General Information

APPLICATIONS

General purpose function in low voltage applications where miniaturization and SMD is required. Typical applications would be:

- Automotive (Airbag, Fuel injection calculator, ...).
- Telecom (Public switching systems, modems, telephone sets, cordless, mobile).
- Industrial (SMPS, Power converter modules, ...).

DESCRIPTION

Film chip capacitor using a naked and stacked construction with metallized High Temperature PET (polyethylene terephthalate).

ADVANTAGES

- Use of high temperature dielectric films makes these capacitors suitable for IR or vapor phase reflow processes. This chip is built without specific encapsulation.
- The intrinsic elasticity of the dielectric film allows an excellent compatibility of the capacitor with all types of material for printed circuit boards.
- The self-healing property of film technology results in safe open circuit failure mode and better overall reliability.
- Excellent thermal shock resistance.
- Low dissipation factor, ESR and ESL.
- No piezoelectric effect.
- Available in tape and reel suitable for automatic placement.
- Non-polar construction.

TAPE AND REEL DIMENSIONS

The CF Series is available in bulk or tape and reel for automatic insertion.

TAPE AND REEL CHARACTERISTICS

In accordance with IEC 286 and EIA 481, the material used:

Carrier tape: Antistatic Material

Cover tape: Polyester

Reel: Recyclable Material

Parts in bulk or on reel are packed in hermetically sealed plastic bags.

RECOMMENDATIONS

Once the bag is open, the capacitors must be kept in a dry atmosphere: $25^{\circ}\pm 5^{\circ}\text{C}$ and R.H. $\leq 60\%$ until soldering and during maximum 3 months.

The use-by date is 3 years if kept in origin plastic bags.

In case of bad storage the following recommendations must be applied: in order to eliminate the humidity level in the CF product after storage out of the vacuum bag, the drying of the pieces can be realized during 48 hours at 80°C .

Mounting and Soldering Recommendations

TEMPERATURE SOLDERING PROFILE

For infrared and vapor phase reflow soldering, the temperature profile below shows the times and the temperatures

operating limits. These capacitors are NOT suitable for wave soldering.

Phase	Temperature (°C) *	Time (s)
Preheating	160 to 180°C max.	180s max.
Soldering	180 to 235°C max.	30s max.

*Temperature at capacitor surface

RECOMMENDED SOLDER PASTE THICKNESS

To allow optimum solderability, the recommended soldering paste thickness is: 150 to 200 µm for 1206 to 2824
200 to 300 µm for 4030 to 6054

In case of hand soldering, the temperature of the soldering iron should not be above 250°C. Special care must be taken to avoid touching the capacitor body with the iron tip.

RECOMMENDED CLEANING

To clean flux from the PC board assembly, the recommended products are: ethanol, isopropyl alcohol, and deionized water wash. The cleaning products to avoid are: Toluene, Xylene, Trichloroethylene, Terpene Cleaner EC-7, surface active agent.

In case of using another solvent, please contact us.

OTHER CAUTIONS

Flame retardancy: the dielectric film is not a flame retardant material.

Environment: contact us when chips are used in humid or gas atmosphere and/or when using with resin.

Recommended handling: do not use edged tools, so not to damage the capacitor.
