AZ100EL11

ECL/PECL 1:2 Differential Fanout Buffer

FEATURES

- RoHS Compliant / Lead (Pb) Free Packages available
- 265ps Propagation Delay
- 5ps Skew Between Outputs
- High Bandwidth Output Transitions
- 75k Ω Internal Input Pulldown Resistors
- Direct Replacement for ON Semiconductor MC10EL11 & MC100EL11

- 1 Add R1 at end of part number for 7 inch (1K parts), R2 for 13 inch (2.5K parts) Tape & Reel.
- 2 Date code format: "YY" or "YY" for year followed by "WW" for week on underside of part.

DESCRIPTION

The AZ10/100EL11 is a differential 1:2 fanout gate. The device is functionally similar to the E111 device but with higher performance capabilities. Having within-device skews and output transition times significantly improved over the E111, the EL11 is ideally suited for those applications that require the ultimate in AC performance.

The differential inputs of the EL11 employ clamping circuitry to maintain stability under open input conditions. If the inputs are left open (pulled to V_{EE}) the Q outputs will go LOW.

NOTE: Specifications in the ECL/PECL tables are valid when thermal equilibrium is established.

1. Within-device skew defined as identical transitions on similar paths through a device.
2. Duty cycle skew is the difference between a t_{PLH} and t_{PHL} propagation delay through a device.
3. V_{PP} is the minimum peak-to-peak differential input swing for which AC parameters are guaranteed. The device has a DC voltage gain of ≈ 40 .
4. The V_{CMR} range is referenced to the most positive side of the differential input signal. Normal operation is obtained if the HIGH level falls within the specified range and the peak-to-peak voltage lies between $V_{PP}(\text{min})$ and 1V.
