1,048,576 WORD ×4 BIT DYNAMIC RAM

* This is advanced information and specifications are subject to change without notice.

DESCRIPTION

The TC514400APL/AJL/ASJL/AZL is the new generation dynamic RAM organized 1,048,576 words by 4 bits. The TC514400APL/AJL/ASJL/AZL utilizes TOSHIBA's CMOS Silicon gate process technology as well as advanced circuit techniques to provide wide operating margins, both internally and to the system user. Multiplexed address inputs permit the TC514400APL/AJL/ASJL/AZL to be packaged in a standard 20 pin plastic DIP, 26/20 pin plastic SOJ (300/350mil) and 20 pin plastic ZIP. The package size provides high system bit densities and is compatible with widely available automated testing and insertion equipment. System oriented features include single power supply of 5V±10% tolerance, direct interfacing capability with high performance logic families such as Schottky TTL.

FEATURES

- 1,048,576 word by 4 bit organization
- Fast access time and cycle time

|		TC514400APL/AJL/ASJL/AZL – 60
t_{RAC}	RAS Access Time	60ns
t_{AA}	Column Address Access Time	30ns
t_{CAC}	CAS Access Time	20ns
t_{RC}	Cycle Time	110ns
t_{PC}	Fast Page Mode Cycle Time	45ns

- Single power supply of 5V±10% with a built-in V_{BB} generator

- Low Power
  660mW MAX. Operating
  (TC514400APL/AJL/ASJL/AZL – 60)
  1.1mW MAX. Standby
- Outputs unlatched at cycle end allows two-dimensional chip selection
- Read-Modify-Write, CAS before RAS refresh, RAS-only refresh, Hidden refresh, and Fast Page Mode and Test Mode capability
- All inputs and outputs TTL compatible
- 1024 refresh cycles/128ms
- Package   TC514400APL : DIP20-P-300C
            TC514400AJL : SOJ26-P-350
   TC514400ASJL: SOJ26-P-300A
            TC514400AZL : ZIP20-P-400A

PIN NAMES

A0~A9	Address Inputs	OE	Output Enable
RAS	Row Address Strobe	I/O1~I/O4	Data Input/Output
CAS	Column Address Strobe	V_{CC}	Power (+5V)
WRITE	Read/Write Input	V_{SS}	Ground

PIN CONNECTION (TOP VIEW)

CAPACITANCE ($V_{CC} = 5V \pm 10\%$, $f = 1MHz$, $Ta = 0 \sim 70°c$)

| SYMBOL	PARAMETER	MIN.	MAX.	UNIT
C_{I1}	Input Capacitance (A0~A9)	–	5	pF
C_{I2}	Input Capacitance ($\overline{RAS}$, $\overline{CAS}$, $\overline{WRITE}$, $\overline{OE}$)	–	7	pF
C_O	Input/Output Capacitance (I/O1~I/O4)	–	7	pF

NOTES:

1. Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device.

2. All voltages are referenced to V_{SS}.

3. I_{CC1}, I_{CC3}, I_{CC4}, I_{CC6}, I_{CC7} depend on cycle rate.

4. I_{CC1}, I_{CC4} depend on output loading. Specified values are obtained with the output open.

5. Column address can be changed once or less while $\overline{RAS} = V_{IL}$ and $\overline{CAS} = V_{IH}$.

6. $t_{RAS}(\text{max.}) = 1\mu s$ is only applied to refresh of battery-back up. $t_{RAS}(\text{max.}) = 10\mu s$ is applied to functional operating.

7. An initial pause of 200µs is required after power-up followed by 8 $\overline{RAS}$ only refresh cycles before proper device operation is achieved. In case of using internal refresh counter, a minimum of 8 $\overline{CAS}$ before $\overline{RAS}$ refresh cycles instead of 8 $\overline{RAS}$ only refresh cycles are required.

8. AC measurements assume $t_T = 5ns$.

9. V_{IH} (min.) and V_{IL} (max.) are reference levels for measuring timing of input signals. Also, transition times are measured between V_{IH} and V_{IL}.

10. Measured with a load equivalent to 2 TTL loads and 100pF.

11. t_{OFF} (max.) and t_{OEZ} (max.) define the time at which the output achieves the open circuit condition and are not referenced to output voltage levels.

12. Either t_{RCH} or t_{RRH} must be satisfied for a read cycle.

13. These parameters are referenced to $\overline{CAS}$ leading edge in early write cycles and to $\overline{WRITE}$ leading edge in Read-Modify-Write cycles.

14. t_{WCS}, t_{RWD}, t_{CWD}, t_{AWD} and t_{CPWD} are not restrictive operating parameters. They are included in the data sheet as electrical characteristics only. If $t_{WCS} \geq t_{WCS}$ (min.), the cycle is an early write cycle and the data out pin will remain open circuit (high impedance) through the entire cycle; If $t_{RWD} \geq t_{RWD}$ (min.), $t_{CWD} \geq t_{CWD}$ (min.), $t_{AWD} \geq t_{AWD}$ (min.) and $t_{CPWD} \geq t_{CPWD}$ (min.) (Fast Page Mode), the cycle is a Read-Modify-Write cycle and the data out will contain data read from the selected cell: If neither of the above sets of conditions is satisfied, the condition of the data out (at access time) is indeterminate.

15. Operation within the t_{RCD} (max.) limit insures that t_{RAC} (max.) can be met. t_{RCD} (max.) is specified as a reference point only: If t_{RCD} is greater than the specified t_{RCD} (max.) limit, then access time is controlled by t_{CAC}.

16. Operation within the t_{RAD} (max.) limit insures that t_{RAC} (max.) can be met. t_{RAD} (max.) is specified as a reference point only: If t_{RAD} is greater than the specified t_{RAD} (max.) limit, then access time is controlled by t_{AA}.

TEST MODE

The TC514400APL/AJL/ASJL/AZL is the RAM organized 1,048,576 words by 4 bits, it is internally organized 524,288 words by 8 bits. In "Test Mode", data are written into 8 sectors in parallel and retrieved the same way. Aoc is not used. If, upon reading, two bits on one I/O pin are equal (all "1"s or "0"s), the I/O pin indicates a "1".

If they were not equal, the I/O pin would indicate a "0". Fig.1 shows the block diagram of TC514400APL/AJL/ASJL/AZL. In "Test Mode", the 1M×4 DRAM can be tested as if it were a 512K×4 DRAM.

"WRITE, $\overline{CAS}$ Before $\overline{RAS}$ Refresh Cycle" puts the device into "Test Mode". And "$\overline{CAS}$ Before $\overline{RAS}$ Refresh Cycle" or "$\overline{RAS}$ Only Refresh Cycle" puts it back into "Normal Mode". In the Test Mode, "WRITE, $\overline{CAS}$ Before $\overline{RAS}$ Refresh Cycle" Performs the refresh operation with the internal refresh address counter. The "Test Mode" function reduces test times (1/2 in case of N test pattern).
