Analog RGB signals. These are clamped by internal clamping circuit. Recommendable input levels are 1.0V _{p-p} .	
27	RGB Contrast	The terminal to control the contrast of Analog RGB signals.	
28	Uni-Color	The terminal for output of DAC to adjust Uni-Color and also for input of Automatic Contrast Limiter.	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
29	Brightness	The terminal for output of DAC to adjust Brightness and also for input of Automatic Brightness Limiter.	
30	Test 2	The terminal for test of this IC. If this terminal is connected with VCC, it is the test mode for this IC. Please use this IC with this terminal connected to GND.	
31	Y Clamp	The terminal for a filter to clamp Y signal. It is impossible to change DC restoration ratio by brightness control circuit because it is compensated by pin 42. It is fixed to 100%.	
32	Color	The terminal to fix time constant of Color Limiter. Please connect capacitor to this terminal.	
33 34	I/R-Y Input Q/B-Y Input	The terminals for input of I/R-Y and Q/B-Y signals from digital IC. Please input the signals through capacitors because the signals are clamped to standard voltage at the inside of this IC.	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
35	Monitor Output	The terminal to observe Y, R-Y, B-Y and G-Y signals. The signals are selected by I ² C bus.	
36	4MHz Ceramics	The terminal for 4MHz Ceramics resonator to adjust internal Delay Line.	
37	Filter Adjustment	The terminal for a filter to adjust delay time of internal Delay Line. The peak frequency of DL aperture correction is 4.0MHz when only capacitor is connected. To insert resistance between this terminal and GND makes peak frequency lower, between this and V _{CC} makes it higher.	
38	Y Output for Velocity Modulation	The terminal for output of Y signal to velocity modulation circuit. This Y signal is output after passing black expansion and γ correction circuit.	
39	V _{CC} 2	V _{CC} of video part and sharpness part. Please give 12V to this terminal.	—
40	Dynamic ABL Input	The terminal to supply control current for Dynamic ABL and Black Peak Level Correction. D. ABL and B.P.L.C. are the functions to shift the level of Y signal toward black side when the most black level is still whitish after black expansion.	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
41	Y Input	The terminal for input of Y signal. Recommendable input level is 1.0V _{p-p} (negative Sync). Because the pedestal level of Y signal is clamped at this terminal, please reduce the impedance of signal source.	
42	DC Restoration Ratio	The terminal to correct DC restoration ratio. DC restoration ratio is fixed by following expression. $T_{DC} = \frac{5k\Omega}{5k\Omega + R\Omega} \times 30 + 100 [\%]$ The smaller the external resistance R is, the larger the amount of correction is. With this terminal open, you can monitor the Y signal from which has been removed Sync signal and which has been done black expansion.	
43	Black Expansion Point	The terminal to fix black expansion start point. The higher voltage is supplied, the higher the start point is.	
44	Black Peak Hold	The terminal to control the gain of black expansion and of black level shift for Dynamic ABL. Resistance connected between this terminal and GND makes black expansion change. The smaller the resistance is, the larger the black area is.	
45	Chroma Input	The terminal for input of Chroma signal. Recommendable input level is 50mV _{p-p} .	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
46	GND 2	GND of video part and sharpness part.	—
47	ACC DC	The terminal to fix the gain of ACC Amp. The higher voltage is supplied (0~5V), the larger the gain is.	
48	Chroma Output	The terminal for output of Chroma signal which has been input to pin 45 and has passed ACC Amp.	
49	VCC 1	VCC of ACC part. Please supply 12V to this terminal.	—
50	Video Output	The terminal for output of Composite Video signal which has been input to pin 53. This signal is output after clamped to the level which is fixed by pin 52's voltage	
51	Clamp DC	The terminal to fix clamping level for Composite Video signal which has been input to pin 53. Please supply 0~5V to this terminal.	
52	GND 1	GND of ACC part.	—
53	Video Input	The terminal for input of Composite Video signal. Recommendable input level is 2V _{p-p} .

44	Color γ Characteristic	SW ₇	b	(1) Input signal 3 ($f_0 = 100kHz$, picture period amplitude : $0.2V_{p-p}$) to pin 33. (2) Set the data of sub-address (0F) to (0D). (3) Change picture period amplitude of signal 3. Measure each pin 35 output signal amplitude variation when setting the data of sub-address (0D) to (88) : γ OFF and (08) : γ ON. Then, describe the characteristic. (4) Calculate the point at which γ starts working (V_γ). Considering the inclination of straight line when γ OFF as 1, calculate the inclination of $\Delta\gamma$ when γ ON.
		SW ₈	a	
		SW ₃₃	b	
		SW ₃₄	a	
44	Color γ Characteristic	—	—	 The graph shows two curves: a straight line labeled γ_{OFF} and a curve labeled γ_{ON} that starts at a higher input level and has a steeper slope. The y-axis is labeled 'Output R-Y (V_{0-p})' and the x-axis is labeled 'Input I (V_{0-p})'. A dashed line from the origin intersects the γ_{ON} curve at a point labeled V_γ.

87	Analog RGB Brightness Adjustment Characteristic	Same as above		(1) Input signal 1 ($f_0 = 10kHz$, picture period amplitude : $0.3V_{p-p}$) to pin 41. Adjust drive adjustment data so that picture period amplitude of pin 14 and 15 can be equal to that of pin 13. (2) Input signal 2 to pin 24, pin 25 and 26. (3) Apply external supply 5V to pin 23. (4) Adjust amplitude A of signal 2 so that picture period amplitude of pin 13 can be $0.5V_{p-p}$. (5) Calculate picture period voltage of pin 13, 14 and 15 when changing the data of RGB contrast to (7F) : max., (40) : center and (00) : min. [V_{brTX1}^{MAX} , V_{brTX1}^{CNT} , V_{brTX1}^{MIN}] (6) Set the data of sub-address (05) to (C0). (7) Adjust amplitude A of signal 2 so that pin 13 picture period amplitude can be $1.5V_{p-p}$. (8) Calculate each picture period voltage of pin 13, 14 and 15 when changing the data of brightness to (FF) : max., (80) : center and (00) : min. [V_{brTX2}^{MAX} , V_{brTX2}^{CNT} , V_{brTX2}^{MIN}]
88	Analog RGB Brightness Sensitivity	Same as above		(1) $G_{brTX1} = (V_{brTX1}^{MAX} - V_{brTX1}^{MIN}) / 128$ (2) $G_{brTX2} = (V_{brTX2}^{MAX} - V_{brTX2}^{MIN}) / 256$
89	RGB Contrast Adjustment Characteristic	SW7	b	(1) Input signal 1 ($f_0 = 10kHz$, picture period amplitude : $0.3V_{p-p}$) to pin 41. Adjust the data of drive adjustment so that picture period amplitude of pin 14 and 15 can be equal to that of pin 13. (2) Apply external supply 5V to pin 23. (3) Input signal 1 ($f_0 = 100kHz$, picture period amplitude : $0.3V_{p-p}$) to pin 41. (4) Calculate pin 13 picture period voltage when changing the data of RGB contrast to (FF) : max., (40) : center and (00) : min. [$V_{uTX R}^{MAX}$, $V_{uTX R}^{CNT}$, $V_{uTX R}^{MIN}$] (5) $\Delta V_{uTX R} = 20 \log (V_{uTX R}^{MAX} / V_{uTX R}^{MIN})$ (6) Repeat (3) to (5) when pin 25 (input) pin 14 (measure), [$V_{uTX G}^{MAX}$, $V_{uTX G}^{CNT}$, $V_{uTX G}^{MIN}$, $\Delta V_{uTX G}$] and pin 26 (input) pin 15 (measure). likewise. [$V_{uTX B}^{MAX}$, $V_{uTX B}^{CNT}$, $V_{uTX B}^{MIN}$, $\Delta V_{uTX B}$]

- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc..
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer's own risk.
- The products described in this document are subject to the foreign exchange and foreign trade laws.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others.
- The information contained herein is subject to change without notice.
