

Monitoring, Controlling and Switching with SIRIUS Relays

One range for every application

SIRIUS

Answers for industry.

SIEMENS

The Wide Range of SIRIUS Relays

A relay for every application

Every engineer knows that he must be completely up to date when it comes to controls, load feeders and drives. However, with coupling, control and monitoring relays, the search for various suppliers becomes time-consuming. This is now a thing of the past because we have all of these products in just one family: SIRIUS®. This makes it easy for you to select the optimum product and guarantees you a top price-performance ratio.

In our assortment of SIRIUS relays, you can find everything you need for motor feeders. Simple and easy. From a single source. Whether you need timing or reliable monitoring relays, narrow coupling relays, plug-in relays, low-noise power relays or interface converters – it would be difficult to find a more complete and extensive range of relays. We have a relay for simply every application.

All SIRIUS relays are especially easy to use – across the product range. Please take a closer look at our range and see for yourself. You'll be quite impressed.

SIRIUS Relays – a complete range to cover every application.

The highlights at a glance:

- **An extensive range:**
A matching relay for every application
- **User-friendly:**
Extremely simple to operate
- **Multi-functional:**
Relays with a high degree of versatility
- **In line with requirements from practice:**
Actually graduated regarding the performance
- **Excellent price-performance ratio**

3RP15/3RP20 Timing Relays

for rail mounting

Electronic 3RP1/3RP2 timing relays are used for all switching operations in starting, protection and open- and closed-loop control circuits that require time delay functions. Due to their well-proven concept and their space-saving, compact design, they are the ideal timing devices for cabinet, panel and control manufacturers from all areas of industry.

Applications:

On delay:

- Noise pulses are suppressed
- Motors are started step by step to ensure that the line supply is not subject to excessive stress.

Off delay:

- Run-on functions are generated after the control voltage is removed (fan run-on)
- Gradually delayed disconnection of motors, fans, etc., for targeted system shutdown

Star/delta:

- Motors are changed-over from a star to a delta configuration with a fixed interval time of 50 ms in order to prevent short circuits between phases

Your advantages:

- Labels are used to document the function that has been set at multi-functional timing relays
- Transparent range for every application: only seven basic devices
- Considerable logistical advantages thanks to versions with wide voltage and wide time setting range
- Optimum price-performance ratio
- Positively-driven relay contacts can be used in safety-relevant circuits up to Category 2 according to DIN EN 954-1
- Hard-gold-plated relay contacts for optimum interaction with electronic controls
- Sealable cover to secure parameters that have been set
- All versions with removable terminals
- All versions with screw terminals or with the innovative spring-loaded terminal system

Engineering information:

- For the "clock-pulse" function, pulse and interval can be separately set, for the flashing function it is pulse and interval 1:1
- "Time addition" function (no holding on supply failure function) for the multi-function relays: by activating the start contact

Electronic 3RP15 timing relays in an industrial enclosure, 22.5 mm

3UG Monitoring Relays

for line, single-phase voltage and insulation monitoring

The 3UG4 monitoring relays provide a maximum degree of protection for machines, plants and systems. This means that line and voltage faults are detected early and the appropriate response is initiated before more significant damage can occur.

Configuration of a 3-phase monitoring function

Your advantages:

- Due to the wide voltage range it can be used on all line supplies around the world – from 160 V to 600 V – without an auxiliary voltage
- Can be set to overrange, underrange and window monitoring
- Freely parameterizable delay times and reset functions
- Narrow width for all versions for line and voltage monitoring
- For the digital versions, the actual value and fault type are displayed
- Automatic rotation direction correction by differentiating between line faults and incorrect phase sequence
- All versions have removable terminals
- All versions have either screw terminals or alternatively innovative spring-loaded terminals

Applications:

The applications are listed in the following table. These tables indicate the various equipment/system conditions that can be detected using the monitoring parameters.

Measured quantity	Possible plant or system fault
Phase sequence Phase failure	• Direction of rotation of the drive • A fuse has blown • Control supply voltage has failed • Single-phase operation of a motor with corresponding overheating
Phase dissymmetry	• Motor overheating as a result of non-symmetrical voltages or phase failure • Line supplies with non-symmetrical load are detected
Undervoltage	• A phase failure is detected in spite of regenerative feedback • Motor draws an increased current and in turn overheats • A device is undesirably reset • Detection of line supply dips, especially when supplied from a battery • Threshold value switch for analog signals 0 to 10 V
Overvoltage	• A plant is protected against destruction due to supply overvoltages • A plant or system switches-in above a certain voltage • Threshold value switch for analog signals 0 to 10 V
Insulation monitoring	• The insulation resistance for non-grounded plants and systems is monitored

¹⁾ Absolute limits²⁾ Return voltage due to coupling between the individual phases

The 3UG4511 device can not detect phase failures reliably.

Loads connected to the three-phase line supply – such as motor windings, lamps, transformers – result in a coupling between the individual phases. As a result of this coupling, there is always a return voltage at the equipment terminal of the phase that has failed.

3UG4 Monitoring Relays

for single-phase current, power factor and active current monitoring

3UG4 relays that monitor current, power factor and active current are ideal for monitoring the load of motors and the functionality of electronic loads. These devices detect the effect of wear and faults early on, thereby for example facilitating the timely implementation of maintenance measures to prevent system failures.

Your advantages:

- Wide-voltage versions reduce inventory stock levels
- Variable settings for overrange, under-range or window monitoring
- Freely parameterizable delay times and reset behavior
- Actual value and fault type are permanently displayed
- All versions have removable terminals
- All versions have screw terminals or innovative spring-loaded terminals

Current monitoring:

- Only two versions from 2 mA to 10 A
- Real effective value measurement
- Applicable for frequencies with 40–500 Hz AC and DC

Power factor and active current monitoring:

- Global application thanks to wide-range voltage between 90 and 690 V AC
- Capable of monitoring even small single-phase motors with a no-load running current below 0.5 A
- Easy identification of threshold values thanks to direct relationship between the measurement and the motor load
- Window monitoring and active current measurement allow for easy identification of cable breakage between control cabinet and motor as well as phase failure
- Monitoring of the motor load independent of the main voltage
- Selectable measuring principle power factor and/or I_{res} (active current)

Applications:

- The applications can be seen in the adjacent table. These tables show the various equipment/system states that can be detected using the monitoring parameters.

3UG4 monitoring relays – single-phase current monitoring

Measuring range	Hysteresis	Contacts	Starting-bypass time	Tripping delay	Rated control supply voltage V_s	Order No.
Width 22.5 mm, all devices digitally adjustable and with LC display, a fault memory that can be switched-in, simultaneous monitoring for current exceedance and shortfall over the entire measuring range

0.1–0.99 (cos φ)	0.2–10.0 A	0.1 (cos φ)	0.1–2.0 A	0–99 s	0.1–20.0 s	90–690 V AC	3UG4641-□CS20

¹⁾ Absolute limits

Screw terminal

1

Spring-loaded terminal

2

Monitoring parameter**Plant/system states****Current monitoring**

- Overload monitoring
- Underload monitoring close to the rated torque
- Monitoring the functionality of electric loads
- Wire breakage monitoring
- Energy management (phase current monitoring)
- Threshold value switch for analog signals up to 20 mA

Power factor and active current monitoring

- No-load monitoring
- Underload monitoring in the lower power range
- Overload monitoring
- Extremely simple power factor monitoring of line supplies to control compensation equipment
- Energy management
- Interrupted cable between the cabinet and the motor

Current and cos φ as a function of the motor load

Rule of thumb:

cos φ changes significantly below the rated load; the current increases overproportionally above the rated load.

The active current I_{res} indicates a linear correlation between the motor load and the measured value over the entire measuring range.

3UG4 Monitoring Relays

for residual-current monitoring

Over time, systems may experience insulation problems caused by humidity or severe contamination. These problems cause residual currents which may result in fatal system damage.

Using the 3UG4624 residual-current monitoring relay in combination with a 3UL22 summation current transformer, such hazards can be eliminated. Due to adjustable limit or warning threshold values, the relay issues a warning before the limit value is reached and switches off when the limit value is exceeded after a certain delay time.

Your advantages:

- Global applicability due to wide voltage range from 90 V AC to 690 V AC
- Variably adjustable threshold values for warning and disconnection
- Freely parameterizable delay times and reset behavior
- Permanent display of the actual value and fault diagnostics via display
- Removable terminal and optional screw terminal or innovative spring-loaded terminal
- High flexibility and space savings due to the converter's assembly outside the control cabinet

Application areas:

Monitoring of systems prone to residual currents, e. g. caused by:

- Dust deposits or humidity
- Porous cables and lines
- Capacitive residual currents

3UG4 monitoring relays – for residual-current monitoring

3UG4 Monitoring Relays

for level and speed

3UG4 monitoring relays also detect non-electrical parameters.

Our 3UG4501 level monitoring relays offer reliable 1- or 2-point regulations and alarm messages in case of overflow or dry running on the basis of a simple principle: Almost all liquids are conductive, which is utilized for the monitoring of filling levels. If the probes are immersed in the liquid, the current flows – if the probes fall dry, no current flows.

The 3UG4651 speed monitoring relays monitor the setpoint speed of motors for any exceedance of the upper or lower limit. Implementing a periodic continuous measuring, they monitor the pulses per rotation delivered to the sensors attached to the motor. Furthermore, the relays are suitable for all functions requiring the monitoring of a continuous pulse signal, e.g. belt operation and clock time monitoring or bypass control.

Level monitoring

Your advantages:

- Global applicability due to wide voltage range from 24 to 240 V AC/DC
- 2- and 3-pole wire electrodes for ease of mounting from the top/bottom which can be individually trimmed
- Bar-type electrodes for lateral mounting for higher filling levels and minimum space requirements
- Flexible adjustment to various conductive liquids due to analog sensitivity setting from 2 to 200 kOhm
- Compensation of wave movements due to tripping delay times from 0.1 to 10 seconds
- Selectable supply or discharge function
- All designs featuring removable terminals and optional screw terminals or innovative spring-loaded terminals

Application areas:

- 1- and 2-point level control
- Overflow protection
- Dry running protection
- Leakage monitoring

Speed monitoring

Your advantages:

- Global applicability due to wide voltage range from 24 to 240 V AC
- Variable adjustment to upper or lower limit exceedance or window monitoring
- Freely parameterizable delay times and reset behavior
- Permanent display of actual value or fault type
- Use of up to 10 sensors per rotation with extremely slowly rotating motors
- Two- or three-conductor sensors and sensors with mechanical switching or electronic output connectable
- Auxiliary voltage for sensor integrated
- All versions with removable terminal and optional screw connection or innovative spring-loaded terminal

Application areas:

- Slip/breakage of a belt drive
- Load shedding
- Standstill monitoring (no personal protection)
- Transport item monitoring for completeness

With enable input

3RN1 Thermistor Motor Protection

for overheating protection

Thermistor motor protection relays provide decisive advantages where current-dependent protection using either a circuit-breaker or an overload relay is not the ideal solution: In some cases, often as a result of external effects, overheating can occur without being detected by the thermal image in the circuit-breaker or an overload relay. Examples include heavy-duty starting (e.g. centrifuges), operation with AC drive converters or frequent switching, braking operations or when cooling is restricted, e.g. due to accumulated dirt.

Your advantages:

- The motor winding temperature is directly measured
- Only one relay is required for all motor power ratings
- Device/terminal labeling acc. to DIN EN 50005 for "standard" switching relays and for overload protective devices
- Relays with hard-gold-plated contacts for use under difficult conditions
- LEDs indicate wire breakage and short circuit in the sensor circuit
- Version with protective separation up to 300 V according to DIN/VDE 0106 as well as versions with bistable relay for special applications
- ATEX certification for gases and dust
- All versions with removable terminals
- All versions with screw terminals or alternatively with innovative spring-loaded terminals

Application areas:

- Protection of motors against overheating, particularly with heavy-duty starting, braking operation, frequent switching or insufficient cooling
- "Alarm and trip" function by using two sensor circuits with different response temperatures – this means that it is possible to respond before shutting-down (additional cooling can be switched-in, the load reduced, etc.)
- Multi-motor protection using only one device, e.g. for conveyor lines – for several motors that must be shutdown together

Thermistor motor protection relays for PTC thermistors (type A PTCs)

All of the devices with the exception of 24 V AC/DC have electrical isolation

Version	Reset	Contacts	Rated control supply voltage V _s	Order No.

3RS10/3RS11 Temperature Monitoring Relays

Analog adjustable relays

3RS10/11 relays are used to measure temperatures in solid, liquid and gaseous mediums. The temperature is measured using a sensor that is in the medium, evaluated by the unit and monitored to determine whether the temperature is within the upper and lower temperature limits. Depending on the function that has been parameterized, the output relay either switches on or off at these threshold values.

Your advantages:

- All devices have electrical isolation
Exception: 24 V AC/DC
- Simple handling using a rotary potentiometer
- Selectable hysteresis
- For devices with two threshold values, the operating principle can be selected
- All versions have removable terminals
- Many versions are available with innovative spring-loaded terminals

Application areas:

- Protecting motors and equipment/systems
- Monitoring temperatures in electrical cabinets
- Frost monitoring
- Temperature limits for process quantities – e. g. in the packaging industry or galvanizing systems
- Controlling plants and machines such as HVAC systems, solar collectors, heat pumps or warm water supply systems
- Bearing and gear oil temperature monitoring
- Monitoring cooling liquid

			24–240 V AC/DC	3RS11 21-1DW40

Analog adjustable evaluation devices with one and two threshold values. For analog adjustable devices, the threshold values and the hysteresis from 2 to 20% are set using a rotary potentiometer. For devices with 2 threshold values, the selectable hysteresis only acts on threshold value 1. For the second threshold value, the hysteresis is permanently set to 5%. This series of products was developed for applications where a setting accuracy of ± 5% is sufficient.

Screw terminal **1**
Spring-loaded terminal **2**

Under www.siemens.com/temperature, you will find the right sensor.

3RS10/3RS11 and 3RS20/3RS21 Temperature Monitoring Relays

Digitally adjustable relays

These relays are used to measure temperatures in solid, liquid and gaseous mediums. They monitor temperatures to evaluate whether they lie within a specific operating range (window function). The devices also present a good alternative to temperature controllers in the low-end range.

Your advantages:

- Simple to operate without complex menu prompting
- 2- or 3-conductor resistance sensors can be connected
- Versions available in °Fahrenheit
- All versions have removable terminals
- All versions with either screw terminals or with spring-loaded terminals

Applications:

- Protecting equipment and the environment
- Temperature monitoring for process quantities – e.g. in the packaging industry or galvanizing systems
- Temperature monitoring for heating systems
- Monitoring exhaust gas temperatures
- HVAC systems, solar collectors, heat pumps or warm-water supplies
- Motor, bearing and gear oil temperature monitoring
- Cooling liquids temperature monitoring

Characteristics of the most important resistance temperature sensors

Digitally adjustable evaluation units

Temperature monitoring relays distinguish themselves due to the fact that they are extremely easy to operate. The actual temperature is always displayed on the three-digit LED display. A dedicated relay with one NO contact is integrated to monitor the sensor. The relay is switched-off in the parameterizing mode. The following parameters can be set:

- Sensor type
- 2 threshold values J1, J2
- 1 hysteresis; this acts on both thresholds (0–99 K)
- 1 delay time; this acts on both thresholds (0–999 s)
- Either the open-circuit/closed-circuit principle can be selected
- Function: Overtemperature/undertemperature (overrange/underrange) or window monitoring within a defined range

Versions with a wide-range voltage have electrical isolation. The temperature ranges are dependant on the sensor type.

Under www.siemens.com/temperature, you will find the right sensor.

Coupling Relays – Narrow Design

3TX70 relay couplers

3TX70 relay couplers are available in two basic versions. The 3TX7004/05 is only 6.2 mm wide: taking up a lot less space in the electrical cabinet. Then there is the 3TX7002/03 series: These devices are suitable for mounting in small electrical cabinets with a low depth and short distances between the mounting rails. Both series are available with an extensive range of input and output couplers.

Your advantages: 3TX7002/03 and 3TX7004/05

- Operating range from 0.7 to 1.25 V_s at 24 V DC up to 60 °C
- Protective circuit is integrated in the input
- Connection comb and cable to connect voltages at the same potential
- Manual-0-automatic switch for easier commissioning

Your advantages: 3TX7014 and 3TX7015

- Plug-in relays that can be quickly replaced with preassembled wiring
- Conductors are introduced and clamped from the front – therefore shorter wiring times
- Tested, complete devices reduce installation times
- Individual relays are available as spare parts
- Relay version with hard-gold-plated contacts – therefore achieving a high contact reliability

Applications:

- Electrical isolation
- Voltage conversion – e. g. from 24 V DC to 230 V AC
- Signal amplification
- Contact multiplication
- General relay controls
- Overvoltage and EMC protection of controls

Engineering information:

When selecting the interface for rated control supply voltages of 110 V AC and 230 V AC, the maximum permissible cable length must be carefully observed. The special 3TX700-...05 relay can be used for longer cables.

Coupling relays as input or output coupler

3TX701 relay couplers, plug-in

Coupling Relays – Narrow Design

3TX70 semiconductor couplers

Coupling modules are available either with relays or semiconductors. Semiconductor couplers offer some significant advantages: The electronic components are extremely reliable and have a very long service life (refer to the diagram below). The input coupler combines the best of both worlds – improved technical features and a lower price. When considering output couplers, the question of “relay or semiconductor” needs to be taken into account as well as the making/breaking capacity and the number of operating cycles. If a relay has to be replaced just once during the complete lifetime of a machine, then a semiconductor coupler will have paid for itself.

Your advantages:

- Reliable input couplers with semiconductor output
- Graduated series of output couplers with semiconductors
- Extremely long electrical life
- Extremely high contact reliability
- High DC making/breaking capacity
- Short switching times

Applications:

- Providing electrical isolation, converting voltages
- Switching DC loads
- Switching capacity loads
- High number of switching cycles
- Overvoltage and EMC protection of controls

Use of semiconductor couplers

Comparison of lifetimes

Electronic coupling modules have a significantly higher lifetime than electromechanical devices.

3TX70 semiconductor couplers**3TX7004/05 – the narrow space saver – output couplers with semiconductor output, 1 NO contact**

Rated control supply voltage V_s	W x H x D in mm ¹⁾	Max. switching current	Switching Voltage	Min. load current	Short-time load capacity	M-0-A-switch	Order No.

Accessories

Connecting cable with 24 connecting points for 3TX70	3TX7004-8BA00
Connecting comb with 24 connecting points for 3TX7004, 6.2 mm width and screw connection	3TX7004-8AA00

Using the accessories it is easy to insert a jumper between the same voltage levels.

Coupling Relays with Industrial Housing

3RS18 relay couplers

The 3RS18 relay couplers set standards: With a wide voltage range extending from 24 V AC/DC to 240 V, they represent an outstanding highlight in the coupling market. All of these devices are built in a well-proven, rugged 22.5 mm wide housing. Relays with 1, 2 and 3 changeover contacts are available in both screw and spring-loaded terminal versions. These relays are also available in combination and wide-range voltage with hardgold-plated contacts for an especially high contact reliability – even at low current levels. Due to the proven, rugged housing, you can enjoy the benefits of user-friendly connection systems, with removable terminals – just the same as our timing relays. 2 conductors can be connected at each terminal point.

Screw terminal ①
Spring-loaded terminal ②

Your advantages:

- New, worldwide: One device for all voltages
- Lower costs due to fewer versions
- Especially high contact reliability even at low currents
- Removable terminals with screw terminals or alternatively with innovative spring-loaded terminals

Applications:

- Everywhere that contacts which are electronics-compatible are required and where devices with wide-range voltage are used
- Due to the hard-gold-plated contacts, predestined for PLC I/O

Coupling Relays with Plug-In Relays

LZS plug-in relay couplers

Plug-in relay couplers are available both as complete devices and as single modules¹⁾ for self-assembly or spare parts requirements. The range is divided into three designs: RT, PT and MT.

Your advantages:

- All designs with tried-and-tested screw terminals or push-in spring-loaded terminals
- Wiring without tools and vibration-proof connection due to innovative push-in spring-loaded terminals
- Socket with logical separation for ease of wiring
- Tested AC-15 and DC-13 switching capacity
- Available coil voltages: 24 V DC, 24 V AC, 115 V AC, 230 V AC
- Hard-gold-plated contacts for optimum interaction with electronic controls

Applications:

- As coupling relay to couple inputs and outputs for electronic controls
- Multiplying contacts
- Switching small loads
- As measured-value changeover switch

Engineering information:

The test lever of the PT relay does not feature a latching mechanism. If the level is pressed further until a movement of 90° is reached, two small lugs break off and the test lever can be set to latching. When using plug-in relays with voltages of 60 Hz AC, the lower response value has to be increased by 10 %, as the power loss slightly decreases.

LZX:PT 4 CO	4 A	5 A
LZX:MT 3 CO	5 A	2 A

Designs

LZS:RT
1 or 2 CO contacts
AC-1: 16/8 A
width: 15.5 mm

LZS:PT
2, 3 or 4 CO contacts
AC-1: 12/10/6 A
width: 28 mm

LZS:MT
3 CO contacts
AC-1: 10 A
width: 38 mm

1) Note: Order number for plug-in relay coupler as complete device or accessory starting with LZS; order number for plug-in relay as single module starting with LZX

Logical separation:

The connections of the contacts and the connections of the coil are arranged on different sides, e. g. contacts at the top and coils at the bottom. This allows for a clearer wiring arrangement. The logical separation is not necessarily a safe isolation.

Safe isolation:

The safe isolation is the isolation which prevents the passover of a circuit's voltage to another circuit with sufficient safety (DIN VDE 106 Part 101).

Plug-in relay couplers – LZS complete modules (socket, plug-in relay, hold/eject clip, LED module and inscription label)

3RS17 Interface Converters

Normalized signal and universal converters

Interface converters are mainly used to electrically isolate and convert analog signals. Sensors/actuators and controls generally have different power supply units, and therefore require electrical isolation in the signal circuit. This is either integrated in the control or is implemented using an interface converter.

A signal must be converted into another signal if, for instance, a voltage signal needs to be transmitted over a long distance as current signal – or if the output of a sensor and the input of a control system are not compatible with one another.

Frequency outputs can be used for an additional application. In this case, the input signal is converted into a proportional frequency. This means that analog signals can be processed with digital inputs. This is important if the control does not have provision for an analog input or if all of its analog inputs are already assigned. This can occur, for example, when devices are retrofitted.

Your advantages:

- Space-saving design
- Easy-to-set universal converter
- Converters with frequency output
- All ranges are fully calibrated
- Unified family of devices – the ideal solution for every application
- Integrated manual-automatic switch with adjustable setpoint
- Outputs are short-circuit-proof
- Up to 30 V – protected against damage caused by faulty wiring

Applications:

- Electrically isolating analog signals
- Converting analog signals
- Converting analog signals into a frequency
- Converting non-normalized into normalized signals
- Overvoltage protection for analog inputs

Engineering information:

Passive converters draw the power they require from the analog signal. They do not require their own power supply. For 2-way isolation, the input is electrically isolated from the output and from the power supply, output and power supply are at the same potential. For 3-way isolation, all of the three circuits are isolated from one another.

3TG10 Power Relays and SITOP Power Supplies

Wherever small, low-noise relays or contactors are required, the 3TG10 power relays come through with flying colors. At a low cost, these power relays are suitable for basic controls, and especially for use in large series equipment and control systems. They are ideal for applications which only need an auxiliary contact and not an overload relay – yet at the same time demand a higher making/breaking capacity, additional switching voltage and a longer lifetime.

Your advantages:

- Can be mounted in any position, hum-free
- Protective separation
- Can be screwed or inserted
- Integrated auxiliary contact
- AC-3 power: 4 kW/400 V
- Operating current I_e /AC-1: 20 A/400 V
- Inrush current per phase: 90 A
- Integrated overvoltage damping
- Slimline design, only 36 mm wide

Applications:

- Domestic appliances and installations
- Hoisting systems: Small elevators, elevating platforms
- Building services, hum-free devices in building systems, e. g. in hospitals

Engineering information:

When the three main current paths conduct 20 A, for $I > 10$ A for the fourth current path: Permissible ambient temperature is 40 °C.

Ordering

Easy download of catalogs and information material

The latest catalogs, customer magazines, brochures, demo software and special bargain packages are available for ordering or download from our Information and Download Center:
www.siemens.com/lowvoltage/catalogs

Newsletter

Always up to date: Our regular newsletter provides you with topical information on our industrial controls and power distribution products. Simply register at:
www.siemens.com/lowvoltage/newsletter

Configurators for ease of handling

Our configurator selection is available at:
www.siemens.com/lowvoltage/configurators

Online support

Reports and technical data sheets on our products can be found at:
www.siemens.com/lowvoltage/support

E-business

24/7-access to a comprehensive information and ordering platform for products and systems of the low-voltage controls and distribution portfolio? Comprehensive information on our complete portfolio? Product selection, order tracking, service, support and training information? All this can be conveniently found at our Mall at:
www.siemens.com/lowvoltage/mall

Commissioning / operation

Service

Training

Online support

Detailed technical information on our products and systems of the low-voltage controls and distribution portfolio, product support and further services and support based on helpful support tools can be found at:

www.siemens.com/lowvoltage/support

Technical Assistance

You are looking for the right product suit- ing your application? You have technical questions, require spare parts or want to localize a regional expert? Our experienced team of engineers and techni- cians will be pleased to assist you:

- Personally from Monday to Friday, 8.00 am to 5.00 pm (CET) via tele- phone support: **+49 911 895-5900**
- Via e-mail: **technical-assistance@siemens.com**
- Via fax: **+49 911 895-5907**

At

www.siemens.com/lowvoltage/technical-assistance,

you can also access the Siemens Service & Support Internet platform for Industry Automation and Drive Technologies. Here, you can search the FAQ database for information and solutions matching your task or directly send your questions to our technical consultants via the support request.

Training

Our training centers at numerous sites worldwide offer individual training pro- grams covering all fields of automation and industrial solutions. Moreover, with the help of our online courses and vari- ous learning software, you can acquire new know-how even more time- and cost-efficiently. More information on our comprehensive SITRAIN training pro- gram is available on the Internet at www.siemens.com/sitrain-cd

Or contact us personally:

- via information hotline: **+49 1805 25 36 11** or
- Fax: **+49 1805 23 56 12**

6EP1 SITOP Wide-Voltage Power Supply

The primary-clocked 6EP1 SITOP wide-voltage range power supplies in a narrow 22.5 mm housing were especially developed as controlgear for standard products if only “non-standard” power supply voltages are available and/or wide operating ranges of the supply voltage must be covered. These devices have a wide input voltage range and a 24 V DC output. This means that you can use standard devices for practically all of the power supply voltages used. The effect: You save costs for special versions and engineering time.

Your advantages:

- Only 22.5 mm wide
- Wide input voltage range
- Low weight
- High efficiency

6EP1 wide-voltage range power supply for rail mounting

Input voltage	Output voltage	Output current max.	Short-circuit- and overload-proof	Order No.
93–264 V AC	24 V DC	0.5 A	yes	6EP1331-2BA10
30–264 V DC	24 V DC	0.375 A	yes	6EP1731-2BA00

Applications:

- Voltage unit for all voltage ranges
- Voltage unit for wide operating ranges

Using SITOP as voltage unit
