RP15-A

15 Watt

1" x 1"

Single and Dual Output

Description

The RP15-A series are ultraminiature power DC/DC converters in a case half the size of industry standard 15W converters. Despite their small size, the RP15-A converters are fully specified devices with output currents up to 4 Amps, no minimum load, 1600VDC isolation and low ripple/noise figures. The outputs are also fully protected against short circuits, overcurrent and overvoltage. The RP15-A series will find many uses in applications where board space and/or board height is at a premium.

- Note1: Maximum values at nominal input voltage and full load
 Note2: Max. Cap load is tested at minimum Input and constant resistive load

Model Numbering

Notes:

- Note3: no suffix for standard part without Trim or CTRL pin
 add suffix "P" for CTRL function with positive logic (1=ON, 0=OFF) and Trim pin
 add suffix "N" for CTRL function with negative logic (0=ON, 1=OFF) and Trim pin
 Note4: add suffix "-HC" for premounted Heat-sink with clamps

Ordering Examples

RP15-2405SA/P = 24V input, 5V output, single, positive Logic CTRL pin
 RP15-4805DA-HC = 48V input, ±5V output, dual, without CTRL pin, Heat-sink premounted

OUTPUT VOLTAGE TRIMMING

Output Voltage Trimming

Single output Powerline converters offer the feature of trimming the output voltage over a certain range around the nominal value by using external trim resistors. No general equation can be given for calculating the trim resistors, but the following trimtables give typical values for choosing these trimming resistors. If voltages between the given trim points are required, extrapolate between the two nearest given values to work out the resistor required or use a variable resistor to set the output voltage. Output can be externally trimmed by using the method shown below.
