

Am25LS381/Am54LS381/Am74LS381

Am25LS2517

Arithmetic Logic Unit/Function Generator Low-Power Schottky Integrated Circuits

DISTINCTIVE CHARACTERISTICS

- Three arithmetic functions
- Three logic functions
- Preset and clear functions
- Carry output ($C_n + 4$) and overflow (OVR) outputs on Am25LS2517
- Generate and propagate outputs for full lookahead carry on Am25LS381
- 8mA sink current over the military temperature range on Am25LS
- 50mV Improved V_{OL} on Am25LS compared to Am54LS/74LS
- 440 μ A source current at HIGH output.

GENERAL DESCRIPTION

The Am25LS381 and Am54LS/74LS381 are arithmetic logic units (ALU)/function generators that perform three arithmetic operations and three logic operations on two 4-bit words. The device can also output forced 0000 (clear) or 1111 (preset). These eight operations are selected using three function select inputs S_0 , S_1 and S_2 as shown in the function table. Full carry lookahead is used over the four-bit field within the device. When devices are cascaded, multi-level full carry lookahead is implemented using a '182 carry lookahead generator and the $\bar{G}$ and $\bar{P}$ outputs on the Am25LS381 or Am54LS/74LS381. The device is packaged in a space-saving (0.3-inch row spacing) 20-pin package. If the $C_n + 4$ carry output function is required, the Am25LS2517 should be used.

The Am25LS381 is a high-performance version of the Am54LS/74LS381. Improvements include faster A.C. spec-

ifications, higher noise margin and twice the fan-out over the military temperature range.

The Am25LS2517 is an arithmetic logic unit (ALU)/function generator that performs three arithmetic operations and three logic operations on two 4-bit words. The device can also force output 0000 (clear) or 1111 (preset). These eight operations are selected using three function select inputs S_0 , S_1 and S_2 as shown in the function table. Full carry lookahead is used over the four-bit field within the device. When devices are cascaded, the carry output ($C_n + 4$) is connected to the carry input (C_n) of the next device. The Am25LS2517 can also detect two's complement overflow. The overflow output (OVR) is defined logically as $C_n + 3 \oplus C_n + 4$.

ORDERING INFORMATION

AMD products are available in several packages and operating ranges. The order number is formed by a combination of the following: Device number, speed option (if applicable), package type, operating range and screening option (if desired).

**Am25LS381
Am25LS2517**

D — Screening Option
Blank — Standard processing
B — Burn-in

C — Temperature (See Operating Range)
C — Commercial (0°C to +70°C)
M — Military (-55°C to +125°C)

B — Package
D — 20-pin CERDIP
F — 20-pin flatpak
L — 20-pin leadless Chip-Pak
P — 20-pin plastic DIP
X — Dice

ALU Function Generators

Valid Combinations

Am25LS381	PC, PCB DC, DCB, DM, DMB FM, FMB XC, XM
Am25LS2517	PC, PCB DC, DCB, DM, DMB FM, FMB LC, LM, LMB XC, XM

Valid Combinations

Consult the AMD sales office in your area to determine if a device is currently available in the combination you wish.

PIN DESCRIPTION

Pin No.	Name	I/O	Description
3, 1, 19, 17	A ₀ , A ₁ , A ₂ , A ₃	I	The A data inputs.
4, 2, 18, 16	B ₀ , B ₁ , B ₂ , B ₃	I	The B data inputs.
	S ₀ , S ₁ , S ₂ , S ₃	I	The control inputs used to determine the arithmetic or logic function performed.
	F ₀ , F ₁ , F ₂ , F ₃	O	The data outputs of the ALU.
16	C _n	I	The carry-in input of the ALU.
	C _n + 4	O	The carry-lookahead output of the four-bit input field.
13	$\bar{G}$	O	The carry-generate output for use in multi-level lookahead schemes.
14	$\bar{P}$	O	The carry-propagate output for use in multi-level lookahead schemes.
13	OVR		Overflow. This pin is logically the Exclusive-OR of the carry-in and carry-out of the MSB of the ALU. At the most significant end of the word, this pin indicates that the result of an arithmetic two's complement operation has overflowed into the sign-bit.

USER NOTES

- Throughout this data sheet, the active HIGH input and output terminology has been used.
- Arithmetic operations are performed on a word basis.
- Logic operations are performed on a bit basis.

4. Arithmetic in 1's complement notation requires an end around carry.

5. Subtraction in 2's complement notation requires a carry in (C_n = HIGH) for the active HIGH case.

Refer to Page 13-1 for Essential Information on Military Devices

ABSOLUTE MAXIMUM RATINGS

Storage Temperature -65°C to +150°C
 (Ambient) Temperature Under Bias -55°C to +125°C
 Supply Voltage to Ground Potential
 Continuous -0.5V to +7.0V
 DC Voltage Applied to Outputs For
 High Output State -0.5V to +V_{CC} max
 DC Input Voltage (Except Am25LS2517,
 C_N input = 5.5V) -0.5V to +7.0V
 DC Output Current, Into Outputs 30mA
 DC Input Current -30mA to +5.0mA

Stresses above those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent device failure. Functionality at or above these limits is not implied. Exposure to absolute maximum ratings for extended periods may affect device reliability.

OPERATING RANGES

Commercial (C) Devices

Temperature 0°C to +70°C
 Supply Voltage +4.75V to +5.25V

Military (M) Devices

Temperature -55°C to +125°C
 Supply Voltage +4.5V to +5.5V
Operating ranges define those limits over which the functionality of the device is guaranteed.

DC CHARACTERISTICS over operating range unless otherwise specified**Am25LS381 • Am25LS2517**

Notes: 1. Typical limits are at V_{CC} = 5.0V, 25°C ambient and maximum loading.
 2. For conditions shown as MIN or MAX, use the appropriate value specified under Operating Ranges for the applicable device type.
 3. Not more than one output should be shorted at a time. Duration of the short circuit test should not exceed one second.
 4. Test conditions: LS381: S₀ = S₁ = S₂ = GND, all other inputs open.
 LS2517: S₀ = C_N = open, all other inputs = GND.

DC CHARACTERISTICS over operating range unless otherwise specified
AM54LS/74LS381

Parameters	Description	Test Conditions (Note 2)	Min	Typ (Note 1)	Max	Units
V _{OH}	Output HIGH Voltage	V _{CC} = MIN, I _{OH} = -400µA V _{IN} = V _{IH} or V _{IL}	MIL 2.5 COM'L 2.7	3.4 3.4		Volts
V _{OL}	Output LOW Voltage	V _{CC} = MIN V _{IN} = V _{IH} or V _{IL}	I _{OL} = 4.0 mA 74LS only, I _{OL} = 8mA P, I _{OL} = 8.0mA G, I _{OL} = 16mA		0.4 0.5 0.5 0.65	Volts
V _{IH}	Input HIGH Level	Guaranteed input logical HIGH voltage for all inputs	2.0			Volts
V _{IL}	Input LOW Level	Guaranteed input logical LOW voltage for all inputs.	MIL COM'L		0.7 0.8	Volts
V _I	Input Clamp Voltage	V _{CC} = MIN, I _{IN} = -18mA			-1.5	Volts
I _{IL}	Input LOW Current (Note 5)	V _{CC} = MAX, V _{IN} = 0.4V	Any S Others		-0.4 -1.6	mA
I _{IH}	Input HIGH Current (Note 5)	V _{CC} = MAX, V _{IN} = 2.7V	Any S Others		20 80	µA
I _I	Input HIGH Current (Note 5)	V _{CC} = MAX, V _{IN} = 7.0V	Any S Others		0.1 0.4	mA
I _{SC}	Output Short Circuit Current (Note 3)	V _{CC} = MAX	-15		-100	mA
I _{CC}	Power Supply Current (Note 4)	V _{CC} = MAX		25	43	mA

- Notes: 1. Typical limits are at V_{CC} = 5.0V, 25°C ambient and maximum loading.
2. For conditions shown as MIN or MAX, use the appropriate value specified under Operating Ranges for the applicable device type.
3. Not more than one output should be shorted at a time. Duration of the short circuit test should not exceed one second.
4. Test conditions: LS381: S₀ = S₁ = S₂ = GND, all other inputs open.
LS2517: S₀ = C_n = open, all other inputs = GND.
5. Limits chosen by AMD based on SN545/74S381, T, I, LS data unavailable.

SWITCHING CHARACTERISTICS (T_A = +25°C, V_{CC} = 5.0V)
