EXTERNAL CLOCK CONNECTION

To minimize the noise pickup, it is recommended to connect 0.047μF capacitor to XTAL1, and keep the lead length of the capacitor to XTAL1 to a minimum to reduce noise susceptibility.

FREQUENCY SELECT CALCULATION

The ST49C101A-XX contains an analog phase locked loop circuit with digital closed loop dividers and a final output divider to achieve the desired dividing ratios for the clock output.

The accuracy of the frequencies produced by the ST49C101A-XX depends on the input frequency and divider ratios. The formula for calculating the exact output frequency is as follows (See Table 1.):

$$\text{OutputClock} = \text{Factor} \times \text{Input Frequency}$$
